Re: Blue Cross and Blue Shield of Vermont  
2014 BCBSVT Charge Factors for ASL and Risk & Admin Charge Filing  
SERFF Tracking #: BCVT-129373971

Dear Jude Daye:

We have been retained by the Green Mountain Care Board (“GMCB”) to review the above referenced group products filing submitted on 1/14/2014. The following additional information is required for this filing.

Notice regarding proper responses:

- A minimum-acceptable response to quantitative questions from us must include a spreadsheet calculation with retained formulas such that we can replicate the calculations therein.
- Explanatory responses are merely a supplement to the spreadsheet material and in of themselves will constitute a lack of response

1. Why were the Milliman Health Cost Guidelines trended to Q1 2015, rather than July 1 2015?

2. The memorandum jumps from “the expected claims amount and standard deviation of the distribution of claims less than the specific stop loss levels” on page 1 to the “expected aggregate claims” on page 2.
  - a. How was the distribution of individual claims used to estimate the aggregate claims?
  - b. Please provide the relevant sections of VFN 41126, Method of Determination of ASL Charge Factors
3. Please provide quantitative and qualitative support for the factors on the bottom of page 2 of the actuarial memorandum to adjust for uncertainty in the projection of expected claims.
4. Provide quantitative support for the additional risk charges to protect against default situations.
5. Please provide quantitative support that demonstrates the reasonableness of interpolating results for a group with 150 members for the aggregate stop loss factors and the experience refund risk charge factors.
6. How was the 2013 settlement administration charge of \$1,600 calculated?
7. What is the investment income adjustment used for?

Please be aware that we expect to have further questions regarding the filing as the review continues.

To ensure that the review of your filing has been completed before statutory deadlines, we expect you to respond as expeditiously as possible to every objection in our letter, but no later than February 5, 2014. Note that the responses can be submitted separately and do not have to be submitted all at the same time.

We trust that you understand these forms may not be used in Vermont until they are formally approved by the GMCB.

Sincerely,

Josh Hammerquist A.S.A., M.A.A.A.

Re: Blue Cross and Blue Shield of Vermont  
2014 BCBSVT Charge Factors for ASL and Risk & Admin Charge Filing  
SERFF Tracking #: BCVT-129373971

Dear Jude Daye:

We have been retained by the Green Mountain Care Board (“GMCB”) to review the above referenced group products filing submitted on 1/14/2014. The following additional information is required for this filing.

1. Please submit the SERFF PDF Pipelines with all communications for the previously approved version of this filing and the filing that is referenced specifically in the Actuarial Memorandum.
2. Provide the historical experience for the aggregate stop loss block of business.
3. Based on the current sales distribution, what is the average change in the updated factors?

Please be aware that we expect to have further questions regarding the filing as the review continues.

To ensure that the review of your filing has been completed before statutory deadlines, we expect you to respond as expeditiously as possible to every objection in our letter, but no later than January 21, 2014. Note that the responses can be submitted separately and do not have to be submitted all at the same time.

We trust that you understand these forms may not be used in Vermont until they are formally approved by the GMCB.

Sincerely,

A handwritten signature in black ink that reads "Josh Hammerquist". The signature is written in a cursive, slightly slanted style.

**Blue Cross and Blue Shield of Vermont  
2014 Filing  
Charge Factors for Aggregate Stop Loss  
Risk & Administration Charges for Experience Refund Eligible Product  
Actuarial Memorandum**

**SUMMARY**

The purpose of this filing is to:

1. reprice our Aggregate Stop Loss coverage offerings to our Cost Plus groups, and
2. reprice the risk and administration charge factors to be used in the development of rates for Experience Refund Eligible plans.

Blue Cross and Blue Shield of Vermont (BCBSVT) will apply the new factors in the determination of rates for groups with 50 or more subscribers that are renewing or applying for coverage under Cost Plus or Experience Refund Eligible plans with BCBSVT delivered 10 or more business days after the date of approval of this filing through 10 business days after the approval of a successor filing.

The method used is based on VFN 41126, Method of Determination of Aggregate Stop Loss Charge Factors. For the determination of the risk charge factors to be used in the development of rates for Experience Refund Eligible plans, the loadings for expected loss ratio and for default (i.e. for the risk of the group failing to fund claims) do not apply.

**Distribution of Individual Claims by Amount**

The distribution of individual claims by amount was generated from the 2013 Milliman Health Cost Guidelines distribution of allowed charges (adjusted for VT) by trending the distribution to produce the same expected average annual allowed charge per member as the trended BCBSVT distribution for Q1 2015 (developed as part of the determination of the BCBSVT Provision for Large Claims and Stop Loss filing<sup>1</sup>), and then applying paid/allowed factors (also from that filing).

For each specific stop loss level, the expected claims amount and standard deviation of the distribution of claims less than the specific stop loss level are calculated.

---

<sup>1</sup> See page 3 of “Blue Cross and Blue Shield of Vermont, Provision for Large Claims and Stop Loss Filing for 2014, Actuarial Memorandum”, filed concurrently with this filing.

**Blue Cross and Blue Shield of Vermont  
2014 Filing  
Charge Factors for Aggregate Stop Loss  
Risk & Administration Charges for Experience Refund Eligible Product  
Actuarial Memorandum**

**Expected Claims Factors**

For each number of members (N) in the following table:

N
100
200
300
400
500
600
700
800
900
1,000
1,500
2,000
3,000
4,000
5,000
10,000
20,000
30,000
40,000

and for each ISL limit, a preliminary expected fraction of aggregate claims in excess of 90%, 95%, 100%, 105%, 110%, 115%, 120%, 125%, 130%, 135%, and 140% of expected aggregate claims was calculated. These were then adjusted for uncertainty in the projection of expected claims as described in the table below:

Expected to projected expected	>107.5%	107.5% - 102.5%	102.5% - 97.5%	97.5% - 92.5%	< 92.5%
Fraction of projections	F <sub>1</sub> (Estimated from distribution)	F <sub>2</sub> (Estimated from distribution)	F <sub>3</sub> (Estimated from distribution)	F <sub>4</sub> (Estimated from distribution)	F <sub>5</sub> (Estimated from distribution)
Assumed (Actual expected) / (projected expected) factor	1.1	1.05	1.00	0.95	0.90
Weighting Factor for averaging	F <sub>1</sub> /1.1	F <sub>2</sub> /1.05	F <sub>3</sub>	F <sub>4</sub> /.95	F <sub>5</sub> /0.9

**Blue Cross and Blue Shield of Vermont  
2014 Filing  
Charge Factors for Aggregate Stop Loss  
Risk & Administration Charges for Experience Refund Eligible Product  
Actuarial Memorandum**

**CHARGE FACTORS FOR AGGREGATE STOP LOSS**

The factors developed above were then divided by 0.7 to produce an expected loss ratio (net of the provision for default) of 70%.

To protect BCBSVT against potential default situations (i.e. to cover the risk of the group failing to fund claims), the proposed ASL rates include an additional fixed risk charge of 0.5% of expected claims under the ISL limit for groups with less than 20,000 members, and a reduced fixed risk charge of 0.4% of expected claims under the ISL limit for groups of 20,000 members or more.

To assure that the factors on each line were strictly decreasing with increasing stop loss percentage, in cases where the ratio for a 130% stop loss percentage was less than 0.0001:

- the calculated value for 130% was increased by 0.00001
- the calculated value for 125% was increased by 0.00002
- the calculated value for 120% was increased by 0.00003
- the calculated value for 115% was increased by 0.00004
- the calculated value for 110% was increased by 0.00005.

The resulting factors were then multiplied by ratios of claims under the limit to total claims at the various ISL limits. Thus the final factors are applicable to total expected claims, as is required for use in the approved BCBSVT rating formula<sup>2</sup>.

The tables of factors are contained in the **ASL Factors.pdf** file that accompanies this filing.

If the expected number of members (N) in the rating period is not one of the values in either table, the value is determined by interpolating linearly between the entries in the table for the numbers of members immediately below and above N.

**RISK & ADMINISTRATION CHARGES FOR EXPERIENCE REFUND ELIGIBLE PRODUCT**

**Risk Charges for Experience Refund Eligible Plans**

The BCBSVT Experience Refund Eligible products involve pricing margins of 10% or 5% (i.e. expected claims below the ISL limit will be increased by 10% or 5% in the determination of the premium). The risk charge factors are developed in the same way as the ASL factors, except that the loadings for the 70% expected loss ratio and for default (the charges of either 0.5% or 0.4% of expected claims) do not apply. These factors are applied to total expected claims (before adjustment for pricing margin) and the retention is increased by the risk charge (both in the prospective pricing and in the refund calculation).

The tables of factors are contained in the **Risk Charge Factors.pdf** file that accompanies this filing.

---

<sup>2</sup> See "Blue Cross and Blue Shield of Vermont, Group Merit Rating Program" filing, SERFF # BCVT-128267446, VFN 59619.

**Blue Cross and Blue Shield of Vermont  
2014 Filing  
Charge Factors for Aggregate Stop Loss  
Risk & Administration Charges for Experience Refund Eligible Product  
Actuarial Memorandum**

If the expected number of members (N) in the rating period is not one of the values in either table, the value is determined by interpolating linearly between the entries in the table for the numbers of members immediately below and above N.

**Administration Charge**

An administration charge equal to a settlement administration charge, offset by an investment income credit, will be made.

1. Settlement Administration Charge: An additional administrative charge of **\$1,625** will be included to offset the costs of administering the retrospective arrangement. This amount is based on the 2013 settlement administration charge of \$1,600 increased by 1.6%<sup>3</sup> trend to reflect the assumed increase for the direct staff cost.
2. Investment Income Adjustment:

Margin factor	Investment Income adjustment factor (applicable to expected claims below the ISL limit)
10%	0.4%
5%	0.2%

**ACTUARIAL CERTIFICATION**

I am a Fellow of the Society of Actuaries, a Member of the American Academy of Actuaries, and I meet the Academy's qualification standards for rendering opinions with regard to health rate filings.

Based on my review of the block's underlying experience and methods applied, it is my opinion that the rate factors set forth in this filing are adequate and are neither excessive nor unfairly discriminatory.

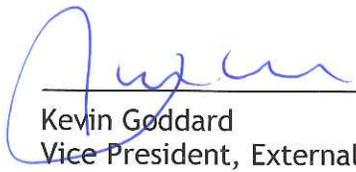

Paul Schultz, F.S.A., M.A.A.A.

January 9, 2014

<sup>3</sup> The 1.6% trend factor is based on a two-year regression of the CPI data values (Source: [Bureau of Labor Statistics Data](#), CPI - All Urban Consumers, Northeast Urban, All Items, 1982-1984=100, data through October 2013) for October 2011 through October 2013.

I HEREBY CERTIFY that I have reviewed the applicable filing requirements for this filing, and, to the best of my knowledge, the filing complies with all applicable statutory and regulatory provisions for the state of Vermont

**Blue Cross and Blue Shield of Vermont**  
**2014 Factor Filing**  
**Plain Language Summary**

The purpose of this filing is to reprice the Blue Cross and Blue Shield of Vermont (BCBSVT) Aggregate Stop Loss (ASL) coverage offerings to Cost Plus groups, and to reprice the risk and administration charge factors to be used in the development of rates for Experience Refund Eligible plans. These factors are applied as part of the BCBSVT Group Merit Rating formula, approved in a separate filing.

Aggregate stop loss is an insurance mechanism designed to protect plan sponsors in the event that total health care claims are higher than expected. Loss ratios for aggregate stop loss tend to be lower than those for comprehensive health coverage because stop loss is protecting against a relatively unlikely event (namely, that total claims exceed expectation by a given amount); therefore, aggregate stop loss claims will experience a great deal of year-to-year fluctuation. Since Cost Plus groups are not responsible for claims above a selected percentage of expected claims (the aggregate stop loss attachment point), best estimate ASL rates are modified to produce a reasonable loss ratio for this type of business.

Risk charge factors are similar in concept and development to aggregate stop loss factors, but are applied differently. Because pricing margins for Experience Refund Eligible plans are included within the expected claim development, risk charge factors are unmodified from their best estimate values.

Charge factors for aggregate stop loss arrangements and risk charges for refund eligible arrangements are developed through the calibration of 2013 Milliman Health Cost Guidelines to expected Vermont claims levels, using factors from the most recently approved trend filings as the key input item.

Default risk charges for Cost Plus groups and administrative charges specific to Experience Refund Eligible plans are also documented within this filing.

January 21, 2014

Mr. Josh Hammerquist, A.S.A., M.A.A.A.  
Assistant Vice President & Consulting Actuary  
Lewis & Ellis, Inc.

**Subject: Your 01/17/2014 Questions re: Blue Cross and Blue Shield of Vermont  
2014 BCBSVT Charge Factors for ASL and Risk & Admin Charge Filing  
(SERFF Tracking #: BCVT-129373971)**

Dear Mr. Hammerquist:

In response to your request dated January 17, 2014, here are *your questions* and our answers:

*1. Please submit the SERFF PDF Pipelines with all communications for the previously approved version of this filing and the filing that is referenced specifically in the Actuarial Memorandum.*

Please find attached the SERFF PDF Pipelines for:

- BCVT-128846582 - BCBSVT 2013 Charge Factors for ASL and Risk & Admin Charge Filing

*2. Provide the historical experience for the aggregate stop loss block of business.*

The experience for the most recently-settled contract period for Cost Plus customers is as follows:

ASL Claims Payments	ASL Premium	Loss Ratio
\$61,020	\$34,193	178%

As understood from principles of stop loss coverage and further demonstrated by the above chart, claims experience can fluctuate widely from year to year. It is important to employ an actuarially sound methodology in developing aggregate stop loss factors, rather than reacting strongly to short-term results. For instance, we are proposing a modest decrease in our aggregate stop loss factors (based on the current sales distribution) despite the poor result from the most recent period.

*3. Based on the current sales distribution, what is the average change in the updated factors?*

Based on December membership and the aggregate stop loss limits in place as of December 2013, the average change in the charge factors for aggregate stop loss for Cost Plus groups from the 2013 Filing to the 2014 Filing is a *decrease* of 0.5%, from 0.419% to 0.417%. The average change in risk charge factor for Refund Eligible groups is an increase of 0.6%, from 1.182% of claims to 1.189% of claims.

Please let us know if you have any further questions.

Sincerely,

A handwritten signature in black ink, appearing to read "Paul Schultz", with a long horizontal flourish extending to the right.

---

Paul Schultz, F.S.A., M.A.A.A.

Subject: Blue Cross and Blue Shield of Vermont - NAIC # 53295  
2013 Filing: Charge Factors for Aggregate Stop Loss, and  
Risk and Administration Charges for Experience Refund Eligible Product

Dear Mr. Keller:

Enclosed for your review and approval is the Blue Cross and Blue Shield of Vermont (BCBSVT) filing for:

- o 2013 Charge Factors for Aggregate Stop Loss, and
- o 2013 Risk and Administration Charges to be used in the rating of BCBSVT's Experience Refund Eligible product.

The Exhibits of the filing contain selected subsets of the charges. Also enclosed are:

- o 2013 ASL Factors.pdf, which contains the full table of Aggregate Stop Loss Rate Factors, and
- o 2013 Risk Charge Factors.pdf, which contains the full table of Risk Charge Factors.

Please let me know if we can answer any questions or provide further information during your review.

Sincerely,

Kevin Goddard

2013 Filing: Charge Factors for Aggregate Stop Loss, and Risk and  
Administration Charges for Experience Refund Eligible Product  
SERFF Tracking # BCVT-128846582, VFN 64210  
AMENDED per GMCB Decision and Order**

Dear Mr. Keller:

As requested, Blue Cross and Blue Shield of Vermont (BCBSVT) is amending its **Charge Factors for Aggregate Stop Loss, and Risk and Administration Charges for Experience Refund Eligible Product Filing for 2013**. As ordered by the GMCB in their Decision and Order, dated November 12, 2013, the factors in the enclosed amended filing were calculated using the Allowed Base Estimated Uncapped trend of 4.1% (not 4.3%, which is the Benefit Paid Estimated Uncapped trend) from the approved Third and Fourth Quarter 2013 BCBSVT Trend filing.

The enclosed documents for this amended filing are:

- o **AMENDED BCBSVT Exhibit 1**, which contains a subset of the Aggregate Stop Loss Rate Factors
- o **AMENDED 2013 ASL Factors.pdf's** (split into 4 pdf's for ease of electronic transmission), which contain the full table of the Aggregate Stop Loss Rate Factors
- o **AMENDED BCBSVT Exhibit 2**, which contains a subset of the Experience Refund Risk Charge Factors
- o **AMENDED 2013 Risk Charge Factors.pdf's** (split into 4 pdf's for ease of electronic transmission), which contain the full table of the Experience Refund Risk Charge Factors

Please let me know if you have any questions.

Sincerely,

  
Kevin Goddard

## **2013 Filing: BCBSVT Charge Factors for Aggregate Stop Loss, and Risk and Administration Charges for Experience Refund Eligible Product - AMENDED per GMCB Decision and Order**

### **Note to Reviewer**

Please note that the amended filing's factors are higher than those in the original filing. Page 3 of Oliver Wyman's September 12, 2013 opinion on this filing states:

“Since a lower trend assumption would lead to lower anticipated individual stop loss recoveries as a percent of total claims and lower individual stop loss charges, the portion of total claims remaining to be used in calculating recoveries under any aggregate stop loss would be expected to increase as a percentage of total claims, all else equal. Therefore, depending upon the underlying distribution of claims, reducing the assumed trend rate could lead to higher aggregate stop loss factors, however the net change to the combined cost of individual and aggregate stop loss coverage would be expected to decrease”.

Using a reduced trend leads to both a lower mean and a lower standard deviation of the normal distribution of expected claims at each individual stop loss (ISL) limit. However, because the relationship between the standard deviation and the mean changes (i.e. the ratio of the standard deviation to the mean increases), there is a greater expected fraction of aggregate claims in excess of each of the aggregate limits. Therefore the aggregate stop loss factors and experience refund risk charge factors of the amended filing are higher than those in the original filing.

**Blue Cross and Blue Shield of Vermont  
2013 Filing  
Charge Factors for Aggregate Stop Loss  
Risk & Administration Charges for Experience Refund Eligible Product  
Actuarial Memorandum**

**SUMMARY**

The purpose of this filing is to:

1. reprice our Aggregate Stop Loss coverage offerings to our Cost Plus groups, and
2. reprice the risk and administration charge factors to be used in the development of rates for Experience Refund Eligible plans.

Blue Cross and Blue Shield of Vermont (BCBSVT) will apply the new factors in the determination of rates for groups and exempt associations of 50 or more subscribers that are renewing or applying for coverage under Cost Plus or Experience Refund Eligible plans with BCBSVT delivered 10 or more business days after the date of approval of this filing through 10 business days after the approval of a successor filing.

The method used is based on VFN41126, Method of Determination of Aggregate Stop Loss Charge Factors. For the determination of the risk charge factors to be used in the development of rates for Experience Refund Eligible plans, the loadings for expected loss ratio and for default do not apply.

**Distribution of Individual Claims by Amount**

The distribution of individual claims by amount was generated from the 2011 Milliman Health Cost Guidelines distribution of allowed charges (adjusted for VT) by trending the distribution to produce the same expected average annual allowed charge per member as the trended BCBSVT distribution for Q1 2014 (developed as part of the determination of the Provision for Large Claims and Stop Loss filing<sup>1</sup>), and then applying claims-to-allowed-charges factors.

For each specific stop loss level, the expected claims amount and standard deviation of the distribution of claims less than the specific stop loss level are calculated.

---

<sup>1</sup> See page 3 of “Blue Cross and Blue Shield of Vermont, Provision for Large Claims and Stop Loss Filing for 2013, Actuarial Memorandum”, SERFF # BCVT-128809318, VFN 63456.

**Blue Cross and Blue Shield of Vermont  
2013 Filing  
Charge Factors for Aggregate Stop Loss  
Risk & Administration Charges for Experience Refund Eligible Product  
Actuarial Memorandum**

**Expected Claims Factors**

For each number of members (N) in the following table:

N
100
200
300
400
500
600
700
800
900
1,000
1,500
2,000
3,000
4,000
5,000
10,000
20,000
30,000
40,000

and for each ISL limit, a preliminary expected fraction of aggregate claims in excess of 90%, 95%, 100%, 105%, 110%, 115%, 120%, 125%, 130%, 135%, and 140% of expected aggregate claims was calculated. These were then adjusted for uncertainty in the projection of expected claims as described in the table below:

Expected to projected expected	>107.5%	107.5% -	102.5% -	97.5% -	< 92.5%
Fraction of projections	F <sub>1</sub> (Estimated from distribution)	F <sub>2</sub> (Estimated from distribution)	F <sub>3</sub> (Estimated from distribution)	F <sub>4</sub> (Estimated from distribution)	F <sub>5</sub> (Estimated from distribution)
Assumed (Actual expected) / (projected expected) factor	1.1	1.05	1.00	0.95	0.90
Weighting Factor for averaging	F <sub>1</sub> /1.1	F <sub>2</sub> /1.05	F <sub>3</sub>	F <sub>4</sub> /.95	F <sub>5</sub> /0.9

**Blue Cross and Blue Shield of Vermont  
2013 Filing  
Charge Factors for Aggregate Stop Loss  
Risk & Administration Charges for Experience Refund Eligible Product  
Actuarial Memorandum**

**CHARGE FACTORS FOR AGGREGATE STOP LOSS**

The factors developed above were then divided by 0.7 to produce an expected loss ratio (net of the provision for default) of 70%.

To protect BCBSVT against potential default situations, the proposed ASL rates include an additional fixed risk charge of 0.5% of expected claims under the ISL limit for groups with less than 20,000 members, and a reduced fixed risk charge of 0.4% of expected claims under the ISL limit for groups of 20,000 members or more.

To assure that the factors on each line were strictly decreasing with increasing stop loss percentage, in cases where the ratio for a 130% stop loss percentage was less than 0.0001:

- the calculated value for 130% was increased by 0.00001
- the calculated value for 125% was increased by 0.00002
- the calculated value for 120% was increased by 0.00003
- the calculated value for 115% was increased by 0.00004
- the calculated value for 110% was increased by 0.00005.

The resulting factors were then multiplied by ratios of claims under the limit to total claims at the various ISL limits. Thus the final factors are applicable to total expected claims, as is required for use in the new BCBSVT rating formula<sup>2</sup>.

The tables of factors are contained in the **ASL Factors.pdf** file that accompanies this filing. A subset of the Aggregate Stop Loss factors table is attached as Exhibit 1.

If the expected number of members (N) in the rating period is not one of the values in either table, the value is determined by interpolating linearly between the entries in the table for the numbers of members immediately below and above N.

---

<sup>2</sup> See “Blue Cross and Blue Shield of Vermont, Group Merit Rating Program” filing, SERFF # BCVT-128267446, VFN 59619.

**Blue Cross and Blue Shield of Vermont  
2013 Filing  
Charge Factors for Aggregate Stop Loss  
Risk & Administration Charges for Experience Refund Eligible Product  
Actuarial Memorandum**

**RISK & ADMINISTRATION CHARGES FOR EXPERIENCE REFUND ELIGIBLE PRODUCT**

**Risk Charges for Experience Refund Eligible Plans**

The BCBSVT Experience Refund Eligible products involve pricing margins of 10% or 5% (i.e. expected claims below the ISL limit will be increased by 10% or 5% in the determination of the premium). The risk charge factors are developed in the same way as the ASL - factors, except that the loadings for expected loss ratio and for default do not apply. These factors are applied to total expected claims (before adjustment for pricing margin) and the retention is increased by the risk charge (both in the prospective pricing and in the refund calculation).

The tables of factors are contained in the **Risk Charge Factors.pdf** file that accompanies this filing. A subset of the risk factors table is attached as Exhibit 2.

If the expected number of members (N) in the rating period is not one of the values in the table, the value is determined by interpolating linearly between the entries in the table for the numbers of members immediately below and above N.

**Administration Charge**

An administration charge equal to a settlement administration charge offset by an investment income credit will be made.

1. Settlement Administration Charge: An additional administrative charge of **\$1,600** (equal to the amount in last year's filing, \$1,550, increased by 2.5%<sup>3</sup> trend to reflect the assumed wage increase for the direct staff cost) will be included to offset the costs of administering the retrospective arrangement.
2. Investment Income Adjustment:

Margin factor	Investment Income adjustment factor (applicable to expected claims below the ISL limit)
10%	0.4%
5%	0.2%

<sup>3</sup> See the Appendix of "Blue Cross and Blue Shield of Vermont, Administrative Charges and Contribution to Reserves" filing, SERFF # BCVT-128808862, VFN 63454.

**ACTUARIAL CERTIFICATION**

I am a Fellow of the Society of Actuaries, a Member of the American Academy of Actuaries, and I meet the Academy's qualification standards for rendering opinions with regard to health rate filings.

Based on my review of the block's underlying experience and methods applied, it is my opinion that the rate factors set forth in this filing are adequate and are neither excessive nor unfairly discriminatory.

*Donna M. Lee*

***\*Applied to total expected claims***

February 5, 2014

Mr. Josh Hammerquist, A.S.A., M.A.A.A.  
Assistant Vice President & Consulting Actuary  
Lewis & Ellis, Inc.

**Subject: Your 01/31/2014 Questions re: Blue Cross and Blue Shield of Vermont  
2014 BCBSVT Charge Factors for ASL and Risk & Admin Charge Filing  
(SERFF Tracking #: BCVT-129373971)**

Dear Mr. Hammerquist:

In response to your request dated January 31, 2014, here are *your questions* and our answers:

1. *Why were the Milliman Health Cost Guidelines trended to Q1 2015, rather than July 1, 2015?*

This is a matter of terminology. The "trended BCBSVT distribution for Q1 2015" refers to the distribution used in the determination of factors for a case effective in Q1 2015.

2. *The memorandum jumps from "the expected claims amount and standard deviation of the distribution of claims less than the specific stop loss levels" on page 1 to the "expected aggregate claims" on page 2.*

- a. *How was the distribution of individual claims used to estimate the aggregate claims?*
- b. *Please provide the relevant sections of VFN 41126, Method of Determination of ASL Charge Factors*

a. The following is from <http://www.math.uah.edu/stat/sample/CLT.html><sup>1</sup> :

The central limit theorem implies that if the sample size  $n$  is "large" then the distribution of the partial sum<sup>2</sup>  $\mathbf{Y}_n$  is approximately normal with mean  $n\mu$  and variance  $n\sigma^2$ .

Equivalently the sample mean  $\mathbf{M}_n$  is approximately normal with mean  $\mu$  and variance  $\sigma^2/n$ . The central limit theorem is of fundamental importance, because it means that we can approximate the distribution of certain statistics, even if we know very little about the underlying sampling distribution.

---

<sup>1</sup> University of Alabama at Huntsville website

<sup>2</sup> Suppose that  $\mathbf{X}=(X_1, X_2, \dots)$  is a sequence of independent, identically distributed, real-valued random variables with common probability density function  $f$ , mean  $\mu$ , and variance  $\sigma^2$ . We assume that  $0<\sigma<\infty$ , so that in particular, the random variables really are *random* and not constants. Let  $Y_n = \sum_{i=1}^n X_i, n \in \mathbb{N}$

Note that by convention,  $Y_0=0$ , since the sum is over an empty index set. The random process  $Y = (Y_0, Y_1, Y_2, \dots)$  is called the *partial sum process* associated with  $\mathbf{X}$ .

In the case in point this theorem implies that, for any particular specific stop loss level (L), the distribution of projected aggregate claims for a group of sufficient size (N) approximates a normal distribution having an expected value equal to N times the expected annual claim expense per member under the limit L and a standard deviation equal to the square root of N times the standard deviation of the expected annual claims expense per member under the limit L.

b. See VFN41126\_ASL\_Method.pdf.

3. *Please provide quantitative and qualitative support for the factors on the bottom of page 2 of the actuarial memorandum to adjust for uncertainty in the projection of expected claims.*

To adjust for uncertainty in the projection of expected claims we grouped the claims projections into 5 categories:

- Projected claims less than true mean/107.5%
- True mean/102.% > projected claims >= true mean/107.5%
- True mean/97.5% > projected claims >= true mean/102.5%
- True mean/92.5% > projected claims >= true mean/92.5%
- Projected claims > true mean/92.5%

We estimated the fraction of projections in each category from the normal distribution for the particular ISL limit and number of members for which the calculation is being done. That is, we assumed that the projected claims were distributed in the same way as the experience in the rating period is expected to be distributed.<sup>3</sup>

For purposes of the calculation we modeled the projections in the various categories as, respectively:

- True mean/110%
- True mean/105%
- True mean/100%
- True mean/95%
- True mean/90%

We estimate the expected fraction of expected claims in excess of a given limit as the weighted average of the preliminary expected fraction of aggregate claims in excess of limits centered on the given limit and adjusted to reflect the difference in the projected expected to the true expected amount. This is described in the table below:

---

<sup>3</sup> There are sources of variation other than random variation in individual claims (trend estimation, group characteristic changes, etc.). The rating formula also has provisions to reduce the impact of experience period variations. We are assuming that these two effects are approximately offsetting.

Expected to projected expected	>107.5%	107.5% - 102.5%	102.5% - 97.5%	97.5% - 92.5%	< 92.5%
Fraction of projections <sup>4</sup>	F <sub>1</sub> (Estimated from distribution)	F <sub>2</sub> (Estimated from distribution)	F <sub>3</sub> (Estimated from distribution)	F <sub>4</sub> (Estimated from distribution)	F <sub>5</sub> (Estimated from distribution)
Assumed (Actual expected) / (projected expected) factor	1.1	1.05	1.00	0.95	0.90
Weighting Factor for averaging	F <sub>1</sub> /1.1	F <sub>2</sub> /1.05	F <sub>3</sub>	F <sub>4</sub> /.95	F <sub>5</sub> /0.9

See Illustrative Aggregate Calculation.xls

*4. Provide quantitative support for the additional risk charges to protect against default situations.*

The risk charges for default represent management judgment of an appropriate charge for this expected to be rare contingency. See Failure to Fund.xlsx for an estimate of the implied length of time this charge would need to be collected to cover a failure to fund.

*5. Please provide quantitative support that demonstrates the reasonableness of interpolating results for a group with 150 members for the aggregate stop loss factors and the experience refund risk charge factors.*

To address this question we modified the programs to produce calculated ASL and RC factors for 100, 110, 120, 130, 140, 150, 160, 170, 180, 190, and 200 members. The results were loaded into an EXCEL file, interpolation\_100\_200.xlsx. The “interpolate\_asl” and “interpolate\_rc” tabs in that file take as an input item the ISL limit and compares the calculated and interpolated value for each size category.

For realistic ISL levels the differences are typically less than about 0.3% of expected claims, which seems reasonable given the nature of the model.

<sup>4</sup> Let  $m$ = the mean of the aggregate claims distribution and  $s$ =the standard deviation of the aggregate claims distribution then, using the notation from Microsoft EXCEL:

- $F_1 = 1 - \text{NORMDIST}(1.075*m, m, s, \text{TRUE})$
- $F_2 = \text{NORMDIST}(1.075*m, m, s, \text{TRUE}) - \text{NORMDIST}(1.025*m, m, s, \text{TRUE})$
- $F_3 = \text{NORMDIST}(1.025*m, m, s, \text{TRUE}) - \text{NORMDIST}(0.975*m, m, s, \text{TRUE})$
- $F_4 = \text{NORMDIST}(0.975*m, m, s, \text{TRUE}) - \text{NORMDIST}(0.925*m, m, s, \text{TRUE})$
- $F_5 = \text{NORMDIST}(0.925*m, m, s, \text{TRUE})$

*6. How was the 2013 settlement administration charge of \$1,600 calculated?*

Discussions with the operational areas involved produced an estimate of 20 hours of staff time (includes determination of the settlement and estimations of the settlement liability each month for financial reporting purposes). This was multiplied by an assumed hourly rate for direct staff cost and a loading factor of 2 to account for overhead etc. The result was then rounded to produce the \$1600 estimate.

*7. What is the investment income adjustment used for?*

The investment income adjustment accounts for the additional investment income expected to be generated by the expected experience refund amount (5% or 10% of expected policyholder funded claims) included in the prospective pricing.

Please let us know if you have any further questions.

Sincerely,

A handwritten signature in black ink, appearing to read "Paul Schultz", with a long horizontal flourish extending to the right.

---

Paul Schultz, F.S.A., M.A.A.A.

## Failure to fund

Assume:

Billing period is monthly

Time to react (recognize failure to fund, dun policyholder etc.) before notification to subscribers is 3 weeks.

Require notification time ~ 1 week

Therefore amount outstanding is approx 2 months of claims (original billed plus 4 weeks)

Expected amount of default (fraction of annual claims) =

Initial billed amount unpaid	0.08333
additional 4 weeks	0.07692
IBNP claims	0.07168 estimate from 12/31/2014 CPC reservemodel
total	0.23194
Required working fund	0.12500 1.5 months of expected claims
Balance	0.10694

Default chg

factor 0.50% % of annual claims

implied average time before default 21.38734 years

Subject: Blue Cross and Blue Shield of Vermont  
Method of Determination of Aggregate Stop Loss Charge Factors  
NAIC #: 53295

Dear Ms. Rugnetta:

Attached for filing and approval please find Blue Cross and Blue Shield of Vermont's proposed method of determining Aggregate Stop Loss charge factors for Cost Plus plans.

There are two documents attached:

- A description of the method, and
- A pro forma Aggregate Stop Loss charge factor filing prepared in accordance with the proposed method.

Also included is a CD containing the full charge factor table as referenced in the pro forma filing document.

Please let me know if we can answer any questions or provide further information.

Sincerely,

Kevin Goddard  
Vice President, External Affairs

## Method of Determination of Aggregate Stop Loss Charge Factors

### Purpose

The purpose of this paper is to discuss the method to be used to determine Aggregate Stop Loss charges for BCBSVT's Cost Plus plans.

### Summary

The method starts with distributions of individual claims by amount. From these, distributions of aggregate claims by amount are derived for a set of sample group sizes that spans from less than permissible under our underwriting standards to larger than our anticipated largest case size. For each sample case size, preliminary net factors are developed for claims in excess of a set of model percentages of aggregate expected claims. ✓

★ The preliminary factors provide for the risk associated with random variation around the mean claim amount. They do not provide for the risk arising from variation in the projected mean claim amount. To adjust for this we take weighted averages of the preliminary factors.

Finally the resulting factors are increased to reflect a 70% target loss ratio and a provision for default risk is added.

It is unlikely that an actual case will have exactly one of the sample case sizes. The factor for a size not exactly equal to one of the sample sizes is determined by interpolation between the factors for the next lower and higher sample size.

### Distribution of Individual Claims by Amount

In the development of BCBSVT's Individual Stop Loss charges, distributions of claims by amount were generated from the 2008 Milliman Health Cost Guidelines distribution of allowed charges (adjusted for VT) by trending the distribution to produce the same expected average annual allowed charge per member as the trended BCBSVT distribution and then applying claims-to-allowed-charges factors.<sup>1</sup> The distribution for Q1 2010 is used as the base to develop the aggregate charges. For each specific stop loss level the expected claims amount and standard deviation of the distribution of claims less than the specific stop loss level are calculated.

*use same distribution for stop loss*

### Aggregate Claims Distributions

The Central Limit Theorem implies that, for any particular Specific Stop Loss level (L), the distribution of projected aggregate claims for a group of sufficient size (N) approximates a normal distribution having an expected value equal to N times the expected annual claim expense per member under the limit L and a standard deviation equal to the square root of N times the standard deviation of the expected annual claims expense per member under the limit L.

<sup>1</sup> see "Blue Cross and Blue Shield of Vermont Large Group Provision for Large Claims and Stop Loss Filing Actuarial Memorandum" filed October 31, 2008; page 3

# Blue Cross and Blue Shield of Vermont

## Method of Determination of Aggregate Stop Loss Charge Factors

### Aggregate Stop Loss Expected Claims Factors

For each number of members (N) in the following table:

N
100
200
300
400
500
600
700
800
900
1000
1500
2000
3000
4000
5000
10000
20000
30000
40000

and for each ISL limit a preliminary expected fraction of aggregate claims in excess of 90%, 95%, 100%, 105%, 110%, 115%, 120%, 125%, 130%, 135%, and 140% of expected aggregate claims is calculated.

To adjust for uncertainty in the projection of expected claims we use considered the following possibilities: true mean more than 107.5% of projected, true mean between 107.5% and 102.5% of projected, true mean between 102.5% and 97.5% of projected, true mean between 97.5% and 92.5% of projected and true mean less than 92.5% of projected. We estimated the fraction of projections in each category from the normal distribution for the particular ISL limit and number of members for which the calculation is being done. Effectively we are assuming that the experience period claims were distributed about the true expected value of claims in the same way as the projection period claims, and that the deviation is carried forward to the projection period estimate. [There are sources of variation other than random variation in individual claims (trend estimation, group characteristic changes, etc.). The rating formula also has provisions to reduce the impact of experience period variations. We are assuming that these two effects are approximately offsetting.] We estimate the expected fraction of expected claims in excess of a given limit as the weighted average of the preliminary expected fraction of aggregate claims in excess of limits centered on the given limit and adjusted to reflect the difference in the projected expected to the “true” expected amount.

**Blue Cross and Blue Shield of Vermont**  
**Method of Determination of Aggregate Stop Loss Charge Factors**

Expected to projected expected	>107.5%	107.5%	102.5%	97.5%	< 92.5%
Fraction of projections <sup>2</sup>	F <sub>1</sub> (Estimated from distribution)	F <sub>2</sub> (Estimated from distribution)	F <sub>3</sub> (Estimated from distribution)	F <sub>4</sub> (Estimated from distribution)	F <sub>5</sub> (Estimated from distribution)
Assumed (Actual expected) / (projected expected) factor	1.1	1.05	1.00	0.95	0.90
Weighting Factor for averaging	F <sub>1</sub> /1.1	F <sub>2</sub> /1.05	F <sub>3</sub>	F <sub>4</sub> /.95	F <sub>5</sub> /0.9

For example, for a 125% aggregate stop loss, we use a fraction-of-expected value equal to:

$(F_5/0.9) * 115\%$  preliminary value +  $(F_4/0.95) * 120\%$  preliminary value +  $F_3 * 125\%$  preliminary value +  $(F_2/1.05) * 130\%$  preliminary value +  $(F_1/1.1) * 135\%$  preliminary value.

**Expected Loss Ratio**

The factors developed above are then divided by 0.7 to produce an expected loss ratio (net of the provision for default) of 70%.

**Provision for Default**

To protect the Plan against any potential default situation, the proposed ASL rates include an additional fixed risk charge of 0.5% of expected claims under the ISL limit for groups with less than 20,000 members and a reduced charge of 0.4% of expected claims under the ISL limit for groups of 20,000 members or more. (This load is the same as in previous filings, except that the limit is expressed in terms of members rather than contracts .)

**Adjustment for Number of Members**

If the expected number of members in the rating period (N) is not one of the values in the table, the value is determined by interpolating linearly between the entries in the table for the numbers of members immediately below and above N.

<sup>2</sup> Let m= the mean of the aggregate claims distribution and s=the standard deviation of the aggregate claims distribution then, using the notation from Microsoft EXCEL:

- o  $F_1 = 1 - \text{NORMDIST}(1.075 * m, m, s, \text{TRUE})$
- o  $F_2 = \text{NORMDIST}(1.075 * m, m, s, \text{TRUE}) - \text{NORMDIST}(1.025 * m, m, s, \text{TRUE})$
- o  $F_3 = \text{NORMDIST}(1.025 * m, m, s, \text{TRUE}) - \text{NORMDIST}(0.975 * m, m, s, \text{TRUE})$
- o  $F_4 = \text{NORMDIST}(0.975 * m, m, s, \text{TRUE}) - \text{NORMDIST}(0.925 * m, m, s, \text{TRUE})$
- o  $F_5 = \text{NORMDIST}(0.925 * m, m, s, \text{TRUE})$

# Blue Cross Blue Shield of Vermont Pro Forma Aggregate Stop Loss Filing Actuarial Memorandum

## Summary

The purpose of this filing is to reprice our Aggregate Stop Loss coverage offerings to our Cost Plus groups. BCBSVT will apply the new factors in the determination of rates delivered 15 days or more after approval of this filing for groups and exempt associations of 50 or more subscribers that are renewing or applying for coverage under Cost Plus plans with Blue Cross and Blue Shield of Vermont.

The method used is that described in the accompanying discussion memoranda.

## Distribution of Individual Claims by Amount

The distribution of individual claims by amount was generated from the 2008 Milliman Health Cost Guidelines distribution of allowed charges (adjusted for VT) by trending the distribution to produce the same expected average annual allowed charge per member as the trended BCBSVT distribution for Q1 2010 developed as part of the determination of the Provision for Large Claims and Stop Loss filing and then applying claims-to-allowed-charges factors.<sup>1</sup>

For each specific stop loss level the expected claims amount and standard deviation of the distribution of claims less than the specific stop loss level are calculated.

## Aggregate Stop Loss Expected Claims Factors

For each number of members (N) in the following table:

N
100
200
300
400
500
600
700
800
900
1000
1500
2000
3000
4000
5000
10000
20000
30000
40000

---

<sup>1</sup> see "Blue Cross and Blue Shield of Vermont Large Group Provision for Large Claims and Stop Loss Filing Actuarial Memorandum" filed October 31, 2008; page 3

**Blue Cross Blue Shield of Vermont  
Pro Forma Aggregate Stop Loss Filing  
Actuarial Memorandum**

and for each ISL limit a preliminary expected fraction of aggregate claims in excess of 90%, 95%, 100%, 105%, 110%, 115%, 120%, 125%, 130%, 135%, and 140% of expected aggregate claims was calculated.

These were then adjusted for uncertainty in the projection of expected claims as described in the table below:

Expected to projected expected	>107.5%	107.5% - 102.5%	102.5% - 97.5%	97.5% - 92.5%	< 92.5%
Fraction of projections	F <sub>1</sub> (Estimated from distribution)	F <sub>2</sub> (Estimated from distribution)	F <sub>3</sub> (Estimated from distribution)	F <sub>4</sub> (Estimated from distribution)	F <sub>5</sub> (Estimated from distribution)
Assumed (Actual expected) / (projected expected) factor	1.1	1.05	1.00	0.95	0.90
Weighting Factor for averaging	F <sub>1</sub> /1.1	F <sub>2</sub> /1.05	F <sub>3</sub>	F <sub>4</sub> /0.95	F <sub>5</sub> /0.9

**Expected Loss Ratio**

The factors developed above were then divided by 0.7 to produce an expected loss ratio (net of the provision for default) of 70%.

**Provision for Default**

To protect the Plan against any potential default situation, the proposed ASL rates include an additional fixed risk charge of 0.5% of expected claims under the ISL limit for groups with less than 20,000 members and a reduced charge of 0.4% of expected claims under the ISL limit for groups of 20,000 members or more.

**Adjustment for Number of Members**

If the expected number of members in the rating period (N) is not one of the values in the table, the value is determined by interpolating linearly between the entries in the table for the numbers of members immediately below and above N.

**Factor Tables**

The tables of factors are contained in the asl\_factors.pdf file on the CD that accompanies this filing. A subset of the asl\_factors table is attached as exhibit 1.

**Blue Cross Blue Shield of Vermont**  
**Pro Forma Aggregate Stop Loss Filing**  
**Actuarial Memorandum**

**Actuarial Certification**

I am a Fellow of the Society of Actuaries, a Member of the American Academy of Actuaries, and I meet the Academy's qualification standards for rendering opinions with regard to health rate filings.

Based on my review of the block's underlying experience and methods applied, it is my opinion that the rate factors set forth in this filing are adequate and are neither excessive nor unfairly discriminatory.

A handwritten signature in black ink, appearing to read 'V. G. Mace', is written over a horizontal line.

Vincent G. Mace FSA, MAAA
