Filing Description:
CIGNA Health and Life Insurance Company
GROUP HEALTH RATING MANUAL
NAIC\# 67369

Enclosed is a rate filing for Cigna Health and Life Insurance Company (CHLIC) medical benefits for large employer groups. Claim costs and factors are being filed for Open Access Plus, PPO, Network, Indemnity, and retiree medical insurance products as well as the pharmacy, mental health/substance abuse and other riders These rates will be applied to new quotes upon the next pricing model implementation date following the filing approval date.

The previous filing was approved on 9/2/2015 under Serff Tracking number CCGP-129725944.

The attached Vermont Filing Summary shows historical earned premium, incurred losses, and loss ratios, Vermont and countrywide. Please note that the values in the exhibit have been developed in such a way as to be consistent with the company's Supplemental Health Care Exhibits.

Please contact Matthew Danziger at (860) 226-1672 or at matthew.danziger@cigna.com or Dreanna Belting at (770) 261-7908 or at dreanna.belting@cigna.com with any questions or concerns regarding this filing.

Dear Maria Mahmood,

## Introduction:

Update the filing per GMCB Order and Decision dated 03/29/2016, docket number GMCB-001-16rr (attached.) Note that a new post submission update must be submitted to reflect the modified approved rates. This includes the rate rule schedule tab and the rate review detail tab, and all other changes required to show the modified approved rate. Also, provide an effective date for this filing and rate change.

## Conclusion:

Sincerely,
Thomas Crompton

# STATE OF VERMONT <br> GREEN MOUNTAIN CARE BOARD 

| In re: | Cigna Health and Life Insurance | ) |
| :--- | :--- | :--- |
| Company 2016 Large Group PPO Manual | ) |  |
| Rate Filing | ) |  |
|  |  | SERFF No.: CCGP-1302 130243269 |

## DECISION \& ORDER

Introduction
Vermont law requires that health insurers submit major medical rate filings to the Green Mountain Care Board which shall approve, modify, or disapprove the filing within 90 calendar days of its receipt. 8 V.S.A. § 4062(a)(2)(A). On review, the Board must determine whether the proposed rate is affordable, promotes quality care, promotes access to health care, protects insurer solvency, and is not unjust, unfair, inequitable, misleading or contrary to Vermont law. 8 V.S.A. § 4062(a)(3).

## Procedural History

On December 31, 2015, CIGNA Health and Life Insurance Company (CHLIC) submitted its 2016 Large Group Manual Rate Filing to the Board via the System for Electronic Rate and Form Filing (SERFF). The Office of the Health Care Advocate (HCA), representing the interests of Vermont consumers of health insurance, entered an appearance as a party to this rate filing. On February 29, 2016, the Board posted to the web an analysis provided by its contract actuaries, Lewis \& Ellis (L\&E), and the analysis and opinion of the Department of Financial Regulation (Department) regarding the impact of the proposed filing on the insurer's solvency.

The Board received no public comments. The parties have waived a hearing pursuant to GMCB Rule 2.000 and have filed memoranda in lieu of hearing.

## Findings of Fact

1. CHLIC is an operating subsidiary of Cigna Corporation, an international, for-profit health services corporation headquartered in Bloomfield, Connecticut.
2. This filing updates the methodology for the CHLIC large group manual rating ${ }^{1}$ and covers the Open Access Plus (OAP), Preferred Provider Organization (PPO), Network (NWK),
[^0]Indemnity, and retiree medical insurance large group products. The filing impacts 15 policyholders and 2,586 covered lives.
3. CHLIC requests that the Board approve its filing, which would produce an average annual rate change of $-1.1 \%$ and range from $-3.9 \%$ to $1.1 \%$.
4. To determine its manual rate, CHLIC updated its base claim assumptions and claim probability distribution (CPD) tables using 2014 data. The combined base claim assumption changes and updated CPD tables result in an average $0.0 \%$ impact.
5. CHLIC utilized a paid medical trend of $9.7 \%$ for 2015 and $8.0 \%$ for 2016 and 2017, which is lower than the medical trend used in its previous filing. The medical trend impacts the rate by approximately $-1.5 \%$.
6. To determine its pharmacy trend, CHLIC updated its prescription drug base claim assumptions and area factors to reflect costs of specialty drugs, planned revisions to the drug lists, and market-specific experience. Taking into account unit cost and utilization, CHLIC calculated its 2015 total pharmacy trend at $12.0 \%$ and the 2016 trend at $12.9 \%$.
7. The filing includes retention expenses of $17.5 \%$ which includes $3.5 \%$ in profit. The retention expenses impact the rate by $1.1 \%$.
8. L\&E reviewed the filing and recommends no modifications with the exception of the requested profit. According to CHLIC's Supplemental Health Care Exhibits, the carrier earned a $3.7 \%$ profit in 2013 and $13.5 \%$ in 2014; for 2015, CHLIC projects its profit will be "in the low single digits." Given this volatility, L\&E recommends reducing the profit to $2.0 \%$ "to be more in line with all other Vermont market participants." L\&E Memo at 6-7.
9. On review of the carrier's solvency, the Department advises the Board that in 2014, CIGNA Holding Company's operations in Vermont accounted for less than one percent of its total premiums earned, and that "CHLIC's Vermont operations pose little risk to its solvency, or to the solvency of CIGNA Holding Company." See Solvency Analysis at 2.
10. The HCA requests that the Board reduce CHLIC's profit to $1.0 \%$, consistent with the Board's prior CHLIC rate decisions. CHLIC advocates for no reduction to its rate request, arguing that the Board has authority to modify a rate, but cannot modify a component of the
rate. In addition, CHLIC contends that the medical loss ratio (MLR) ${ }^{2}$ provisions in the Affordable Care Act (ACA) are the appropriate mechanism to control an insurer's profitability; CHLIC met these requirements in 2013 and 2014, and anticipates it will continue to do so in 2015 and 2016. Finally, CHLIC contends that its small Vermont membership makes it "vulnerable to a high level of claim volatility" and that reducing its profit could lead to rates that are inadequate. See CHLIC Memorandum (March 23, 2016) at 1-2.

## Standard of Review

1. The Board reviews rate filings to ensure that rates are not "excessive, inadequate or unfairly discriminatory," that they promote quality care and access to health care, protect insurer solvency, and are not unjust, unfair, inequitable, misleading or contrary to Vermont law. 8 V.S.A. § 4062. In addition, the Board considers changes in health care delivery, changes in payment methods and amounts, and other issues at its discretion. 18 V.S.A. § 9375(b)(6).
2. On review of a company's solvency, the Board will consider the Department's analysis and opinion of the impact of the proposed rate on the insurer's solvency and reserves. 8 V.S.A. § 4062(a).
3. The insurer proposing a rate change has the burden to justify the requested rate. GMCB Rule 2.000: Rate Review, § 2.104(c).

## Conclusions of Law

4. The sole contested issue in this filing is CHLIC's requested profit margin. As noted by our actuaries and by the HCA, we have reduced CHLIC's proposed profit in each of the past two filings. See GMCB Docket nos. 006-15rr (reduced from 3.5\% to $1.0 \%$ ); 007-14rr (reduced from $3.0 \%$ to $1.0 \%$ ).
5. We remain unpersuaded by CHLIC's argument that we cannot assess the reasonableness of an underlying rate component. To the contrary, review of each rate component allows us to trim costs where appropriate to ensure that the rate is adequate for insurers, and fair and affordable for consumers. This view is consistent with federal requirements for designation as an "effective rate review program." See, e.g., Center for Consumer Information and Insurance Oversight (CCIIO), State Effective Rate Review Programs
[^1]Fact Sheet (lists series of factors to consider when reviewing rate change, including "reserve needs"), available at https://www.cms.gov/CCIIO/Resources/Fact-Sheets-and-

FAQs/rate_review fact sheet.html.
6. And while we agree that a small membership can result in increased plan volatility, we do not agree that reducing CHLIC's profit request in this filing threatens the carrier's solvency or will likely lead to rates that are inadequate. CHLIC achieved profits in excess of its current request in both 2013 (3.7\%) and 2014 (13.5\%), and anticipates earning a profit in 2015, notwithstanding the reductions we ordered in each of the last two filings.
7. Accordingly, we again reduce CHLIC's profit to $1.0 \%$. With only a small fraction of its membership in Vermont, this reduction will have no material impact on CHLIC's or its parent corporation's financial stability, and makes coverage more affordable for Vermonters.

## Order

For the reasons discussed above, the Board modifies CHLIC's 2016 Large Group Manual Rate Filing by reducing the profit margin from $3.5 \%$ to $1.0 \%$. We thereafter approve the filing as modified, resulting in an approximate $-3.5 \%$ average annual rate decrease.

## So ordered.

Dated: March 29, 2016 at Montpelier, Vermont.

Matt:

Upon review of the responses submitted on February 3, 2016, the following additional information is needed:

1. What is the overall rate impact on a PMPM basis?
2. Page 8 of the "Objection Letter 1 Responses" uploaded on January 21, 2016 states that, "... due to a decrease in administrative fees for GC ( $0.4 \%$ )..." What does GC stand for?
3. Please update the Actuarial Certification page with appropriate reference. Currently it was referenced to "Commissioner of Insurance", which should be "Green Mountain Care Board" in Vermont. Also please include all relevant ASOPs that were observed in the Actuarial Certification.
4. What is the realized profit for the block of Large Group for 2014? Please make sure that the figure can be backed up by the 2014 financial statement.
5. To the extent that the 2015 data is available, what is the realized profit for the block of Large Group for 2015? Please make sure that the figure can be backed up by the 2015 annual or quarterly financial statement.

Please respond no later than February 19, 2016.

Our review of filing will be placed in suspense pending your response. Contact me if you have any questions.

SERFF Tracking \# CCGP-130243269
Matt:

Upon review of the responses submitted on January 21, 2016, the following additional information is needed:

1. Please explain in more details the "representative sample of VT sitused business" referenced in response \#1. What are the criteria of selecting the sample? How representative was the sample of the total insured lives in the state of VT?
2. As stated in response \#2, "minor changes were made to the shaping of our CPD based on book of business claims experience". Please provide a comparison of the shaping of the CPD before and after the changes and explain in more details why these changes are necessary.
3. Response \# 2 indicates that "the combination of all pricing methodology changes (including area factors and base rates, and retention) result in an overall rate change of $-1.10 \%$ ". Please provide a breakdown of the $-1.10 \%$ that corresponds to the effects of the above referenced factors respectively.
4. We noted that the number of covered lives and member months decreased significantly from the last filing. Please explain how this decrease was being considered in the 2014/2015 trend normalization factor.
5. Provide the definition of "lock-in decrement". Under what circumstances would the 0.99 factor be applied?
6. Provide the definition of "criteria-based network adjustment". Under what circumstances would this factor be applied? Also, why would the adjustment vary from 0.8505 to 0.9999 ?
7. Provide an example based on a real live case from previous year to illustrate how the demographic aging adjustment is applied.
8. Why is there a variation in the pharmacy area factor between proclaim platform and facets platform? We did not note any variation in the pharmacy area factors in the last filing.
9. In response \#13, premium tax is stated as $1.8 \%$ in the calculation but $2.1 \%$ in the assumption write-up. Which one is correct? Would this inconsistency affect any other calculation?

Please respond no later than February 3, 2016.
Our review of filing will be placed in suspense pending your response. Contact me if you have any questions.

VT - Cigna LG Major Medical Filing 2016
SERFF Tracking \# CCGP-130243269

## Dear Mr. Danziger:

Lewis \& Ellis, Inc (L\&E) have been retained by the Green Mountain Care Board ("GMCB") to review the above referenced Large Group product filing submitted on 12/31/2015. Upon review of the actuarial memorandum and related information submitted, the following additional information is needed:

1. Please list and quantify the reasons for the overall rate impact of $-1.10 \%$, and explain why policyholders could receive a rate increase/decrease that ranges from $-3.90 \%$ to $1.10 \%$.
2. The actuarial memorandum indicates that one of the changes to methodology includes "updates to the based medical claim assumptions and the claims probability distribution".
a. Please explain in more detail about the updates, including but not limited to experience period and data sources;
b. Quantify the impact of updating base medical claim assumptions and the CPD table respectively and their combined effect.
3. Regarding the medical trend assumptions,
a. Table 29 of the filing shows a minimum and maximum of medical trend for Vermont while Table 28 shows that only the maximum trend is used in all three areas. Please clarify what trend assumptions are being used in the pricing model.
b. If the trend assumptions used in the model are different from those shown in the confidential Supplemental Exhibits, please provide support for the trend assumptions in a similar format as the confidential Supplemental Exhibits.
c. Explain the change in the professional unit trend from 2015 to 2016 that is shown in the confidential Supplemental Exhibits.
4. We have observed a significant change in the normalization factor from the $14 / 13$ trend period to 3Q YTD 15/14 trend period, as shown in the confidential Supplemental Exhibits. What are the driving factors for such change, and what indicated the need for a new normalization factor?
5. Regarding the driving factors of pharmacy trends indicated in the confidential Supplemental Exhibits, please provide more detail about the impacts to total pharmacy trends from 2014 to 2015 and 2015 to 2016. Additionally, provide quantitative support for the pharmacy trends, such as historical experience or any other details outlining how the trends were developed.
6. What is the basis for the updates to your medical area factors? Provide in more detail about the process of updating the medical area factors and the experience that supports the updates.
7. The-actuarial memorandum has listed the addition of a few community rate loads. Please explain the reason of adding each of these factors and their pricing impact.
8. Regarding the 0.0075 demographic aging factor,
a. Explain why it is necessary to make demographic aging adjustment;
b. Provide more detailed quantitative and qualitative support for its derivation;
c. Provide an example based on a real live case from previous year to illustrate the demographic aging adjustment;
d. What is the impact of implementing the demographic aging factor on the manual rates?
9. How was the cap on utilization dampening determined for PCP, SCP and others, respectively, and explain the reasons for adding the cap.
10. We have observed a $9.5 \%$ increase in the minimum and maximum Mental Health/Substance Use Disorders OAP/PPO Rates from last filing. Please provide more detailed support for such increase, including the experience used for the derivation of the new rates.
11. Please elaborate the pharmacy area factor by base rating area and product type.
12. We have noticed a few new formulary types listed in your filing (e.g., legacy, DRT). What is the reason for the new formulary types, and how are they mapped to your current formulary types?
13. Provide the derivation of the projected federal MLR for 2016, starting with your target loss ratio.
14. Please explain any significant changes in the retention assumptions, and explain how the retention assumptions in this filing compare to experience.

Please respond no later than January 21, 2016.
Our review of filing will be placed in suspense pending your response. Contact me if you have any questions.

Sincerely,
Noonicad Jrang

03/29/2016

Dear Thomas Crompton,
Introduction:

## Response 1

## Comments:

Effective dates for newly approved rates are dependent on updates to the IT rating system. If filing approval is received by 4/6/2016, rates will be applied to any new quote issued after the next update to the IT rating system, which is scheduled for $5 / 16 / 2016$. If approval is received after 4/6/2016, the rating effective date will be deferred to the next available IT rating system update.

## Medical Manual Rating Formulas

## 1 Transform Census

Using experience-based demographic assumptions, transform the employee-level census into a memberlevel census. Skip to Step 2 if the census is already at the member level.

## 2 Calculate Base Medical Claim Costs

Run the members from the census in Step 1 through the calculations in Step 2 to determine in-network (IN) base medical claim costs. For plans with out-of-network (OON) benefits, calculate the base medical claim costs using the methodology outlined in Step 2 but with OON assumptions and benefits. For indemnity plans, calculate all claim costs using only OON assumptions.

Calculate expected claim costs on a per member per month (PMPM) basis.

### 2.1 National Base Claims

National base claim costs for experience-rated business are established for all major service categories (MSCs). The MSCs may be further subdivided into sub-cost categories (SCCs). These are:

- MSC
- Inpatient [Hospital] (IP)
- Outpatient [Hospital] (OP)
- Emergency Room (ER)
- Primary Care Physician (PCP)
- Specialty Care Physician (SCP)
- Other
- Preventive Care
- Pharmacy (if combined with medical)
- SCC
- Facility
- Professional
- Lab
- Radiology
- Advanced Radiology (ARI)

See Table 1 - Medical Base Claims for the current base claim costs for each MSC (both IN and OON).
See Table 2 - MSC Weighting by SCC for the percentage of each MSC composed of each SCC.
Calculate the base claim cost at the SCC level by pulling the base claim costs for each MSC from the applicable pricing table and applying the appropriate weighting for each SCC.

$$
\text { Base Claim Cost by MSC and SCC }=[\text { Base Claim Cost by MSC }] \times[\text { SCC } \%]
$$

The base claim cost by MSC and SCC will be referred to as base claims, with the understanding that they have already been divided into categories. Also, the term service categories will be used to refer to MSCs divided fully into SCCs (e.g., "Inpatient Facility" or "PCP ARI"), while any specific reference to MSCs alone will be clearly noted.

Pharmacy base claims are calculated in Step 6.9.2 and are used to develop medical manual rates (during Step 2.5) only if the plan features combined medical and pharmacy claims.

If preventive care coverage is elected for children only, then the preventive care base claim cost will depend on the elected child age. See Table 3 - Preventive Care Child Age Adjustment to determine what portion of preventive care base claim costs to use.

### 2.2 National Trend

### 2.2.1 Calculate Trend Factor

To establish expected base claim costs for the policy period, the base claim costs from Step 2.1 must be trended forward from the midpoint of the base claim period (the year of experience from which base claims are determined) to the midpoint of the policy period.

In this step, calculate a trend factor based on national trend (to be applied in Step 2.2.2). A trend factor based on area-specific trend is calculated and applied in Step 2.7.

National trend values may be found in Table 4 - National Medical Trend.

- The following dates and values are required:
a. The midpoint of the base claim period
b. The midpoint of the policy period
c. Trend days: days between the midpoint of the base claim period and the midpoint of the policy period. These are the days over which trend must be applied.
- Calculate the actual trend factor to be applied for each year.
a. Each one-year period starting from the midpoint of the base claim period has an associated trend value.
b. Each of those one-year periods contains some number of trend days. The percentage of trend days that fall into each one-year period is the trend exposure percentage for that one-year period.
c. Calculate the actual portion of trend to be applied from each one-year period with:

$$
\text { Trend Factor }=[1+\text { Trend }]^{(\text {Trend Exposure Percentage })}
$$

- The total trend factor is the product of all trend factors.

### 2.2.2 Apply Trend Factor (National)

Apply the total trend factor (for national trend) determined in Step 2.2.1 to the base claims from Step 2.1.

$$
\text { Trended Base Claims }=[\text { Base Claims }] \times[\text { Total Trend Factor (National) }]
$$

### 2.3 Copays - Calculate Effective Copay Percentage

Calculating the cost-share due to copays in Step 2.5 requires the effective copay percentage, which is calculated for each service category as follows:

- Determine:
- Utilization: See Table 5 - National Utilization Rates by MSC for the annual expected utilization rate per member for each MSC.
- SCC Weighting: See Table 2 - MSC Weighting by SCC.
- Copay: Copay dollar amounts (if any) from the plan design.
- Calculate:

$$
\begin{gathered}
\text { Dollar Copay Impact }=\frac{[\text { Utilization }] \times[\text { SCC Weighting }] \times[\text { Copay }]}{12} \\
\text { Effective Copay Percentage }=\frac{\text { Dollar Copay Impact }}{\text { Trended Base Claims (from Step 2.2.2) }}
\end{gathered}
$$

The impact of copays for Mental Health/Substance Use Disorders (MH/SUD) is calculated in Step 4.3.

### 2.4 Effective Deductible and Out-of-Pocket Maximum

Throughout Step 2.5, calculations that require the deductible or out-of-pocket (OOP) maximum will use the effective deductible or effective OOP maximum. An adjustment factor is applied to the plan deductible and OOP maximum in order to arrive at the effective values. These adjustment factors depend on two things:

- The plan deductible (or OOP maximum).
- The ratio of the family deductible to the individual deductible (or OOP maximum).

For the deductible adjustment factor, see Table 7 - Medical Effective Deductible Adjustment.
For the OOP maximum adjustment factor, see Table 8 - Medical Effective OOP Maximum Adjustment.

$$
\text { Effective Deductible }=[\text { Individual Deductible }] \times \text { [Deductible Adjustment Factor] }
$$

Effective OOP Maximum $=$ [Individual OOP Maximum] $\times$ [OOP Maximum Adjustment Factor]

### 2.5 Cost-Share

Overview for this step: Calculate the expected offset to claim costs due to member cost-sharing by modifying the claims probability distribution (CPD) to remove member cost-sharing from total claims.

Steps 2.5.2 through 2.5 .9 provide detail on this process. The modified CPD at a given step will be referred to as the CPD from the step in which the modification occurred. The claims that fall into either member cost-share or Cigna cost-share will be noted.

See Table 9 - Medical Claims Probability Distribution for the full medical CPD (which will also be referred to as the base CPD).

The pharmacy column of the medical CPD is used only if the plan features combined medical and pharmacy claims.

The final member cost-sharing for the preventive care MSC is calculated in Step 2.5.9 and does not use the CPD methodology.

### 2.5.1 Benefits Dependent on Number of Visits

Benefits for a particular service category may change depending on the number of visits. For example, copays could be selected such that one copay amount applies to the first PCP visit while another copay amount applies to any subsequent visits. The change in cost-share for each distinct benefit must be accounted for in calculating final cost-share.

For those service categories, multiply the average cost of a visit (found in Table 10 - Average Visit Cost) by the number of visits at which benefits change (according to the plan design) to get the claims breakpoint. Between each claims breakpoint on the CPD, apply the appropriate cost-share calculation throughout Step 2.5 for the applicable benefit.

### 2.5.2 Base Claim Costs

Split the columns of the base CPD by the appropriate SCC weighting for the MSC (as listed in Table 2 MSC Weighting by SCC). Scale the claims for each service category by the respective trended base claims from Step 2.2.2.

If pharmacy and medical claims are combined, use the 'Estimated Annual Cost' (converted to monthly) from the pharmacy Step 6.9.2 to scale the pharmacy service category.

### 2.5.3 Copays before the Deductible

If copays apply before the deductible, multiply the service categories with copays in the Step 2.5.2 CPD by [1 - Effective Copay Percentage] (calculated in Step 2.3). Otherwise, the service categories are not adjusted.

To find the member cost-sharing from copays (before the deductible), subtract the claims in the Step 2.5.3 CPD from the claims Step 2.5.2 CPD.

### 2.5.4 Deductible

For service categories subject to the deductible, claims below the effective deductible (calculated in Step 2.4) are cost-share for the member. Proportionately remove claims below the effective deductible from the 2.5.3 CPD.

If pharmacy and medical claims are combined and cost share has been waived for certain classes of prescription drugs (e.g., waiving cost share for preventive medications), use the pharmacy CPD (outlined in Table 60, Table 61, and Table 62) to calculate the percentage of pharmacy claims subject to the deductible and only the portion of pharmacy claims that are subject to the deductible are included in the pharmacy service category.

### 2.5.5 Effective Coinsurance

For each service category, calculate the effective coinsurance as a combination of coinsurance and costsharing from copays that apply after the deductible (either or both may apply).

$$
\text { Effective Coinsurance }=[\text { Plan Coinsurance }] \times[1-\text { Effective Copay Percentage (from Step 2.3) }]
$$

If the service category has no copay after the deductible, the effective copay percentage is zero (leaving only coinsurance). If the service category is subject only to a copay after the deductible, the plan coinsurance is one (i.e., all costs beyond the copay are Cigna cost-share).

Multiply the claims for each service category by the applicable effective coinsurance. For service categories that are not subject to the deductible, use the claims from the Step 2.5.3 CPD, and for service categories subject to the deductible, use the claims from the Step 2.5.4 CPD.

If pharmacy and medical claims are combined, use [ 1 - Regular Member Cost Share] from Step 6.9.10 as the effective coinsurance for the pharmacy service category.

### 2.5.6 Out-of-Pocket Maximum

Add up all the components of member cost-share that apply to the OOP maximum. All claims above the effective OOP maximum (calculated in Step 2.4) become Cigna cost-share.

### 2.5.7 Annual Maximum

Add up the Cigna cost-share (claims in the Step 2.5.5 CPD and claims above the OOP maximum from Step 2.5.6). All claims above the annual maximum (if applicable) become member cost-share.

### 2.5.8 Member Cost-Sharing Percentage

Calculate the member cost-sharing percentage for each MSC.
Determine the Cigna cost-share for each MSC. This comprises claims in the Step 2.5.5 CPD and claims above the OOP maximum and below the annual maximum (if applicable) from Steps 2.5.6 and 2.5.7.

$$
\text { Member Cost-Sharing Percentage }=1-\frac{[\text { Cigna Cost-Share }]}{[\text { Trended Base Claims (Step 2.2.2)] }}
$$

If pharmacy and medical claims are combined, the pharmacy trended base claims are the 'Estimated Annual Cost' (converted to monthly) from Step 6.9.2. The pharmacy member cost-sharing percentage is used as the effective member cost-share for pharmacy benefits in Step 6.9.11.

### 2.5.9 Collective Accumulation Adjustment

If the plan features collective accumulation (in the deductible and/or OOP maximum), add a collective accumulation adjustment to each member cost-sharing percentage from Step 2.5.8.

Definition of terms:

- Accumulator: generic term for the deductible or OOP maximum (both if plural)
- Average family size: the ratio of family members to family subscribers
- Deductible multiplier: the ratio of the family deductible to the individual deductible
- OOP maximum multiplier: the ratio of the family OOP maximum to the individual OOP maximum

To calculate the collective accumulation adjustment: using the deductible and OOP maximum from the plan design as rated, determine the accumulators that a family and an individual within a family would experience under the three following scenarios:

- The deductible and OOP maximum are non-collective and the deductible multiplier and OOP maximum multiplier are equal
- The deductible and OOP maximum are collective and the deductible multiplier and OOP maximum multiplier are equal
- The deductible and OOP maximum follow the plan design as rated

For each scenario, determine the effective deductible and OOP maximum that an individual within a family would experience. To do this, multiply the deductible and OOP maximum for an individual within a family by the factors found in Table 13 - Effective Deductible - Collective Accumulation Adjustment and Table 14 - Effective OOP Maximum - Collective Accumulation Adjustment (the factors depend on the individual deductible or OOP, respective multiplier, and average family size). If necessary, interpolate between the nearest multipliers to calculate the adjustment.

For a plan where the deductible is collective and the OOP maximum is non-collective, if the OOP maximum for an individual is less than the family deductible plus $\$ 550$, use Table 15 - Effective Coinsurance - Collective Accumulation Adjustment to determine the effective coinsurance used in this calculation. The table is based on the plan coinsurance and the average family size.

For each scenario, apply the plan coinsurance (or effective coinsurance, if applicable), effective individual deductible, and effective individual OOP maximum to the "Total Annual Claims" column of the Step 2.5.2 CPD to calculate member cost-share. Calculate the accumulation adjustment ratio based on the calculated cost-share for the non-collective, collective, and plan scenarios as follows:

$$
\text { Accumulation Adjustment Ratio }=\frac{[\text { Plan Cost-Share }]-[\text { Non-Collective Cost-Share }]}{[\text { Collective Cost-Share }]-[\text { Non-Collective Cost-Share }]}
$$

From Table 16 - Collective Deductible Adjustment, determine the collective deductible adjustment based on the average family size, the deductible multiplier, and the individual deductible. If necessary, linearly interpolate between the appropriate nearest deductibles to find the correct decrement. Calculate:

$$
\text { Single to Total Member Ratio }=\frac{[\text { Count of Subscribers Without Dependents }]}{[\text { Total Members }]}
$$

Then
Collective Deductible Adjustment $=[1-$ Single to Total Member Ratio $] \times$ [Collective Decrement $]$
And

> Collective Accumulation Adjustment
> $\quad=$ [Collective Deductible Adjustment $] \times$ [Accumulation Adjustment Ratio $]$

### 2.5.10 Final Member Cost-Sharing Percentage

If applicable, add the collective accumulation adjustment from Step 2.5.9 to the Step 2.5.8 member costsharing percentage to get the final member cost-sharing percentage. If the plan does not have collective accumulation, the final member cost-sharing percentage is equal to the percentage calculated in Step 2.5.8.

If preventive care is covered with cost-sharing, the final member cost-sharing percentage for the preventive care MSC is calculated as a blend of the PCP and SCP final member cost-sharing percentages. See Table 11 - Preventive Care Cost-Share Weighting for the appropriate weights.

The total member cost-sharing percentage is a weighted average of the final member cost-sharing percentages across all MSCs.

### 2.5.11 Apply Cost-Sharing Offset

Apply the final member cost-sharing percentage from Step 2.5.9 to the trended base claims from Step 2.2.2.

Cost-Sharing Adjusted Claims $=[1-$ Final Member Cost-Sharing Percentage $] \times$ [Trended Base Claims $]$

### 2.6 Utilization Dampening

### 2.6.1 Calculate Utilization Dampening

Determine the utilization dampening to apply to each MSC. Values for this calculation are found in Table 12 - Medical Utilization Dampening. The preventive care MSC is not subject to utilization dampening.

Calculate utilization dampening for each MSC using the applicable final member cost-sharing percentage calculated in Step 2.5.9 and the appropriate values (A, B and C) from the table.

$$
\text { Utilization Dampening }=e^{(\mathrm{A} \times \text { Cost-Sharing }+\mathrm{B})}+\mathrm{C}
$$

### 2.6.2 Apply Utilization Dampening Factor

Apply the Utilization Dampening from Step 2.6.1 to the Cost-Sharing Adjusted Claims from Step 2.5.11.
Utilization Dampening Adjusted Claims $=[$ Utilization Dampening $] \times$ [Cost-Sharing Adjusted Claims]

### 2.7 Area-Specific Trend Relativity

### 2.7.1 Calculate Area-Specific Trend Relativity

Calculate the trend factor based on area-specific trend for the plan rating area using the methodology found in Step 2.2.1.

Area-specific trend is found in Table 28 - Medical Trend and Capitation (with additional summary detail provided in Table 29 - Medical Trend Summary).

Divide the area-specific trend factor by the trend factor based on national trend from Step 2.2.1 to find the area-specific trend relativity.

$$
\text { Area-Specific Trend Relativity }=\frac{\text { [Area-Specific Trend Factor }]}{[\text { National Trend Factor }]}
$$

### 2.7.2 Apply Area-Specific Trend Relativity

Apply the area-specific trend relativity from Step 2.7.1 to the utilization dampening adjusted claims from Step 2.6.2.

Area Trend Adjusted Claims $=$ [Area-Specific Trend Relativity] $\times$ [Utilization Dampening Adjusted Claims]

### 2.8 Base Medical Community Rate

### 2.8.1 Calculate Medical Community Rate Load

Multiply together all applicable community rate loads from Table 17 - Community Rate Loads and the area factor for the plan rating area found in Table 26 - Medical Area Factors (with additional summary detail in Table 27 - Medical Area Factor Summary) to get the medical community rate load.
2.8.2 Apply Medical Community Rate Load

Apply the medical community rate load from Step 2.8.1 to the area trend adjusted claims from Step 2.7.2.
Base Medical Community Rate $=$ [Medical Community Rate Load] $\times$ [Area Trend Adjusted Claims]

## 3 Base Medical Community Rate by Class

### 3.1 Blending Medical Rates

### 3.1.1 Calculate Blended Community Rate

For products with IN and OON components, this step blends the IN and OON base medical claim costs to create one overall rate.

Use a point-of-service (POS) load methodology to apply a load (which is based on area, product, and the IN and OON cost-share differential) to IN claims to calculate blended expected IN and OON claims. If a product is capitated, the POS load will only apply to the non-capitated portion of base medical claims.

The POS load calculation proceeds as follows:

1. Calculate the difference in cost-sharing percentages between OON and IN components. These cost-sharing percentages are the total member cost-sharing percentages (for IN and OON, respectively) from Step 2.5.8. The differential cannot be less than zero or greater than one.

$$
\text { Cost-Share Differential }=[\text { OON Cost-Sharing Percentage }]-[\text { IN Cost-Sharing Percentage }]
$$

2. Find the appropriate coefficients (A, B, and C) in Table 31 - POS Load Coefficients (with additional summary detail in Table 32 - POS Load Coefficients Summary) and calculate the base POS load.

$$
\text { Base POS Load }=A \times[\text { CSDiff }]^{2}+B \times[\text { CSDiff }]+C
$$

If the base POS load is less than zero or the plan is an indemnity plan, the base POS load is set to zero.
3. Determine the applicable OON savings program for the plan and apply the appropriate factor from Table 18 - Medical OON Program Savings Factors to the base POS load. If necessary, interpolate between table values to find the OON savings program factor.

$$
\text { POS Load }=[\text { Base POS Load }] \times[\text { OON Savings Program Factor }]
$$

4. Apply the POS load to the IN base medical community rate from Step 2.8.2.

$$
\text { Blended Community Rate }=[1+\text { POS Load }] \times[\text { IN Base Medical Community Rate }]
$$

### 3.1.2 Calculate IN and OON Utilization

The expected OON utilization is used in the adjustment for Cigna Care Network tiered benefits. This requires the POS load calculated in Step 3.1.1 and the IN and OON base medical community rates calculated in Step 2.8.2. If the product is capitated, only use the non-capitated portion of the IN base medical community rate. If the calculation yields an IN Utilization greater than $100 \%$ or less than $0 \%$, the IN Utilization is set to one and no POS load is applied.

$$
\begin{gathered}
\text { IN Utilization }=\frac{[\text { POS Load }] \times[\text { IN Rate }]-[\text { OON Rate }]}{[\text { IN Rate }]-[\text { OON Rate }]} \\
\text { OON Utilization }=1-\text { IN Utilization }
\end{gathered}
$$

### 3.2 Lifetime Maximum Adjustment

If the plan features a lifetime maximum, the appropriate adjustment is found in Table 19 - Lifetime Maximum Adjustment and will be applied in Step 3.5.

### 3.3 Industry Load

Calculate the applied industry load.

- Select the appropriate industry load from Table 20 - Industry Load based on the Standard Industrial Classification code of the group being priced.
- If applicable, determine the capitation percentage from Table 28 - Medical Trend and Capitation (with additional summary detail in Table 30 - NWK Percent Capitated Summary).

Adjusted Industry Load $=[$ Industry Load -1$] \times[1-$ Capitation Percentage $]$

$$
\text { Applied Industry Load }=1+\text { Adjusted Industry Load }
$$

### 3.4 Demographic Factor

Determine the demographic factor from Table 21 - Medical Demographic Factors for the member based on sex, age, and status (i.e. employee, spouse, or child).

To calculate the demographic aging adjustment, multiply the demographic aging trend found in Table 22 - Demographic Aging Trend by the number of years between the date the census is evaluated and the midpoint of the policy period, then add one. Multiply the demographic factor by the demographic aging adjustment to calculate the applied demographic factor.

### 3.5 Calculate Base Medical Community Rate by Class

Calculate the base medical community rate by class by multiplying together the following:

- Blended community rate from Step 3.1.1
- Lifetime maximum adjustment from Step 3.2
- Applied industry load from Step 3.3
- Applied demographic factor from Step 3.4

## 4 Calculate Claim Costs for Other Benefits

### 4.1 Riders

### 4.1.1 Medical Riders

Determine the total claim cost for applicable riders (calculated on a PMPM basis).
Determine base rider claim costs.

- See Table 25 - Medical Riders for the methodology and values required to calculate base medical rider claim costs.

Multiply the base rider claim costs by the trend factor, rider load, applied industry load, and applied demographic factor to determine total rider claim costs.

- The trend factor is the area-specific trend factor from Step 2.7.
- The rider load is calculated the same way as the community rate load from Step 2.8.1 using only applicable loads.
- $\quad$ The applied industry load is calculated in Step 3.3.
- The applied demographic factor is calculated in Step 3.4. The infertility riders have their own demographic factors to use in the calculation. These factors may be found in Table 23 - Infertility Rider Demographic Factors.

### 4.1.2 Vision Rider

Determine the vision rider claim cost PMPM, if applicable. See Appendix F: Vision Riders for all values required for this calculation.

1. For each applicable category of coverage found in Table 38 - Vision: Average Costs, calculate the coverage allowance. If a category is not covered, the coverage allowance is $\$ 0$.

$$
\text { Coverage Allowance }=\min ([\text { Average Cost], [Allowance Per Plan Design] })
$$

2. Multiply the coverage allowance by the frequency factor found in Table 39 - Vision: Frequency Factors and the utilization percentage found in Table 40 - Vision: Service Utilization to calculate the preliminary claims cost. Sum the preliminary claims costs across all categories of coverage to determine the overall preliminary claims cost.

$$
\text { Preliminary Claims Cost }=[\text { Coverage Allowance }] \times[\text { Frequency Factor }] \times[\text { Utilization }]
$$

3. Multiply the overall preliminary claims cost by the industry factor, case size adjustment, and trend factor to calculate the vision rider claim cost per employee per year (PEPY). The industry factor, case size adjustment, and annual trend used for the trend factor are found in Table 41 - Vision: Trend and Adjustments.

Vision Rider Claim Cost PEPY

$$
=[\text { Preliminary Claims Cost }] \times[\text { Industry Factor }] \times[\text { Case Size Adj }] \times[\text { Trend Factor }]
$$

4. Divide the vision rider claim cost PEPY by 12 and by the ratio of members to employees to calculate the vision rider claim cost PMPM.

### 4.2 Health Management Program Savings

Using the values in Table 24 - Health Management Program Savings, calculate the expected claim cost savings for applicable health management programs.

- To calculate expected savings for Your Health First, multiply the decrement in the table by the sum of the blended medical community rate from Step 3.1.1 and the rider claim cost (before demographic and industry factors are applied). Then multiply by the applied industry load from Step 3.3 and the applied demographic factor from Step 3.4.
- To calculate expected savings for Healthy Pregnancies, Healthy Babies and Comprehensive Oncology, trend the PMPM dollar amounts in the table using the area-specific trend factor from Step 2.7, and then multiply by the applied industry load from Step 3.3 and the applied demographic factor from Step 3.4.
- To calculate expected savings for Health Advisor and Personal Health Team, use the PEPM dollar amounts in the table.

### 4.3 Mental Health/Substance Use Disorders

Determine the MH/SUD claim cost. See Appendix E: Mental Health/Substance Use Disorders for rates, trend, and adjustments. Note that the MH/SUD cost calculation uses an MH/SUD-specific trend and that the base claim cost varies within the given range based on plan deductible, copays, and coinsurance.

MH/SUD is ordinarily a capitated product but can be covered as fee-for-service (FFS). If it's covered as FFS, apply the FFS adjustment, otherwise apply only trend to the MH/SUD base claim cost.

$$
\text { MH/SUD Claim Cost }=[\text { MH/SUD Base Claim Cost }] \times[1+\text { Trend }] \times[1+\text { FFS Adjustment }]
$$

### 4.4 Medicare Coordination of Benefits

Rates for post-65 Medicare-eligible retirees are adjusted to reflect the coordination of benefits (COB) with Medicare.

The Medicare COB adjustment is based on the percentage of Medicare-eligible members in the population being rated, the age, sex, and geographic location of the membership, the coordination of benefits method being applied, the underlying medical product type, and the plan deductible, coinsurance, copay, OOP maximum, and other cost-sharing.

## 5 Aggregate Medical Claim Costs

Sum the following to calculate the total medical claim cost for the individual:

- The base medical community rate by class from Step 3.5.
- The total rider claim cost from Step 4.1.
- The claim cost savings from health management programs from Step 4.2.
- The MH/SUD claim cost from Step 4.3.

Combine the individual claim costs for the entire census to determine the aggregate medical claim cost (on a PMPM basis):

$$
\text { Aggregate Medical Claim Cost }=\frac{\text { Sum of Individual Claim Costs }}{\text { Total Members }}
$$

## Pharmacy Manual Rating Formulas

Use this section to calculate expected pharmacy claim costs.
The following formulas detail the pharmacy claim cost calculation process. The specific steps are applied to each pharmacy cost category, except as specifically noted. There are no separate provisions made for OON pharmacy benefits. All benefits are assumed to be IN. Claim costs for each individual life are calculated separately and the results are aggregated. Where noted, a separate set of assumptions or calculations are used for cases run on the FACETS platform.

## 6 Pharmacy Rating Step-by-Step

### 6.1 Extract the Average Wholesale Price (AWP) per Script

Extract the AWP per script by cost category for both retail and mail order based on the formulary type (Standard, Value, Performance, Advantage, or Generics Only). All formularies are open. Separate assumptions exist for the FACETS platform. The AWP per script assumptions are found in the following tables:

- Table 42 - Retail AWP per Script Assumptions
- Table 43 - Mail Order AWP per Script Assumptions
- Table 69 - FACETS Retail AWP per Script Assumptions
- Table 70 - FACETS Mail Order AWP per Script Assumptions

### 6.2 Apply the Discount

Discounts are applied to the AWP per script calculated in Step 6.1 based on retail pharmacy network, funding type/product (HMO, non-HMO, or experience rated) and employer size. Please note that separate assumptions exist for the FACETS platform, which vary only by pricing package. The discount assumptions are found in the following tables:

- Table 46 - Retail Discounts and Dispensing Fees (National Network)
- Table 47 - Retail Discounts and Dispensing Fees (National Network without CVS)
- Table 48 - Retail Discounts and Dispensing Fees (National Network without Walgreens)
- Table 49 - Retail Discounts and Dispensing Fees (National Network without CVS \& Walgreens)
- Table 73 - FACETS Retail Discounts and Dispensing Fees
- Table 74 - FACETS Mail Order Discounts and Dispensing Fees

The discount assumptions vary by drug source (retail or mail order) and drug type (generic, brand, or specialty). Discounts also vary by calendar year, so discount assumptions are averaged for policy years that cross multiple calendar years:

## Average Discount

$=(2014$ Calendar Year Discount $\times \%$ of Policy Year in 2014)

+ (2015 Calendar Year Discount $\times \%$ of Policy Year in 2015)
+ (2016 Calendar Year Discount $\times \%$ of Policy Year in 2016)
$+(2017$ Calendar Year Discount $\times \%$ of Policy Year in 2017)
In addition, separate discounts may apply for 90 -day retail scripts. If the 90 -day retail option is selected, retail discounts are further adjusted:

Adjusted Retail Average Discount
$=30$-Day Retail Average Discount $\times$ ( $1-\%$ of Retail from 90-Day)
+90 -Day Retail Average Discount $\times \%$ of Retail from 90-Day
where
\% of Retail from 90-Day

$$
\begin{aligned}
& =[(\text { Retail Script Count } \times 30-\text { Day Retail Shift to } 90-\text { Day Retail }) \\
& +(\text { Mail Order Script Count } \times \text { Mail Order Shift to } 90 \text {-Day Retail } \times \text { Mail Order Multiplier })] \\
& \div \text { Retail Script Count }
\end{aligned}
$$

The 90-day retail shift assumptions and mail order multiplier are found in the following tables:

- Table 54 - Shift Assumptions for Plans with 90-Day Retail
- Table 55 - Mail Order Multiplier Assumption

If a product is selected where multiple drug types are included in a particular tier, a blended discount must be calculated. The following example describes how a blended discount would be calculated if nonpreventive generics and preferred brand drugs were in the same tier:

Blended Discount for Tier with Non-Preventive Generics and Preferred Brands
$=[($ Non-Preventive Generic Script Count $\times$ Non-Preventive Generic AWP per Script
$\times$ Generic Discount)

+ (Preferred Brand Script Count $\times$ Preferred Brand AWP per Script $\times$ Brand Discount)]
$\div[($ Non-Preventive Generic Script Count $\times$ Non-Preventive Generic AWP per Script)
+ (Preferred Brand Script Count $\times$ Preferred Brand AWP per Script)]
Once the discounts are determined, apply them to AWP per script calculated in Step 6.1:
Step 6.2 Discounted AWP per Script $=$ Step 6.1 AWP per Script $\times(1-$ Discount $)$

### 6.3 Calculate Gross Cost per Script

Dispensing fees are added to the discounted AWP per script calculated in Step 6.2 based on retail pharmacy network, funding type/product (HMO, non-HMO, or experience rated) and employer size. Separate assumptions exist for the FACETS platform, which vary only by pricing package. The dispensing fee assumptions are found in the following tables:

- Table 46 - Retail Discounts and Dispensing Fees (National Network)
- Table 47 - Retail Discounts and Dispensing Fees (National Network without CVS)
- Table 48 - Retail Discounts and Dispensing Fees (National Network without Walgreens)
- Table 49 - Retail Discounts and Dispensing Fees (National Network without CVS \& Walgreens)
- Table 73 - FACETS Retail Discounts and Dispensing Fees
- Table 74 - FACETS Mail Order Discounts and Dispensing Fees

The dispensing fee assumptions vary by drug source (retail or mail order) and drug type (generic, brand, or specialty). Dispensing fees also vary by calendar year, so dispensing fee assumptions are averaged for policy years that cross multiple calendar years:

Average Dispensing Fee
$=(2014$ Calendar Year Dispensing Fee $\times \%$ of Policy Year in 2014)

+ (2015 Calendar Year Dispensing Fee $\times \%$ of Policy Year in 2015)
+ (2016 Calendar Year Dispensing Fee $\times \%$ of Policy Year in 2016)
$+(2017$ Calendar Year Dispensing Fee $\times \%$ of Policy Year in 2017)
In addition, separate dispensing fees apply for 90-day retail scripts. If the 90-day retail option is selected, retail dispensing fees are further adjusted:

Adjusted Retail Average Dispensing Fee
$=30$-Day Retail Average Dispensing Fee $\times$ ( $1-\%$ of Retail from 90-Day)

+ 90-Day Retail Average Dispensing Fee $\times \%$ of Retail from 90-Day
where
\% of Retail from 90-Day
$=[($ Retail Script Count $\times 30-$ Day Retail Shift to $90-$ Day Retail $)$
+ (Mail Order Script Count $\times$ Mail Order Shift to 90 -Day Retail $\times$ Mail Order Multiplier) $]$
$\div$ Retail Script Count
The 90-day retail shift assumptions and mail order multiplier are found in the following tables:
- Table 54 - Shift Assumptions for Plans with 90-Day Retail
- Table 55 - Mail Order Multiplier Assumption

Sales tax is not included in the gross cost per script calculation because of insignificance, so once the dispensing fees are determined, add them to the discounted AWP per script calculated in Step 6.2:

Step 6.3 Gross Cost per Script $=$ Step 6.2 Discounted AWP per Script + Dispensing Fee per Script

### 6.4 Calculate and Apply the Cost Trend Factor

The gross cost per script calculated in Step 6.3 was developed using assumptions from the base claim period. To establish expected costs for the policy period, the gross cost per script must be trended forward from the midpoint of the base claim period to the midpoint of the policy period. Area-specific trends should be used, if applicable, to determine the unit cost trend factor. Otherwise, the national trend should be used. Unit cost trend assumptions are found in the following table:

- Table 57 - Pharmacy: Cost Trend

Determine the number of days from the midpoint of the base claim period to the midpoint of the policy period ("trend days"). The base claim period midpoint is estimated as 182.5 days after the base claim effective date. The policy period midpoint is the average of the policy effective date and the policy end date.

Each year following the base claim period midpoint is a trend year and has an associated unit cost trend factor. Determine the number of trend days that fall into each trend year and divide by the total days in the trend year to arrive at the portion of each trend year applicable to the case being rated ("exposure percentage"). Now the adjusted unit cost trend factor can be calculated for each trend year:

Adjusted Unit Cost Trend Factor $=(1+\text { Trend Year Unit Cost Trend Factor })^{\text {Exposure Percentage }}$
The final unit cost trend factor is the product of the adjusted unit cost trend factors for each trend year. The following example outlines the unit cost trend factor calculation using national trend values:
$a=$ Base claim effective date $=1 / 1 / 2014$
$b=$ Policy effective date $=4 / 1 / 2016$
c $=$ Policy end date $=3 / 31 / 2017$
d = Annual cost trend factor for 2015/2014 = 10.34\%
e = Annual cost trend factor for 2016/2015 = 12.34\%
$\mathrm{f}=$ Annual cost trend factor for 2017/2016 = 12.34\%
$\mathrm{g}=$ Base claim period midpoint $=\mathrm{a}+182.5$ days $=7 / 2 / 2014$
$h=$ Policy period midpoint $=(b+c) \div 2=9 / 30 / 2016$
$\mathrm{i}=$ Total trend days $=\mathrm{g}-\mathrm{f}=820$

$$
\begin{aligned}
& \mathrm{j}=\text { Trend days from } 2014 \text { to } 2015=363.5 \\
& \mathrm{k}=\text { Trend days from } 2015 \text { to } 2016=366 \\
& \mathrm{I}=\text { Trend days from } 2016 \text { to } 2017=91.5
\end{aligned}
$$

Final Unit Cost Trend Factor $=(1+d)^{\frac{j}{365}} \times(1+e)^{\frac{k}{366}} \times(1+f)^{\frac{l}{365}}$

$$
=1.1034^{0.996} \times 1.234^{1} \times 1.234^{0.25}=1.276
$$

Once the final unit cost trend factor is determined, apply it to the gross cost per script calculated in Step 6.3:

Step 6.4 Trended Gross Cost per Script $=$ Step 6.3 Gross Cost per Script $\times$ Final Unit Cost Trend Factor

### 6.5 Extract the Annual Script Counts Per Member

Extract the annual script counts per member (script count per member per year [PMPY]) by cost category for both retail and mail order based on the formulary type (Standard, Value, Performance, Advantage, or Generics Only). Pull in script counts for optional cost categories, such as lifestyle drugs, as needed. If an optional cost category has not been selected, set the script count to zero. Please note that separate assumptions exist for the FACETS platform. The script count assumptions are found in the following tables:

- Table 44 - Retail Script Count PMPY Assumptions
- Table 45 - Mail Order Script Count PMPY Assumptions
- Table 71 - FACETS Retail Script Count PMPY Assumptions
- Table 72 - FACETS Mail Order Script Count PMPY Assumptions

Script counts are adjusted when the mandatory generic program is selected:
Adjusted Generic Script Count
= Generic Script Count

+ (Non-Preferred Brand Multi-Source Script Count $\times$ Mandatory Generic Shift Factor)
Adjusted Non-Preferred Brand Multi-Source Script Count
$=$ Non-Preferred Brand Multi-Source Script Count $\times$ ( $1-$ Mandatory Generic Shift Factor)
Scripts that are shifted from the non-preferred brand multi-source category to the generic category are assumed to be proportionately distributed between the preventative generic and non-preventative generic buckets. If specialty drugs are rated on a $4^{\text {th }}$ tier, no specialty drug utilization is expected to shift to the generic category. The mandatory generic shift factor is found in the following table:
- Table 56 - Mandatory Generic Shift Factor

Script counts are also adjusted if the 90-day retail option is selected:
Adjusted Retail Script Count
$=$ Retail Script Count + (Mail Order Script Count $\times$ Mail Order Shift to 90-Day Retail
$\times$ Mail Order Multiplier)
Adjusted Mail Order Script Count $=$ Mail Order Script Count $\times(1-$ Mail Order Shift to 90 -Day Retail)
If both the mandatory generic program and 90 -day retail option are selected, script counts are first adjusted for the mandatory generic program and then the 90 -day retail option.

### 6.6 Calculate and Apply Utilization Trend Factor

The script counts calculated in Step 6.5 were developed using assumptions from the base claim period. To establish expected costs for the policy period, the script counts must be trended forward from the midpoint of the base claim period to the midpoint of the policy period. Area-specific trends should be used, if applicable, to determine the unit cost trend factor. Otherwise, the national trend should be used. Utilization trend assumptions are found in the following table:

- Table 58 - Pharmacy: Utilization Trend

Calculate the utilization trend factor by re-running Step 6.4 with the utilization trend factors. Once the final utilization trend factor is determined, apply it to the script counts calculated in Step 6.5:

Step 6.6 Trended Script Count PMPY $=$ Step 6.5 Script Count PMPY $\times$ Final Utilization Trend Factor

### 6.7 Calculate Gross Trended PMPM

Calculate the gross trended cost PMPM by multiplying the trended script count by gross trended cost per script and dividing by 12 (since script counts are PMPY):

Step 6.7 Gross Trended PMPM
$=\frac{\text { Step 6.4 Trended Gross Cost per Script } \times \text { Step 6.6 Trended Script Count PMPY }}{12}$

### 6.8 Calculate Gross Area-Adjusted PMPM

The gross trended PMPM is adjusted for cost differences by area. The area factors are found in the following table:

- Table 59 - Pharmacy: Area Factors

Extract the area factor based on the site and funding type/product (HMO, non-HMO, experience rated NWK, experience rated non-NWK) being rated and apply it to the gross trended cost PMPM calculated in Step 6.7:

Step 6.8 Gross Area-Adjusted PMPM $=$ Step 6.7 Gross Trended PMPM $\times$ Pharmacy Area Factor

### 6.9 Calculate Regular Member Cost Share Using Pharmacy CPD

The pharmacy CPD is composed of the following tables:

- Table 60 - Pharmacy: CPD (\% Preventive)
- Table 61 - Pharmacy: CPD (Cost per Script)
- Table 62 - Pharmacy: CPD (Scripts PMPY)

Unless otherwise specified, weighted averages mentioned in Step 6.9 are calculated using the probabilities in the pharmacy CPD.

Begin the member cost share calculation by extracting the copays, coinsurance, deductible, applicable deductible waivers, OOP maximum, and plan maximum for the plan design being rated.

### 6.9.1 Adjust CPD to Appropriate Rate Level

Scale the cost per script and script counts PMPY for each row and tier of the pharmacy CPD to reflect the expected cost and utilization derived in Steps 6.1 through 6.6:

Step 6.9.1 Scaled Cost per Script $=$ Original CPD Cost per Script $\times$ Cost per Script Scalar
Step 6.9.1 Scaled Script Count PMPY $=$ Original CPD Script Count PMPY $\times$ Script Count PMPY Scalar
where
Cost per Script Scalar $=$ Step $6.4 \div$ Original CPD Weighted Average Cost per Script
Script Count PMPY Scalar $=$ Step $6.6 \div$ Original CPD Weighted Average Script Count PMPY

### 6.9.2 Calculate Annual Cost

Determine the annual cost for each row and tier using the scaled pharmacy CPD from Step 6.9.1. In addition, the tiers should be further split into preventive and non-preventive using Table 60 - Pharmacy: CPD (\% Preventive):

Step 6.9.2 Preventive Gross Trended PMPY
$=$ Step 6.9.1 Scaled Cost per Script $\times$ Step 6.9.1 Scaled Script Count PMPY $\times \%$ Preventive
Step 6.9.2 Non-Preventive Gross Trended PMPY
$=$ Step 6.9.1 Scaled Cost per Script $\times$ Step 6.9.1 Scaled Script Count PMPY $\times(1-\%$ Preventive $)$
If specialty drugs are rated on a $4^{\text {th }}$ tier, all specialty utilization is assumed to be non-preventative.
In addition, calculate the total annual cost for each row as the sum of the preventive and non-preventive gross trended PMPY values:

Step 6.9.2 Total Annual Cost
$=$ Sum(Step 6.9.2 Preventive Gross Trended PMPY, Step 6.9.2 Non-Preventive Gross Trended PMPY)
Finally, calculate the estimated annual cost across all rows and tiers as the weighted average of the Step 6.9.2 Total Annual Cost:

Step 6.9.2 Estimated Annual Cost $=$ Sum(Step 6.9.2 Total Annual Cost $\times$ Probability $)$

### 6.9.3 Calculate Deductible and Deductible Waiver Impacts

Compare the applicable annual cost for each row to the deductible to see how much of the deductible applies for each row. If the deductible is waived for preventive drugs or certain tiers, do not include those costs in the applicable annual cost for each row:

Step 6.9.3 Deductible Applied $=$ Min[Applicable Annual Cost, Deductible]
where
Applicable Annual Cost $=$ Step 6.9.2 Total Annual Cost - Sum(Waived Step 6.9.2 Gross Trended PMPY)
For plans with a combined deductible, no deductible is assumed. Instead the impact of the combined deductible is calculated using the combined medical and pharmacy CPD.

### 6.9.4 Calculate Percentage of Cost Remaining after Applying Deductible

Calculate the percentage of total annual cost remaining after applying the deductible for each cell of the CPD:

Step 6.9.4 Percentage of Cost Remaining $=1-\frac{\text { Step 6.9.3 Deductible Applied }}{\text { Step 6.9.2 Total Annual Cost }}$

### 6.9.5 Calculate the effective value of copays and coinsurance

Define the effective copay as the member cost per script after copays, coinsurance, maximum copays, minimum copays and the cost per script are considered.

For tiers with copays:
Step 6.9.5 effective copay
$=$ Min[Copay, step 6.9.1 Scaled Cost per Script]
For tiers with coinsurance:

Step 6.9.5 effective copay
= Min\{ Max[ Member Coinsurance x step 6.9.1 Scaled Cost per Script, minimum copay] , maximum copay

### 6.9.6 Adjust Copays for Costs Covered by the Deductible

For each cell of the CPD, multiply the effective value of copays by the portion of costs remaining after the deductible has been applied

Step 6.9.6 Member Copay Value $=$ Step 6.9.4 Percentage of Cost Remaining x Step 6.9.5 Effective Copay

### 6.9.7 Calculate Annual Member Cost Share

Determine the annual member cost share for each row due to copays, coinsurance, and deductible:
Step 6.9.7 Annual Member Cost Share
$=$ Sum(Step 6.9.6 Member Copay Value $\times$ Step 6.9.1 Scaled Script Count PMPY)

+ Step 6.9.3 Deductible Applied
6.9.8 Adjust for Out-of-Pocket (0OP) Maximum

Adjust the annual member cost share calculated in Step 6.9.7 for each row to reflect the impact of an OOP maximum, if applicable:

Step 6.9.8 Member Cost Share after 00P Max $=$ Min[OOP Max, Step 6.9.7 Annual Member Cost Share]
For plans with a combined OOP maximum, no OOP maximum is assumed. Instead the impact of the combined OOP maximum is calculated using the combined medical and pharmacy CPD.

### 6.9.9 Adjust for Plan Maximum

Adjust the member cost share after OOP max calculated in Step 6.9.8 for each row to reflect the impact of a plan maximum, if applicable:

Step 6.9.9 Member Cost Share after 00P Max \& Plan Max

### 6.9.10 Calculate Regular Member Cost Share

Determine the regular member cost share as the ratio of the estimated annual member cost to the estimated total cost:

Step 6.9.10 Regular Member Cost Share
$=\frac{\text { Weighted Average(Step 6.9.9 Member Cost Share after 00P Max \& Plan Max) }}{\text { Step 6.9.2 Estimated Annual Cost }}$

### 6.9.11 Calculate Effective Member Cost Share

For plans with a combined deductible and/or combined OOP maximum, the regular member cost share calculated in Step 6.9.10 is used in Step 2.5 to determine the effective member cost share for the pharmacy benefit.

For all other plans, the effective member cost share is set equal to the regular member cost share calculated in Step 6.9.10.

### 6.10 Calculate Adjusted Cost Share

Optional cost categories, such as lifestyle drugs, may be moved to the fourth tier. For optional cost categories moved to the fourth tier, increase the effective member cost share calculated in Step 6.9.11 by $5 \%$ to estimate the increased cost sharing in the fourth tier. Otherwise, use the effective member cost share.

Moving an optional cost category to the fourth tier should always increase the cost share for that class, but it will have minimal impact to overall rates because of low utilization levels.

Step 6.10 Adjusted Member Cost Share $=$ Step 6.9.11 Effective Member Cost Share $\times 1.05$
Please note that this step does not apply to the FACETS platform.

### 6.11 Calculate Net Pharmacy PMPM

Now that member cost share has been calculated, determine the remaining pharmacy plan cost (or net pharmacy PMPM).

For all standard cost categories and any optional cost categories that have not been moved to the fourth tier, apply the effective member cost share from Step 6.9.11:

Step 6.11 Net Pharmacy PMPM

$$
=\text { Step 6.8 Gross Area-Adjusted PMPM } \times(1-\text { Step 6.9.11 Effective Member Cost Share })
$$

For optional cost categories that have been moved to the fourth tier, apply the adjusted member cost share from Step 6.10:

Step 6.11 Net Pharmacy PMPM

$$
\text { = Step 6.8 Gross Area-Adjusted PMPM } \times(1-\text { Step 6.10 Adjusted Member Cost Share })
$$

### 6.12 Calculate Aggregate Metrics

Many of the following summary metrics are used for analysis purposes and visibility, but do not impact the final rate. Metrics that do impact the final rate will be referenced in later steps.

### 6.12.1 Average AWP per Script

Calculate the average AWP per script across all cost categories as a weighted average using the trended script counts from Step 6.6 as the weights:

Step 6.12.1 Average AWP per Script $=\frac{\text { Sum(Step 6.1 AWP per Script } \times \text { Step 6.6 Trended Script Count PMPY) }}{\text { Sum(Step 6.6 Trended Script Count PMPY) }}$

### 6.12.2 Average Discounted AWP per Script

Calculate the average discounted AWP per script using the method for calculating the average AWP per script in Step 6.12.1.

### 6.12.3 Average Dispensing Fee per Script

Calculate the average dispensing fee per script using the method for calculating the average AWP per script in Step 6.12.1.

### 6.12.4 Average Discount

Derive the average discount using the average AWP per script from Step 6.12.1 and the average discounted AWP per script from Step 6.12.2:

Step 6.12.4 Average Discount $=1-\frac{\text { Step 6.12.2 Average Discounted AWP per Script }}{\text { Step 6.12.1 Average AWP per Script }}$

### 6.12.5 Average Cost Trend Factor, Utilization Trend Factor, and Area Factor

The trend factors and area factor are the same for all cost categories, so their average is the same as the individual factors.

### 6.12.6 Average Gross Cost per Script and Trended Gross Cost per Script

The average gross cost per script and trended gross cost per script are calculated using the method for calculating the individual cost categories:

Step 6.12.6 Average Gross Cost per Script
= Step 6.12.2 Average Discounted AWP per Script + Step 6.12.3 Average Dispensing Fee per Script
Step 6.12.6 Average Trended Gross Cost per Script
$=$ Step 6.12.6 Average Gross Cost per Script $\times$ Step 6.12.5 Average Cost Trend Factor
6.12.7 Total Script Counts, Trended Script Counts, Gross Trended PMPM, Gross Area-Adjusted PMPM, and Net Pharmacy PMPM

Calculate the total for each metric as the sum across all cost categories for the respective metric.

### 6.12.8 Average Adjusted Cost Share

Derive the average adjusted member cost share using the total net pharmacy rate and total gross areaadjusted PMPM from Step 6.12.7:

Step 6.12.8 Average Adjusted Member Cost Share $=1-\frac{\text { Step 6.12.7 Total Net Pharmacy PMPM }}{\text { Step 6.12.7 Total Gross Area-Adjusted PMPM }}$
All calculations going forward are done on an aggregate basis only, so calculations are no longer split into cost categories.

### 6.13 Apply the Clinical Program Factor

Calculate the clinical program factor as the sum of the individual clinical programs selected. The applicable factors for various clinical programs are found in the following tables:

- Table 64 - Pharmacy: Clinical Management Programs
- Table 63 - Global Step Therapy Program

The global step therapy program varies by formulary type and the level of intervention. If no intervention is desired for a particular drug therapy category, do not include a factor for that category when calculating the clinical program factor.

Apply the clinical program factor to the net pharmacy rate from Step 6.12.7:
Step 6.13 Clinical-Adjusted Net Pharmacy PMPM
$=$ Step 6.12.7 Net Pharmacy PMPM $\times$ ( $1-$ Clinical Program Factor $)$

### 6.14 Apply the Pharmacy Demographic Factor

Extract the pharmacy demographic factor from Table 65 - Pharmacy: Demographic Factors based on the age, gender, and status (employee, spouse, or child) of the individual being rated. Unisex factors exist if gender is not a permitted rating variable. Multiply the pharmacy demographic factor by the demographic aging adjustment calculated in Step 3.4 to calculate the adjusted pharmacy demographic factor.

Apply the adjusted pharmacy demographic factor to the clinical-adjusted net pharmacy Step 6.13:
Step 6.14 Clinical/Demo-Adjusted Net Pharmacy PMPM
$=$ Step 6.13 Clinical-Adjusted PMPM $\times$ Adjusted Pharmacy Demographic Factor

### 6.15 Apply the Industry Factor

Extract the industry factor from Table 20 - Industry Load and apply it to the clinical- and demographicadjusted net pharmacy PMPM calculated in Step 6.14:

Step 6.15 Clinical/Demo/Industry-Adjusted Net Pharmacy PMPM
$=$ Step 6.14 Clinical/Demo-Adjusted PMPM $\times$ Industry Factor

### 6.16 Apply the Pharmacy Mandates Adjustment

Extract the mandate factor from Table 66 - Pharmacy: Mandate Factors, if applicable, based on the state being rated. Apply it to the clinical-, demographic-, and industry-adjusted net pharmacy PMPM calculated in Step 6.15:

Step 6.16 Clinical/Demo/Industry/Mandate-Adjusted Net Pharmacy PMPM
$=$ Step 6.15 Clinical/Demo/Industry-Adjusted Net Pharmacy PMPM $\times(1+$ Mandate Adjustment $)$

### 6.17 Apply Utilization Dampening Factor

Extract the utilization dampening factor from Table 67 - Pharmacy: Utilization Dampening Factors based on the average adjusted member cost share calculated in Step 6.12.8. Apply it to the clinical-, demographic-, industry-, and mandate-adjusted net pharmacy PMPM calculated in Step 6.16 to determine the total benefit pharmacy community rate by class (CRC):

Step 6.17 Total Benefit Pharmacy CRC
= Step 6.16 Clinical/Demo/Industry/Mandate-Adjusted Net Pharmacy PMPM
$\times$ Utilization Dampening Factor

### 6.18 Apply Miscellaneous Pharmacy Adjustments

The following multiplicative adjustments are applied to the total benefit pharmacy CRC calculated in Step 6.17 to arrive at the adjusted total benefit pharmacy CRC:

Step 6.18 Adjusted Total Benefit Pharmacy CRC
$=$ Step 6.17 Total Benefit Pharmacy CRC $\times(1+$ Step 6.18.1 Generic Requirement Adjustment $)$
$\times(1+$ Step 6.18.2 Mail Order Deductible Waiver Adjustment $)$
$\times(1+$ Step 6.18.3 Women's Preventive Health Adjustment $)$
$\times(1+$ Step 6.18.34 Mail Order Specialty Drug 30 Day Limit $)$
$\times(1+$ Step 6.18.35 Mandatory Mail Load $)$

### 6.18.1 Generic Requirement Adjustment

Plan designs that do not encourage generic use through a mandatory generic or dispense-as-written program receive a $1 \%$ load. All other plan designs do not receive a load.

### 6.18.2 Mail Order Deductible Waiver Adjustment

Plan designs with a deductible that waive that deductible for mail order prescriptions receive a $5 \%$ load to estimate the increased cost due to the decreased member cost sharing. All other plan designs do not receive a load.

### 6.18.3 Women's Preventive Health Adjustment

Providing coverage of certain drugs and devices without cost sharing to address the Patient Protection and Affordable Care Act Women's Preventive Health Services requirement is reflected as a load.
Combined deductible/OOP plans receive a $2.8 \%$ load, while all other plans receive a $1 \%$ load.

### 6.18.4 Mail Order Specialty Drug 30 Day Limit

Limiting specialty drug fills to 30 day supplies reduces waste. Plans that elect this feature receive a $0.4 \%$ reduction while plans that choose not to elect this feature receive no adjustment.

### 6.18.5 Mandatory Mail for Maintenance Drugs Load

When clients require customers to obtain their maintenance medications via Cigna's mail order pharmacy costs increase do to overhead expense costs associated with filling a script at mail. Plans that have mandatory mail receive a $1 \%$ load. Plans that incentivize mail order utilization receive a $0.5 \%$ load.

### 6.19 Determine Final Pharmacy CRC and Pharmacy CR

Similar to medical, pharmacy rates receive community rate adjustments, but not all of the community rate adjustments from Step 2.8.1 apply to pharmacy. Only the following factors apply:

- Multiple Offering Load

The multiple offering load applied to the pharmacy rate is the sum of the medical factor from Step 2.8.1 and the additional pharmacy load from Table 68 - Pharmacy: Multiple Offering Load, if applicable, based on the site being rated and whether there is more than one product offering being considered.

- Deductible Accumulation Adjustment
- Open Access Load
- Consumerism Adjustment

The product of these adjustments becomes the pharmacy community rate load, which is applied to the adjusted total benefit pharmacy CRC calculated in Step 6.18:

Step 6.19 Final Pharmacy CRC
$=$ Step 6.18 Adjusted Total Benefit Pharmacy CRC $\times$ Pharmacy Community Rate Load
The demographic and industry factors are removed to determine the pharmacy community rate (CR):
Step 6.19 Final Pharmacy CR $=\frac{\text { Step 6.19 Final Pharmacy CRC }}{\text { 6.14 Demographic Factor } \times \text { Step 6.15 Industry Factor }}$

### 6.20 Aggregate Individual Claim Costs

Combine the individual PMPM pharmacy claim costs for the entire census to determine the aggregate pharmacy claim cost PMPM:

Step 6.20 Aggregate Pharmacy CRC $=\frac{$|  Sum of Step 6.19 Final Pharmacy CRC for all  |
| :---: |
|  individuals  |}{Sum of the number of individuals}

Sum of Step 6.19 Final Pharmacy CR for all
Step 6.20 Aggregate Pharmacy CR $=$ individuals
Sum of the number of individuals

## Final Rate

## 7 Calculate Final Rate

Use the following to combine medical and pharmacy rates and calculate the final PMPM rate. If the pharmacy benefit is carved out, it will not be included in the calculation.

$$
\text { Final PMPM Rate }=\frac{[\text { Step } 5 \text { Aggregate Medical Claim Cost }]+[\text { Step 6.20 Aggregate Pharmacy CRC }]}{[\text { Applied Loss Ratio }]}
$$

Using the demographic assumptions from Step 1, determine the number of members per subscriber and calculate the per employee per month (PEPM) rate:

Final PEPM Rate $=[$ Final PMPM Rate $] \times[$ Number of Members per Subscriber $]$

## Appendix A: Experience Rating Formula for Medical Products

Blended claims are a weighted average of the group's official experience and the manually rated claims.
The group's official experience is calculated as fee-for-service paid claims, adjusted for large claims and capitation, then multiplied by a trend factor. The claims are then adjusted for any changes in liability. This experience could include Cigna experience on the particular group or a portion of the group or prior carrier experience.

The manually rated claims are calculated according to the formulas and tables filed and approved with the state.

The weights used to blend the claims are based on the credibility of the group. The blended claims may be adjusted for underwriting discretion. A retention charge is then added for administrative expenses (inclusive of network access fees), taxes, commissions, and profit. The premium is then adjusted for the pooling charge where applicable.

## Appendix B: Cigna Care Network (CCN) Tiered Benefits

A manual rate will be developed for the underlying plan, consistent with this filing's base methodology and reflecting the tier 1 level of cost-sharing for SCP/PCP office visits.

The rate adjustment will equal [1 - Savings \%], according to the following formula (and the formula components are defined below):

Savings \%

$$
\begin{aligned}
& =[1-\text { OON Percent }] \\
& \times[\text { Benefit Save } \times \text { Percent Non-CCN Dollars }+ \text { Benefit Save } \times \text { Percent Non-Tiered Dollars }]
\end{aligned}
$$

Notes:

- If a client decides to administer the tier 1 benefit to non-tiered physicians, raw benefit save is not multiplied by the percentage of members in the non-tiered group.
- PCP and SCP savings are calculated separately and then combined for a total impact to the manual rate.

Definitions:

- Benefit Save - Benefit savings ran through the regular methodology as if the whole group was making the copay or coinsurance change from tier 1 to tier 2 benefits.
- Percent Non-CCN Dollars - Percentage of total physician dollars at a market level that represent categories of doctors where we do define CCN vs. non CCN but the doctors did not earn the designation.
- Percent Non-Tiered Dollars - Percentage of total physician dollars at a market level that represent categories of doctors where we do not designate CCN vs. non CCN.
- OON Percent - Developed for the underlying plan, consistent with this filing's base methodology and reflecting the Tier 1 benefit level. Calculated as OON Utilization in Step 3.1.2.

## Appendix C: General Medical Tables

Table 1 - Medical Base Claims

|  | Major Service Categories (dollars PMPM) |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Inpatient <br> (IP) | Outpatient (OP) | Primary Care Physician (PCP) | Emergency <br> Room (ER) | Specialty Care Physician (SCP) | Other | Preventive Care |
| Experience-Rated In-Network | 109.76 | 113.30 | 21.24 | 31.87 | 46.03 | 14.16 | 16.28 |
| Experience-Rated Out-of-Network | 159.15 | 164.28 | 30.80 | 46.21 | 66.74 | 20.53 | 23.60 |

Table 2 - MSC Weighting by SCC

|  | Major Service Categories |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Sub-Cost Categories | Inpatient (Hospital) | Outpatient (Hospital) | ER | PCP | SCP | Other |
| Facility | 83.5\% | 55.0\% | 100.0\% | 0.0\% | 0.0\% | 100.0\% |
| Professional | 16.5\% | 17.0\% | 0.0\% | 90.0\% | 81.0\% | 0.0\% |
| Lab | 0.0\% | 6.8\% | 0.0\% | 8.0\% | 3.6\% | 0.0\% |
| Radiology | 0.0\% | 10.2\% | 0.0\% | 2.0\% | 5.4\% | 0.0\% |
| Advanced Radiology (ARI) | 0.0\% | 11.0\% | 0.0\% | 0.0\% | 10.0\% | 0.0\% |

Table 3 - Preventive Care Child Age Adjustment

| Elected Child Age | Portion of Preventive Care Base Claim Cost |
| :--- | :--- |
| $\leq 2$ | 0.16 |
| 3 to 64 | Linearly interpolate between 0.16 at 2 and 1.0 at 65 |
| $\geq 65$ | 1.0 |

Table 4 - National Medical Trend

|  | $\mathbf{2 0 1 5 / 2 0 1 4}$ | $\mathbf{2 0 1 6 + / 2 0 1 5}$ |
| :--- | :---: | :---: |
| IN Trend | $8.5 \%$ | $8.5 \%$ |
| OON Trend | $8.5 \%$ | $8.5 \%$ |

Table 5 - National Utilization Rates by MSC

|  | Major Service Categories |  |  |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | IP Per Day | IP Per Admit | OP | ER | PCP | SCP | Other |
| National Utilization | See Note | 0.09 | 0.12 | 0.40 | 1.90 | 2.10 | 0.00 |
| Note: To determine utilization for IP Per Day, consult Table 6 <br> correspond to the 'Max Dand the 'Average Days' which <br> utilization. |  |  |  |  |  |  |  |

Table 6 －Number of Copays Per Admit Adjustment

| Max Days | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

Table 10 - Average Visit Cost

|  | PCP Office Visit | SCP Office Visit | OON Office Visit |
| :--- | :---: | :---: | :---: |
| Average Cost | 110 | 190 | 190 |
| Note: Trend applies to these values |  |  |  |
| If PCP and SCP have a combined limit, weight these values 45\% PCP and 55\% SCP |  |  |  |

Table 11 - Preventive Care Cost-Share Weighting

| Major Service Category | Weighting |
| :--- | :---: |
| PCP | $75 \%$ |
| SCP | $25 \%$ |

Table 12 - Medical Utilization Dampening

|  | IP | OP | PCP Copay | PCP Ded/Coins | ER | SCP Copay | SCP Ded/Coins | Other |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| A | -2.17 | -1.34 | -0.68 | -0.83 | 0.00 | -0.71 | -2.06 | -1.78 |
| B | 0.12 | 0.21 | 0.11 | 0.37 | 0.00 | 0.15 | 0.57 | 0.30 |
| Applicable MSC | IP | OP | PCP | PCP | ER | SCP | SCP | Other |
|  |  |  |  |  |  |  |  |  |
| C | This factor is equal to [(Total Cost-Share) $\times(-0.16)+(0.011)$ ] and is the same for all MSCs |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |
|  | Indemnity (NY metro) |  |  | Indemnity (NJ) |  | Indemnity (all other areas) |  |  |
| A <br> B <br> Applicable MSC | $\begin{array}{r} -0.10 \\ 0.27 \end{array}$ |  |  | $-0.10$ |  | -0.32 |  |  |
|  |  |  |  | $0.36$ |  | 0.22 |  |  |
|  | These indemnity UD factors apply to the aggregate cost-share |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |
| Note: Utilization dampening has a floor of 0.20 . There is a cap of 1.12 on PCP, 1.17 on SCP, and 1.25 on Other. |  |  |  |  |  |  |  |  |

Table 17 - Community Rate Loads

## ER/UC Steerage Adjustment

Using the applicable copay and/or coinsurance per the plan design and the average steerable visit cost below, calculate the average actual visit cost to a member for an ER visit and Urgent Care facility visit. Look up the load on the table based on visit cost differential and the Effective ER deductible from Step 2.4. No load is applied if Urgent Care is subject to the deductible or if the calculated Urgent Care facility visit cost is $\$ 0$.

| Average Steerable visit cost |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| ER | 1000 |  |  |  |  |
| Urgent Care | 160 |  |  |  |  |
|  | Effective ER Deductible |  |  |  |  |
| Visit Cost Difference | 0 | 500 | 1000 |  | 3000 | 6000 |
| 0 | 1.0000 | 0.9995 | 0.9990 | 0.9975 | 0.9970 |
| 100 | 0.9995 | 0.9989 | 0.9984 | 0.9974 | 0.9970 |
| 200 | 0.9990 | 0.9984 | 0.9979 | 0.9973 | 0.9970 |
| 300 | 0.9985 | 0.9980 | 0.9975 | 0.9972 | 0.9970 |
| 400 | 0.9980 | 0.9976 | 0.9972 | 0.9971 | 0.9970 |
| 500 | 0.9975 | 0.9973 | 0.9970 | 0.9970 | 0.9970 |

## Medical Specialty Drugs Steerage Adjustment

The following adjustments apply for plan designs where the deductible applies to medical specialty drugs administered in outpatient facilities, the deductible does not apply to medical specialty drugs administered in either (or both of) the home or at a physician's office, and the member coinsurance for those services is greater than $0 \%$.

|  | Deductible Waiver by Place of Administration |  |  |
| :---: | :---: | :---: | :---: |
|  | Physician's <br> office | Home | Both Home and <br> Physician's Office |
| 0 | 1.0000 | 1.0000 | 1.0000 |
| 1000 | 0.9997 | 0.9999 | 0.9996 |
| 2000 | 0.9994 | 0.9998 | 0.9992 |
| 3000 | 0.9991 | 0.9997 | 0.9988 |
| 4000 | 0.9988 | 0.9996 | 0.9984 |
| 5000 | 0.9985 | 0.9995 | 0.9980 |

## Independent Lab Steerage Adjustment

The following adjustments apply for plan designs where the deductible does not apply to independent lab facility services, the deductible does apply to either (or both of) physician's office lab services or outpatient facility lab services, and the member coinsurance for those services is greater than $0 \%$.

|  | Deductible by Place of Service |  |  |
| :---: | :---: | :---: | :---: |
| Deductible | Outpatient <br> Facility | Physician's <br> Office | Both OP Facility and <br> Physician's Office |
| 0 | 1.0000 | 1.0000 | 1.0000 |
| 1000 | 0.9998 | 0.9998 | 0.9996 |
| 2000 | 0.9996 | 0.9996 | 0.9992 |
| 3000 | 0.9994 | 0.9994 | 0.9988 |
| 4000 | 0.9992 | 0.9992 | 0.9984 |
| 5000 | 0.9990 | 0.9990 | 0.9980 |

Enhanced Non-Par Claims Adjustment
See Table 33 - Enhanced Non-Par. Claims Adjustment and Table 34 Enhanced Non-Par. Claims Adjustment Summary for appropriate loads.

| Infertility Treatment - Buy Up \#1 OON | IN PMPM multiplied by the POS Load |
| Infertility Treatment - Buy Up \#2 | Base Cost PMPM $=5.2897 \times\left[\frac{\text { Max }}{18844.37}\right]^{0.6}$ 10.5794 cap on coverage |
| Infertility Treatment - Buy Up \#2 OON | IN PMPM multiplied by the POS Load |
| Infertility Only | Difference between the cost of Infertility Treatment Buy Up \#2 and Buy Up \#1 |
| Infertility Only OON | IN PMPM multiplied by the POS Load |
| Complex Psych Program Savings | -0.1798 base PMPM |
| TMJ | 0.3716 base PMPM |

| Rider | Methodology |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| Narcotics Therapy Program Savings | -0.1798 base PMPM |  |  |  |
| Alternative Care (Acupuncture, Naturopathy, Massage) | Naturopathy and Acupuncture are available with or without massage at $\$ 300$ or $\$ 600$ limits. <br> 1.5643 - Without massage, $\$ 300$ limit. <br> 2.2835 - Without massage, $\$ 600$ limit <br> 1.8041 - With massage, $\$ 300$ limit <br> 3.3624 - With massage, $\$ 600$ limit |  |  |  |
| Acupuncture | This doesn't apply if an Alternative Care election is made. 0 - Less than 10 visits <br> $0.4695-10$ to 11 visits <br> $0.5634-12$ to 14 visits <br> $0.6690-15$ to 19 visits <br> 0.8451 - For 20 or more visits. |  |  |  |
| Preventive Care OON Exclusion | If OON preventive care is not covered: -0.7500 base PMPM |  |  |  |
| Family Planning Preventive Care Exemption | Apply a factor of 0.96 to the preventive care base rate in Step 2.1. |  |  |  |
| The following therapies riders use curves based on the number of visits. One slope (PMPM per visit) applies up to some number of visits ("Breakpoint") while another slope applies past that number of visits. <br> For example, if Speech Therapy is offered with a 30 day limit (with a limit past the breakpoint), then the final cost would be: $\text { ST PMPM }=[1 \text { st Slope }] \times 20+[2 \text { nd Slope }] \times 10=0.00545 \times 20+0.00136 \times 10=0.123$ <br> If Cardiac and Pulmonary Rehab is included with these benefits, it does not have a pricing impact. |  |  |  |  |
| Therapy | $1^{\text {st }}$ slope | Breakpoint | $2^{\text {nd }}$ slope | Cap |
| Speech Therapy (ST) | 0.00545 | 20 days | 0.00136 | 0.20432 |
| Outpatient Speech, Hearing, and Occupational Therapy (OSHOT) | 0.01090 | 20 days | 0.00272 | 0.40865 |
| Chiropractic Therapy (Chiro) | 0.05449 | 60 days | 0.01453 | 3.70508 |
| Physical Therapy (PT) | 0.10150 | 20 days | 0.02383 | 3.45963 |
| PT and Occupational Therapy (OT) | 0.10695 | 20 days | 0.02519 | 3.63262 |
| PT and OSHOT | 0.11240 | 20 days | 0.02655 | 3.86828 |
| PT, OT, ST, and Chiro | 0.13827 | 30 days | 0.05709 | 7.57336 |
| The following riders are not standardly offered but are frequently requested. If elected, they are multiplicative adjustments applied to total expected medical and pharmacy claims as calculated in Step 5 and Step 6.20. If the coverage is mandated, then the adjustment is already embedded in the rating area factor and does not apply separately. |  |  |  |  |
| Short Term Rehab Coverage for Auti |  |  | 1.001 |  |
| Short Term Rehab Coverage for Dev | tal Delays |  | 1.001 |  |

## EXHIBIT I

## ACTUARIAL MEMORANDUM AND CERTIFICATION

## Scope and Purpose

The purpose of this filing is to submit CIGNA Health and Life Insurance Company’s group manual rating methodology. Our pricing model was developed to provide a consistent rating methodology across products. This filing includes Open Access Plus, PPO, Network, Indemnity, and retiree medical insurance product, and is applicable for groups of 100 or more lives. Methodology is also included for Pharmacy products.

## Benefit Description

The benefits covered in this memorandum include group health insurance coverage as described in CIGNA Health and Life Insurance Company forms HP-POL et al, and HC-TOC et al.

## Census

Member level census will be used when available. If only subscriber level data is available, penetration and translation assumptions will be used to create a member level census for manual rate development. The penetration and translation assumptions used are developed from studies of our book of business, which includes experience from similar CIGNA Health and Life Insurance Company ("CHLIC") policies. Penetration estimates the number of subscribers that will select the CIGNA Health and Life Insurance Company plan; the translation process develops projected subscribers and members within rating tiers.

## Adjustments to Base Claims

The base claim rates by area are adjusted for certain group and member characteristics. These include industry loads and discounts, age and sex demographic adjustments, and trends.

Adjustments for industry (SIC) are developed from a study of our book of business combined with results from an outside consultant's national industry factor assessment study.

Age and sex demographic adjustments are developed from a study of our book of business. The resulting age/sex slopes are normalized to represent the national census.

Trends reflect historical experience from CHLIC's group medical experience and projections for future levels. Medical trend rates are applied on a daily basis.

## Benefit Plan Adjustments

Base claims are reduced for specific cost sharing features of the product and benefit plan selected. Copay and other cost sharing benefit design related adjustments are made using assumptions regarding utilization levels by base claim component. Claim distributions are used to determine the impact of deductibles, coinsurance and out of pocket maximums. In addition, a utilization dampening factor is applied to reflect lower utilization levels as cost sharing rises.

## Renewability Clause

The benefit plans covered under this memorandum are guaranteed renewable.
Applicability
CHLIC, Inc. anticipates both renewals and new issues from the forms currently filed.

## Marketing Method

These products are sold to employer-employee groups, labor union groups and association groups through CIGNA Health and Life Insurance Company group sales offices.

## Premium Classes

Premium rates may vary by product, plan design, geographic area, group demographics, industry, effective date, experience, and underwriting discretion.

## Issue Age Range

There are no issue age restrictions in our policy forms; however, eligibility requirements must be fulfilled.

## Premium Modalization Rules

The CIGNA Health and Life Insurance Company Health Manual produces monthly premiums. Modalization factors are expressed as a function of these monthly rates as follows:

| Annual | 11.8227 |
| :--- | :---: |
| Semi-Annual | 5.9557 |
| Quarterly | 2.9852 |

## Distribution of Business

Rates vary by geographic location and group specific characteristics, including demographics. Target distribution is to groups with both single employees and employees with dependents, assuming a 40/60 distribution

## Rating

The group rates filed represent the rate level we expect to be necessary to achieve a desired average loss ratio for all group contracts. Accordingly, actual rates for groups will vary as a result of a variety of factors. These include variation in benefit plan, age, gender, family composition, size, industry, area, healthplan claim experience, and underwriting discretion.

Depending upon group size, case specific claim experience may be used to adjust the rate. Credibility is based on group size, pooling level and months of experience. Rates for partially credible groups are based on a blend of experience and manual rating.

For Minimum Premium plans, the premium paid by the policyholder is reduced for the portion of the total claim amount that is expected to be self-insured.

## Anticipated Loss Ratio

The methodology and supporting factors apply to groups of 51 or more employees.

The anticipated large group loss ratio for this policy is $84.6 \%$.
The components of Cigna's retention for our Large Group pricing are as follows:
Administrative Expenses 6.0\%
Optional Buy-ups 0.6\%
PPACA Fees 3.5\%
Risk Charge: 0.4\%
Premium and Income Taxes 2.0\%
Profit 1.0\%
State Assessments 1.5\%
Commissions 0.4\%
Total 15.4\%

## Comparison to Status Quo

This filing includes a number of changes to our medical and pharmacy rating methodologies. It is difficult to quantify each change independent of the others. The average expected decrease in manual rates in Vermont is $-3.9 \%$. This figure was calculated by comparing the current filed and approved manuals using an illustrative effective date of $1 / 1 / 2016$ to the proposed $1 / 1 / 2016$ manuals for a representative sample of Vermont sitused business (1.1\% decrease) coupled with a $2.5 \%$ reduction to our originally proposed profit
assumptions ( $3.5 \%$ to $1.0 \%$ ). Note: The number of fully insured accounts sitused in Vermont in 2014 was 15 consistent with the company's Supplemental Health Care Exhibits.

## Changes to Methodology for the 2016 Cigna Rate Filing

- Updates to the base medical claim assumptions and the claims probability distribution
- Updates to our medical area factors and trend
- Separation of "Lab" and "Radiology" into distinct sub-cost categories. Updates to major service category weightings by sub-cost category
- For plans with combined medical and pharmacy claims: update to pharmacy deductible applicability methodology
- Updates to the collective deductible and collective out-of-pocket maximum methodologies
- Addition of the demographic aging adjustment to the demographic factor
- Addition of a cap on utilization dampening for some major service categories
- Community rate loads - addition of the following:
- More multiple offering load values
- More office surgery adjustment options
- Lock-in decrement
- Case-size adjustment
- Criteria-Based Network Adjustment
- ER/UC steerage adjustment
- Medical specialty drugs steerage adjustment
- Independent lab steerage adjustment
- Enhanced non-par claims adjustment
- Riders
- Updates to base rates for all riders
- Updates to and simplification of the Vision rider methodology, including removal of the platform dependency
- Addition of "Health Advisor" and "Personal Health Team" health management programs
- Updates to the out-of-network preventive care rider methodology
- Addition of standardized pricing for the following benefits not standardly offered:
- Short term rehab coverage for autism and developmental delays
- Applied Behavioral Analysis therapy for autism
- Hearing aids
- Gender reassignment
- Artificial insemination
- Skilled nursing
- Updates to rates for Mental Health/Substance Use Disorder products (referred to in prior filings as "Mental Health/Substance Abuse")
- Updates to the pharmacy area factors, pharmacy trend and base claim assumptions. The updates reflect the growing cost of specialty drugs, planned revisions to our drug lists, and market-specific experience. The impact of these changes will vary based on plan characteristics.

## Credibility Formula Revision

Cigna Health and Life Insurance Company uses experience rating on large employer commercial customers to set future rates based on the past experience of the customer, where a customer is defined as the aggregation of all Cigna Health and Life Insurance Company accounts associated with a given employer, nationwide.

For prospectively rated accounts, the number of member months at which the experience is considered fully credible depends on the pooling point, shown in the chart below. Partial credibility (blending experience with manual) would be reflected using the following formula:

$$
\text { Credibility }=\sqrt{\frac{\text { Member Months }}{\text { Upper Bound }}}
$$

Where the upper bound varies based on pooling point as follows:

| Pooling Point Range | Upper Bound |
| :---: | :---: |
| $\$ 0-\$ 29,999$ | 5552 |
| $\$ 30,000-\$ 59,999$ | 7000 |
| $\$ 60,000-\$ 89,999$ | 9000 |
| $\$ 90,000-\$ 139,999$ | 11000 |
| $\$ 140,000+$ | 12000 |

There is a minimum of 5 months of experience for paid claims and 4 months for incurred claims as well as a minimum overall of 100 member months to have any credibility. If member months are greater than or equal to the upper bound, credibility is $100 \%$.

## ACTUARIAL CERTIFICATION

## Opinion

In my opinion, the rates were developed using reasonable actuarial assumptions, and the rate levels are reasonable in relationship to the benefits provided. The actuarial data and experience will be maintained by the company and available for review by the Green Mountain Care Board upon request.

I certify that to the best of my knowledge and judgment, this rate filing is in compliance with the applicable laws and regulations of the State. In summary, I believe that the rating assumptions proposed will produce rates which are not excessive, inadequate, or unfairly discriminatory

Matthew D. Danziger, FSA, MAAA
Date: 3/30/2016
Actuarial Director

## Responses to Objections

Objection 5 ..... 3
Objection 6 ..... 3
Objection 7 ..... 4
Objection 8 ..... 5
Objection 9 ..... 5
Objection 10 ..... 5
Objection 11 ..... 6
Objection 12 ..... 6
Objection 13 ..... 7
Objection 14 ..... 8

## Objection 1

## Comment:

Please list and quantify the reasons for the overall rate impact of $-1.10 \%$, and explain why policyholders could receive a rate increase/decrease that ranges from $-3.90 \%$ to $1.10 \%$.

## Response:

The overall rate impact of $-1.10 \%$ represents the weighted average of our latest and greatest actuarial pricing methodology for our customers and clients in the State of VT. This impact is calculated by comparing the filed and approved manual rates for an illustrative effective date of $1 / 1 / 2016$ to the proposed manual rates for an illustrative effective date of $1 / 1 / 2016$ for a representative sample of VT sitused business.

By design of the rate review process, methodology changes are neutralized out at the rating area level, such that the average impact of methodology changes are $0 \%$ (i.e. the average manual is aligned to the average experience). That said, the impact of methodology changes (e.g. a change in the CPD) can cause volatility from average at the case level, thus displaying a rate impact range of $-3.90 \%$ to $1.10 \%$. Additionally, given that this analysis represents the impact to a representative sample of accounts, cases that are VT sitused but have membership inside and outside of VT, geographic mix can drive variance to the average.

## Objection 2

## Comment:

The actuarial memorandum indicates that one of the changes to methodology includes "updates to the based medical claim assumptions and the claims probability distribution".
a. Please explain in more detail about the updates, including but not limited to experience period and data source.
b. Quantify the impact of updating base medical claim assumptions and the CPD table respectively and their combined effects.

## Response:

The updates to base medical claim assumptions, in this year's filing are a mechanical result of rolling forward the base year from 2013 to 2014. The current filed an approved "manual base rates" are based in 2013. The proposed "manual base rates" are based in 2014. Each year, we rollforward the national base medical claims by national trend, and consequently roll off that year of trend from the calculation, i.e. 2014/2013 trend is no longer used in rate calculations. As such, there is no financial impact of this change. As for the CPD, minor changes were made to the shaping of our CPD based on book of business claims experience. The average impact of these changes is $0 \%$ as noted in our response to objection \#1. Our rate review process is further used to calibrate the combination of our base rate, methodology, and area factors to our claims experience at the rating area level. The combination of all pricing methodology changes (including area factors and base rates, and retention) result in an overall rate change of $-1.10 \%$, as stated in the SERFF.

## Objection 3

Comments:
Regarding the medical trend assumptions,
a. Table 29 of the filing shows a minimum and maximum of medical trend for Vermont while Table 28 shows that only the maximum trend is used in all three areas. Please clarify what trend assumptions are being used in the pricing model.
b. If the trend assumptions used in the model are different from those shown in the confidential Supplemental Exhibits, please provide support for the trend assumptions in a similar format as the confidential Supplemental Exhibits.
c. Explain the change in the professional unit trend from 2015 to 2016 that is shown in the confidential Supplemental Exhibits.

## Response:

Please see response in "Objection Letter 1 Confidential Responses".

## Objection 4

## Comments:

We have observed a significant change in the normalization factor from the 14/13 trend period to 3Q YTD 15/14 trend period, as shown in the confidential Supplemental Exhibits. What are the driving factors for such change, and what indicated the need for new normalization factors?

## Response:

As noted in the prior year's objection \#4, question \#1 follow-up response, the 2014/2013 observed trend normalization factor was $-16.7 \%$. Of this factor, $-14.4 \%$ was related to the State of VT account (which we lost on $1 / 1 / 2014$ ) and $-2.3 \%$ of this factor is related to all other accounts within the book of business.

The largest driver of the normalization factor was demographics, which accounted for $-12.1 \%$ of the total, indicating that the average age of the VT population in 2014 was younger than in 2013. When we re-calculated the demographic factor excluding the State of VT account, the change in demographic factors was $-0.4 \%$. It can be assumed that $-11.7 \%$ of the aggregate demographic factor change was driven by State of VT. This account represented approximately 33\% of Cigna's 2013 book of business.

The 2014/2015 observed trend normalization factor of $-0.6 \%$ represents the changes in benefits, demographics and geographies, but unlike prior year, there were no large accounts lost or sold that could have caused a significant normalization factor.

## Objection 5

## Comments:

Regarding the driving factors of pharmacy trends indicated in the confidential Supplemental Exhibits, please provide more detail about the impacts to total pharmacy trends from 2014 to 2015 and 2015 to 2016. Additionally, provide quantitative support for the pharmacy trends, such as historical experience or any other details outlining how the trends were developed.

Response:
Please see response in "Objection Letter 1 Confidential Responses".

## Objection 6

Comments:

What is the basis for the updates to your medical area factors? Provide in more detail about the process of updating the medical area factors and the experience that supports the updates.

## Response:

As noted in prior year's objection letter \#4, response \#8, our area factors are developed using the claims experience within a specific rating area For VT300A, medical area factors are developed based on the claims experience of the residents who live in the state of VT for our OAP product. For the most recent rate review, we used the FY2014 claims experience. Using that book of business, we can calculate the manual rates by running the benefits that these members have through our proposed pricing methodology and pricing factors. We then compare the actual claims experience to the manual rates to see whether they are in-line with each other. We review many cuts of data, including various funding arrangements, member account levels, exclusion of outliers, etc. to ensure we are using a credible book of business when analyzing these cuts of data and then determine an action (moving the manual rates closer to the experience either up or down). Note: Given the late timing of last year's filing process, we previously provided the results of the rate review which helped set the current filed and approved area factor.

To calculate the proposed area factor, as outlined in Objection 1, we simply took the filed and approved area factor (based in 2013) and trended it forward one year. Because the base medical manual claims were also trended forward, we normalized the impact of that change. Mechanically, the impact to the VT area factor becomes the difference between 2014 VT filed and approved trend and 2014 filed and approved national trend applied to the filed and approved area factor. Note there were no changes to these assumptions since last filing. 2014 National trend $=8.5 \%$. The 2014 filed and approved trend for VT is $10.1 \%$.

Proposed Area Factor = Filed and approved area factor x (1+VT specific trend) / (1+ national trend)
$0.83 \times(1.101) /(1.085))=0.85$

## Objection 7

## Comments:

The actuarial memorandum has listed the addition of a few community rate loads. Please explain the reason for adding each of these factors and their pricing impact.

## Response:

The actuarial memorandum lists the addition of the following community rate loads:

1) More multiple offering load
2) More office surgery adjustment options
3) Lock-in decrement
4) Case-size adjustment
5) Criteria-Based Network Adjustment
6) ER/UC steerage adjustment
7) Medical specialty drugs steerage adjustment
8) Independent lab steerage adjustment
9) Enhanced Non-Par Claims Adjustment

Numbers 2, 6, 7, 8, 9 pertain to new product features or existing features that we have never sold before. These additions provide additional benefit flexibility, allowing clients to elect
richer/leaner benefit options. The pricing relativity has been highlighted in Table 17 within the rate manual.

Numbers 1, 3, 4 and 5 are enhancements to our methodology. As previously explained, by design of the rate review process, methodology changes are neutralized out at the rating area level, such that the average impact of methodology changes are $0 \%$ (i.e. the average manual is aligned to the average experience). These adjustments are mostly applicable to non-VT resident states and there are no significant impacts to VT rating.

## Objection 8

## Comments:

Regarding the 0.0075 demographic aging factor,
a. Explain why it is necessary to make demographic aging adjustments
b. Provide more detailed quantitative and qualitative support for its derivation
c. Provide an example based on a real live case from previous year to illustrate the demographic aging adjustment
d. What is the impact of implementing the demographic aging factor on the manual rates?

## Response:

Our methodology includes a demo factor that takes into account the effect of the case population as of a point in time. Neither this factor, nor our trend, takes into account the effect of aging within the census over the case period. The demographic aging factor reflects the aging of the census from the time the census is evaluated to the policy effective period.

Our study found that on average, claim costs should be increasing by a trend of $1 \%$ annually due to demographic aging. However, the data used in the study likely overstates the effect due to the economic recession, and we have estimated that the long-term trend for demographic aging is closer to $0.75 \%$ annually, based on 1999-2009 insured lives data from the US Census Bureau.

The adjustment impact is approximately $0.75 \%$. The formula below illustrates the effect of aging within a census:
$0.75 \%$ x \# of years between the census evaluation and the midpoint of the case effective period

## Objection 9

## Comments:

How was the cap on utilization dampening determined for PCP, SCP and others, respectively, and explain the reasons for adding the cap.

## Response:

We added a cap on utilization dampening because there was already a floor in place and we decided there should be a correlating ceiling to account for rich plan designs. There is a limit to reasonable utilization based on lower cost share and that limit was set per our actuarial judgment.

## Objection 10

Comments:

We have observed a 9.5\% increase in the minimum and maximum Mental Health/Substance Use Disorders OAP/PPO Rates from last filing. Please provide more detailed support for such increase, including the experience used for the derivation of the new rates.

## Response:

Below is a summary of 2014 and 2015 claims experience for Cigna's OAP/PPO MHSA product to support the change in base rates of $9.5 \%$ shown below. One of the indicators of the overall rate increase, in addition to regional influences, is the year over year change in PMPMs related to benefit neutral renewals, which is an $8.8 \%$ change.

| Proclaim Cap. Rate |  |  |  |
| :---: | :---: | :---: | :---: |
| Filing | State | Minimum | Maximum |
| $\mathbf{2 0 1 5}$ | VT | $\$ 10.37$ | $\$ 18.44$ |
| $\mathbf{2 0 1 6}$ | VT | $\$ 11.35$ | $\$ 20.19$ |
| YoY Change | VT | $9.5 \%$ | $9.5 \%$ |

|  | $\underline{2014}$ |  |  | $\underline{2015}$ |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Claims | MMOS | PMPM | Claims | MMOS | PMPM | \% Change |  |
| Benefit Neutral | $\$ 589,861$ | 40,216 | $\$ 14.67$ | $\$ 624,662$ | 39,148 | $\$ 15.96$ | $8.8 \%$ |

## Objection 11

## Comments:

Please elaborate the pharmacy area factor by base rating area and product type.

## Response:

The table below outlines pharmacy area factors by base rating area and product type.

| Area Description | Rating Area | Product | Proclaim <br> Area Factor | Facets Area <br> Factor |
| :---: | :---: | :---: | :---: | :---: |
| VT, VERMONT | VTNWK1 | NWK | 0.84 | 0.79 |
| VT, VERMONT | VTOAP1 | OAP | 0.84 | 0.79 |
| VT, VERMONT | VTPPOA | PPO | 0.84 | 0.79 |

The area factor variation between our Proclaim platform and Facets platform reflects differences in observed claim experience. The Facets platform is typically used for cases with less than 250 eligible employees. The Proclaim platform is typically used for the cases with greater than 250 eligible employees. Some of this variation is the result of subtle product differences that occur between the two different claims platforms that the products are adjudicated on.

## Objection 12

## Comments:

We have noticed a few new formulary types listed in your filing (e.g. legacy, DRT). What is the reason for the new formulary types, and how are they mapped to your current formulary types?

## Response:

We do not have any new formularies this year. We have updated the names of the formularies in the rate filing to match the names we use to market the formularies to our customers. We apologize for any confusion caused by this update. A mapping from the 'old' naming convention to the 'new' naming convention is listed below.

| Proclaim Formularies |  | Facets Formularies |  |
| :--- | :--- | :--- | :--- |
| Old Formulary Name | New Formulary Name | Old Formulary Name | New Formulary Name |
| Standard Open | Legacy | Performance Open | Legacy |
| Standard Closed | Standard | Performance Closed | Performance |
| Value Open | Value | Advantage Open | Advantage |
| Value Closed | Value DRT | Advantage Closed | Advantage DRT |
|  |  | Generics Only Open | Generics Only |

## Objection 13

## Comments:

Provide the derivation of the projected federal MLR for 2016, starting with your target loss ratio.

## Response:

| Projected MLR | $\mathbf{8 2 . 2 \%}$ |
| :--- | :---: |
| + Risk Charges | $0.4 \%$ |
| - TPV Admin | $-1.6 \%$ |
| + QI Expenses | $0.1 \%$ |
| + PPACA Fees | $2.0 \%$ |
| + Premium Tax | $1.8 \%$ |
| + Fed Income Tax | $1.5 \%$ |
| Federal MLR | $\mathbf{8 6 . 4 \%}$ |

The following assumptions apply to the projected federal MLR for 2016:

- Risk charges are a component of policy holder product design within the shared returns product. If a clients' claims experience runs at or better than set expectations inclusive of the risk charge, the client shares in the favorable experience up to $100 \%$.
- Third Party Vendor administrative expenses are a deduction from the claims in the federal MLR. Assumption of $1.6 \%$ of premium based on final 2014 results.
- QI expenses assumed to be $0.14 \%$ of premium, based on final 2014 results.
- PPACA fee assumptions:
- Reinsurance PMPM of $\$ 2.25$ or $0.50 \%$ of premium, based on a $\$ 454$ PMPM premium (grounded in VT historical results)
- HII Fee set to $1.9 \%$ of premium ( $3 \%$ pricing assumption * 0.65 tax adjustment). Note that this fee is not required for cases with a $1 / 1 / 17$ effective date
- Premium tax of $2.1 \%$ based on VT historical results
- Federal income tax is based on a $35 \%$ tax rate adjusted for non-tax deductibility of HII fee.

## Objection 14

## Comments:

Please explain any significant changes in the retention assumptions, and explain how the retention assumptions in this filing compare to experience.

## Response:

| Retention Assumptions | Prior | Proposed | Change |  |
| :--- | :---: | :---: | :---: | :---: |
| Administrative Expenses | $7.0 \%$ | $6.0 \%$ | $-1.0 \%$ | A |
| Optional Buy-ups | $0.0 \%$ | $0.6 \%$ | $0.6 \%$ | B |
| PPACA Fees | $3.8 \%$ | $3.5 \%$ | $-0.3 \%$ | C |
| Risk Charge | $1.0 \%$ | $0.4 \%$ | $-0.6 \%$ | D |
| Premium and Income Taxes | $2.0 \%$ | $2.0 \%$ | $0.0 \%$ |  |
| State Assessments | $0.9 \%$ | $1.5 \%$ | $0.6 \%$ | E |
| Commissions | $1.2 \%$ | $0.4 \%$ | $-0.8 \%$ | F |
| Profit | $1.0 \%$ | $3.5 \%$ | $2.5 \%$ | G |
| Total Retention | $\mathbf{1 6 . 9 \%}$ | $\mathbf{1 7 . 8 \%}$ | $\mathbf{1 . 0 \%}$ |  |
| MLR | $83.1 \%$ | $82.2 \%$ |  |  |

A - Administrative expenses decreased by $1.0 \%$ due to a decrease in administrative fees for GC ( $0.4 \%$ ) and state assessments ( $0.6 \%$ ). See below for more detail on state assessments.

B - This is the first year that optional buy-ups are included in our filing. This line item is intended to represent the average expense attributed to additional programs electively purchased by certain clients in the VT book of business. An example of these programs includes our Healthy Pregnancy program.

C - PPACA fees decreased by $0.3 \%$ due to a decrease in the reinsurance fee from $\$ 44$ PMPY to \$27 PMPY.

D - Risk charges decreased by $0.6 \%$ due to a shift in membership towards our guaranteed cost product.

E - In the State of VT, VT HC Claims Tax makes up 0.9\% and VT Immunization Vaccine Purchasing Program makes up $0.6 \%$. In the prior year, we bucketed the $0.6 \%$ related to the vaccine purchasing program in administrative expenses. Effectively, there is no change here.

F - The decrease of $-0.8 \%$ is due to a shift in membership between fully insured products.
G - Per the requirement of the GMCB, the profit assumption in our filed and approved rating methodology is $1.0 \%$. In this proposed filing, we are submitting assumptions for retention which includes a profit assumption of $3.5 \%$. Please see reference to Cigna's position regarding this assumption in the below link:
http://ratereview.vermont.gov/sites/dfr/files/GMCB 006 15rr_Cigna SupplementalMemo.pdf.
CHLIC did not pay a rebate in 2013 or 2014 and does not anticipate paying a rebate in 2015 or 2016.

## Responses to Objections

Contents
Objection 1 ..... 2

Objection 4 ..... 2
Objection 5 ..... 3
Objection 6 ..... 3
Objection 7 ..... 3
Objection 8 ..... 4
Objection 9 ..... 4

## Objection 1

## Comment:

Please explain in more details the "representative sample of VT sitused business" referenced in response \#1. What are the criteria of selecting the sample? How representative was the sample of the total insured lives in the state of VT?

## Response:

The representative sample of VT sitused business includes insured cases plus self-insured cases within our book of business. Our representative sample includes 15 fully insured cases (this agrees to cases represented in the SERFF) and 66 self-insured cases. We include self-insured cases in our analysis because it provides more credibility (the member months for fully insured cases are 33,266 and the member months for self-insured cases are 432,706).

## Objection 2

## Comment:

As stated in response \#2, "minor changes were made to the shaping of our CPD based on book of business claims experience". Please provide a comparison of the shaping of the CPD before and after the changes and explain in more details why these changes are necessary.

## Response:

The changes to the CPD table included in our current submission include updated claims experience and breaking out inpatient facility and professional, both of which allow for more benefit flexibility and overall more accurate pricing.

See excel document for the current and prior CPD charts.

## Objection 3

## Comments:

Response \# 2 indicates that "the combination of all pricing methodology changes (including area factors and base rates, and retention) result in an overall rate change of $-1.10 \%$ ". Please provide a breakdown of the $-1.10 \%$ that corresponds to the effects of the above referenced factors respectively.

## Response:

Our overall rate impact of $-1.1 \%$ is comprised of a $-2.2 \%$ change in manual rates and a $+1.1 \%$ change in retention. The biggest driver of the $-2.2 \%$ change is changes in our prospective trend assumptions. As highlighted in our filing exhibits, we are decreasing our 2015/2014 medical trend assumption from $10.0 \%$ to $9.7 \%$ and our 2016/2015 medical trend assumption from 10.0\% to $8.9 \%$. These changes result in approximately $-1.5 \%$ of impact for VT residents.

The underlying detail of the change in retention is documented in Objection Letter 1, Response \#14.

## Objection 4

## Comments:

We noted that the number of covered lives and member months decreased significantly from the last filing. Please explain how this decrease was being considered in the 2014/2015 trend normalization factor.

## Response:

Our prior filing displayed the 2013 Supplemental Healthcare Exhibit (SHCE) data and our current filing displays the 2014 SHCE data. The largest driver of the change in covered lives and member months between the two years is the State of VT account. This account was included in our counts in 2013, but we lost this case on $1 / 1 / 2014$, so it was not included in our counts in 2014.

We do not anticipate as significant a change in covered lives or member months from the 2014 SHCE to the 2015 SHCE.

## Objection 5

## Comments:

Provide the definition of "lock-in decrement". Under what circumstances would the 0.99 factor be applied?

## Response:

The lock-in decrement represents a pricing adjustment applied to plans without out-of-network benefits.

## Objection 6

## Comments:

Provide the definition of "criteria-based network adjustment". Under what circumstances would this factor be applied? Also, why would the adjustment vary from 0.8505 to 0.9999 ?

## Response:

Criteria-based network adjustments reflect improved provider reimbursement rates when certain criteria are met (e.g. census location). Currently there are no criteria-based network adjustments in VT and therefore, this adjustment is not applicable to VT residents.

## Objection 7

## Comments:

Provide an example based on a real live case from previous year to illustrate how the demographic aging adjustment is applied.

## Response:

Below is an example to illustrate the demographic aging adjustment:
$=1+((($ Midpoint of Projection Period - Census Date $) / 30) / 12) \times$ DemographicAgingFactor $)$
If the census represents ages as of $7 / 1 / 2015$ and the effective date is $1 / 1 / 2016$, then the midpoint date is $7 / 1 / 2016$.

$$
=1+((((7 / 1 / 2016-7 / 1 / 2015) / 30) / 12) \times 0.75 \%)
$$

$=1.0076$
We calculate an aggregate demo factor using the census and a table of demo factors by age group and gender. The demographic aging adjustment then gets applied to the aggregate demo factor.

Aggregate demo factor x demographic aging adjustment $=$ Applied demo factor
See excel document for more detail.

## Objection 8

## Comments:

Why is there a variation in the pharmacy area factor between proclaim platform and facets platform? We did not note any variation in the pharmacy area factors in the last filing.

## Response:

The area factor variation between our Proclaim platform and Facets platform reflects differences in observed claim experience. The Facets platform is typically used for cases with less than 250 eligible employees. The Proclaim platform is typically used for the cases with greater than 250 eligible employees. Some of this variation is the result of subtle product differences that occur between the two different claims platforms that the products are adjudicated on. This variation is a refinement in our current filed methodology.

## Objection 9

## Comments:

In response \#13, premium tax is stated as $1.8 \%$ in the calculation but $2.1 \%$ in the assumption write-up. Which one is correct? Would this inconsistency affect any other calculation?

## Response:

The premium tax of $2.1 \%$ in the assumptions write-up represents a percentage of premium, whereas the $1.8 \%$ in the calculation represents the impact of the premium tax on the MLR calculation. In calculating the impact we are removing the $2.1 \%$ from premium (the denominator), which lessens the impact to the MLR.

|  | Calculation |  |  |
| :--- | ---: | ---: | ---: |
|  | Claim | Prem | MLR |
| Premium Tax Adj | 82.20 | 100 | $82.2 \%$ |
| Change | 82.20 | 97.9 | $84.0 \%$ |
|  | - | -2.1 | $1.8 \%$ |

Current and prior CPD charts.

| 2015 CPD (Current Submission) |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## Application of demographic aging adjustment.

1) A case has the following dates:

| Census Date | $7 / 1 / 2015$ |
| :--- | :--- |
| Effective Date | $1 / 1 / 2016$ |
| Midpoint Projection Date | $7 / 1 / 2016$ |

2) As previously noted in Objection Letter 1, Reponse \#8, the demographic aging adjustment is $0.75 \%$.
3) The below formula calculates the percentage that will be applied to the demos.
$1+(($ Midpoint Projection Date - Census Date) / 30) / 12 * Demographic Aging Factor
$1+(((7 / 1 / 2016-7 / 1 / 2015) / 30) / 12) * 0.75 \%$
1.0076
4) The below table represents an example census by gender and age group.

|  | Emplovee |  | Spouse |  | Child |  | Not Used |  | Aggregate |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Male | Female | Male | Female | Male | Female | Male | Female | Male | Female |
| <20 | 0 | 0 | 0 | 0 | 31 | 31 | 0 | 0 | 31 | 31 |
| 20-24 | 1 | 1 | 0 | 1 | 6 | 6 | 0 | 0 | 7 | 8 |
| 25-29 | 10 | 2 | 0 | 1 | 1 | 1 | 0 | 0 | 11 | 4 |
| 30-34 | 6 | 0 | 0 | 3 | 0 | 0 | 0 | 0 | 6 | 3 |
| 35-39 | 4 | 0 | 0 | 3 | 0 | 0 | 0 | 0 | 4 | 3 |
| 40-44 | 19 | 1 | 1 | 13 | 0 | 0 | 0 | 0 | 20 | 14 |
| 45-49 | 14 | 3 | 1 | 8 | 0 | 0 | 0 | 0 | 15 | 11 |
| 50-54 | 13 | 2 | 1 | 9 | 0 | 0 | 0 | 0 | 14 | 11 |
| 55-59 | 12 | 4 | 1 | 7 | 0 | 0 | 0 | 0 | 13 | 11 |
| 60-64 | 7 | 1 | 2 | 4 | 0 | 0 | 0 | 0 | 9 | 5 |
| 65-69 | 4 | 0 | 0 | 2 | 0 | 0 | 0 | 0 | 4 | 2 |
| 70 + | 3 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 3 | 0 |

5) For purposes of this example, we will focus on the application to our medical demo factor.

The below table represents the medical demo factors by gender and age group (Table 21 in the filing)

| Medical | Age Band | Male |  |  | Female |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Employee Factor | Spouse <br> Factor | Child Factor | Employee Factor | Spouse <br> Factor | Child <br> Factor |
|  | 00-19 | 0.483 | 0.483 | 0.483 | 0.462 | 0.462 | 0.462 |
|  | 20-24 | 0.385 | 0.387 | 0.583 | 0.833 | 1.336 | 0.680 |
|  | 25-29 | 0.461 | 0.656 | 0.721 | 0.975 | 1.426 | 1.569 |
|  | 30-34 | 0.535 | 0.651 | 0.716 | 1.179 | 1.401 | 1.541 |
|  | 35-39 | 0.632 | 0.871 | 0.959 | 1.165 | 1.261 | 1.387 |
|  | 40-44 | 0.803 | 0.975 | 1.072 | 1.212 | 1.302 | 1.432 |
|  | 45-49 | 0.993 | 1.298 | 1.427 | 1.388 | 1.496 | 1.646 |
|  | 50-54 | 1.340 | 1.737 | 1.911 | 1.574 | 1.807 | 1.988 |
|  | 55-59 | 1.700 | 2.198 | 2.418 | 1.742 | 2.057 | 2.263 |
|  | 60-64 | 2.211 | 2.963 | 3.260 | 2.136 | 2.543 | 2.797 |
|  | 65-69 | 3.658 | 3.658 | 4.024 | 2.926 | 2.926 | 3.219 |
|  | $70+$ | 4.243 | 4.243 | 4.668 | 3.414 | 3.414 | 3.756 |

6) Below is the calculation of the demo factor and applied demo factor based on the above detail. The applied demo factor refects the aged census and is what would get applied within the quote.

|  | Numerator | Demo <br> Factor | Applied <br> Demo Factor |
| :--- | :---: | :---: | :---: |
| Employee | 141.0 | 1.32 | 1.33 |
| Spouse | 98.5 | 1.73 | 1.74 |
| Child | 37.9 | 0.51 | 0.51 |
| Not Used | 0.0 | 0.00 | 0.00 |
| Aggregate | 277.4 | 1.16 | 1.17 |

## Responses to Objections

## Contents

Objection 1.................................................................................................................................... 2
Objection 2 ......................................................................................................................................... 2
Objection 3.................................................................................................................................... 2
Objection 4..................................................................................................................................... 2
Objection 5..................................................................................................................................... 3

## Objection 1

## Comment:

What is the overall rate impact on a PMPM basis?

## Response:

The overall rate impact on a PMPM basis is $-\$ 6.25$. This can be calculated using the following information from the SERFF:

Requested Rate Annual \$-W.A. = \$567.98
Prior Rate Annual \$-W.A. = \$574.23
Change Requested W.A. = -\$6.25

## Objection 2

## Comment:

Page 8 of the "Objection Letter 1 Responses" uploaded on January 21, 2016 states that, "...due to a decrease in administrative fees for GC ( $0.4 \%$ )..." What does GC stand for?

## Response:

GC stands for guaranteed cost. This is a fully insured, non-participating funding arrangement where Cigna funds all of the claims and bears all of the claims risk.

## Objection 3

## Comments:

Please update the Actuarial Certification page with appropriate reference. Currently it was referenced to "Commissioner of Insurance", which should be "Green Mountain Care Board" in Vermont. Also please include all relevant ASOPs that were observed in the Actuarial Certification.

## Response:

We have updated the Actuarial Certification to include reference to the Green Mountain Care Board.

The most relevant Actuarial Standards of Practice that were considered in the creation of the VT Cigna LG Major Medical Filing 2016 include:

- ASOP 8: Regulatory Filings for Health Benefits, Accident and Health Insurance, and Entities Providing Health Benefits
- ASOP 23: Data Quality
- ASOP 25: Credibility Procedures
- ASOP 41: Actuarial Communications

## Objection 4

## Comments:

What is the realized profit for the block of Large Group for 2014? Please make sure that the figure can be backed up by the 2014 financial statement.

## Response:

Cigna's Large Group fully insured book of business in VT only contains 2586 customers, 15 accounts. Given the low credibility of the VT book and the fact that healthcare costs are inherently volatile, the actual historical retention can differ significantly from the expected/projected retention. As such, realized profit should not be used to evaluate the appropriateness of any other pricing assumption. Cigna does not set proposed pricing factors based on historical profit levels.

Per the Supplemental Healthcare Exhibit (SHCE), the realized profit (UW Gain/Loss) for Large group as a \% of premium in VT in 2013 and 2014 is 3.7\% and 14.5\% respectively. The 2015 SHCE is not completed yet, but based on the full year Loss Ratio, we estimate the realized profit in the low single digits.

## Objection 5

## Comments:

To the extent that the 2015 data is available, what is the realized profit for the block of Large Group for 2015? Please make sure that the figure can be backed up by the 2015 annual or quarterly financial statement.

## Response:

Cigna does not prepare quarterly financial statements for VT and the 2015 annual financial statements (the Supplemental Healthcare Exhibit) for VT will not be available until April 1, 2016.

## RE: GMCB-001-16rr

Dear Ms. Henkin,
Cigna Health and Life Insurance Company (CHLIC) has reviewed the decision and order from the Green Mountain Care Board (the "Board"). While CHLIC will comply with the Board's order dated March 29, 2016, it does so without prejudice with respect to the points made in its memorandum.

Per the Board's order, in the following submission we have reduced our profit assumption from 3.5\% to $1.0 \%$, which results in an overall illustrative average manual rate decrease of $-3.9 \%$. If filing approval is received by $4 / 6 / 2016$, rates will be applied to any new quote issued after the next update to the IT rating system, which is scheduled for $5 / 16 / 2016$.

Thank you,

Matthew Danziger

## EXHIBIT I

## ACTUARIAL MEMORANDUM AND CERTIFICATION

## Scope and Purpose

The purpose of this filing is to submit CIGNA Health and Life Insurance Company’s group manual rating methodology. Our pricing model was developed to provide a consistent rating methodology across products. This filing includes Open Access Plus, PPO, Network, Indemnity, and retiree medical insurance product, and is applicable for groups of 100 or more lives. Methodology is also included for Pharmacy products.

## Benefit Description

The benefits covered in this memorandum include group health insurance coverage as described in CIGNA Health and Life Insurance Company forms HP-POL et al, and HC-TOC et al.

## Census

Member level census will be used when available. If only subscriber level data is available, penetration and translation assumptions will be used to create a member level census for manual rate development. The penetration and translation assumptions used are developed from studies of our book of business, which includes experience from similar CIGNA Health and Life Insurance Company ("CHLIC") policies. Penetration estimates the number of subscribers that will select the CIGNA Health and Life Insurance Company plan; the translation process develops projected subscribers and members within rating tiers.

## Adjustments to Base Claims

The base claim rates by area are adjusted for certain group and member characteristics. These include industry loads and discounts, age and sex demographic adjustments, and trends.

Adjustments for industry (SIC) are developed from a study of our book of business combined with results from an outside consultant's national industry factor assessment study.

Age and sex demographic adjustments are developed from a study of our book of business. The resulting age/sex slopes are normalized to represent the national census.

Trends reflect historical experience from CHLIC's group medical experience and projections for future levels. Medical trend rates are applied on a daily basis.

## Benefit Plan Adjustments

Base claims are reduced for specific cost sharing features of the product and benefit plan selected. Copay and other cost sharing benefit design related adjustments are made using assumptions regarding utilization levels by base claim component. Claim distributions are used to determine the impact of deductibles, coinsurance and out of pocket maximums. In addition, a utilization dampening factor is applied to reflect lower utilization levels as cost sharing rises.

## Renewability Clause

The benefit plans covered under this memorandum are guaranteed renewable.
Applicability
CHLIC, Inc. anticipates both renewals and new issues from the forms currently filed.

## Marketing Method

These products are sold to employer-employee groups, labor union groups and association groups through CIGNA Health and Life Insurance Company group sales offices.

## Premium Classes

Premium rates may vary by product, plan design, geographic area, group demographics, industry, effective date, experience, and underwriting discretion.

## Issue Age Range

There are no issue age restrictions in our policy forms; however, eligibility requirements must be fulfilled.

## Premium Modalization Rules

The CIGNA Health and Life Insurance Company Health Manual produces monthly premiums. Modalization factors are expressed as a function of these monthly rates as follows:

| Annual | 11.8227 |
| :--- | :---: |
| Semi-Annual | 5.9557 |
| Quarterly | 2.9852 |

## Distribution of Business

Rates vary by geographic location and group specific characteristics, including demographics. Target distribution is to groups with both single employees and employees with dependents, assuming a 40/60 distribution

## Rating

The group rates filed represent the rate level we expect to be necessary to achieve a desired average loss ratio for all group contracts. Accordingly, actual rates for groups will vary as a result of a variety of factors. These include variation in benefit plan, age, gender, family composition, size, industry, area, healthplan claim experience, and underwriting discretion.

Depending upon group size, case specific claim experience may be used to adjust the rate. Credibility is based on group size, pooling level and months of experience. Rates for partially credible groups are based on a blend of experience and manual rating.

For Minimum Premium plans, the premium paid by the policyholder is reduced for the portion of the total claim amount that is expected to be self-insured.

## Anticipated Loss Ratio

The methodology and supporting factors apply to groups of 51 or more employees.
The anticipated large group loss ratio for this policy is $82.2 \%$.
The components of Cigna's retention for our Large Group pricing are as follows:
Administrative Expenses 6.0\%
Optional Buy-ups 0.6\%
PPACA Fees 3.5\%
Risk Charge: 0.4\%
Premium and Income Taxes 2.0\%
Profit 3.5\%
State Assessments 1.5\%
Commissions 0.4\%
Total 17.8\%
Per the requirement of the GMCB, the profit assumption in our filed and approved rating methodology is $1.0 \%$. In this proposed filing, we are resubmitting assumptions for retention which includes a profit assumption of $3.5 \%$. Please see reference to Cigna's position regarding this assumption in the attached link. http://ratereview.vermont.gov/sites/dfr/files/GMCB 006 15rr_Cigna SupplementalMemo.pdf.

Per the regulations of the Affordable Care Act, Cigna has not paid a rebate in 2013, 2014, and does not anticipate paying a rebate in 2015. The 2016 target loss ratio (traditional basis), $82.2 \%$ (above), corresponds to a projected federal MLR of $86.4 \%$ after adjusting for federally defined elements such as the removal of PPACA taxes \& fees, third party vendor expenses, quality improvement expenses and premium taxes. Cigna does not anticipate paying a rebate in 2016.

## Comparison to Status Quo

This filing includes a number of changes to our medical and pharmacy rating methodologies. It is difficult to quantify each change independent of the others. The average expected decrease in manual rates in Vermont is $-1.1 \%$. This figure was calculated by comparing the current filed and approved manuals using an illustrative effective date of $1 / 1 / 2016$ to the proposed $1 / 1 / 2016$ manuals for a representative sample of Vermont sitused business. Note: The number of fully insured accounts sitused in Vermont in 2014 was 15 consistent with the company's Supplemental Health Care Exhibits.

## Changes to Methodology for the 2016 Cigna Rate Filing

- Updates to the base medical claim assumptions and the claims probability distribution
- Updates to our medical area factors and trend
- Separation of "Lab" and "Radiology" into distinct sub-cost categories. Updates to major service category weightings by sub-cost category
- For plans with combined medical and pharmacy claims: update to pharmacy deductible applicability methodology
- Updates to the collective deductible and collective out-of-pocket maximum methodologies
- Addition of the demographic aging adjustment to the demographic factor
- Addition of a cap on utilization dampening for some major service categories
- Community rate loads - addition of the following:
- More multiple offering load values
- More office surgery adjustment options
- Lock-in decrement
- Case-size adjustment
- Criteria-Based Network Adjustment
- ER/UC steerage adjustment
- Medical specialty drugs steerage adjustment
- Independent lab steerage adjustment
- Enhanced non-par claims adjustment
- Riders
- Updates to base rates for all riders
- Updates to and simplification of the Vision rider methodology, including removal of the platform dependency
- Addition of "Health Advisor" and "Personal Health Team" health management programs
- Updates to the out-of-network preventive care rider methodology
- Addition of standardized pricing for the following benefits not standardly offered:
- Short term rehab coverage for autism and developmental delays
- Applied Behavioral Analysis therapy for autism
- Hearing aids
- Gender reassignment
- Artificial insemination
- Skilled nursing
- Updates to rates for Mental Health/Substance Use Disorder products (referred to in prior filings as "Mental Health/Substance Abuse")
- Updates to the pharmacy area factors, pharmacy trend and base claim assumptions. The updates reflect the growing cost of specialty drugs, planned revisions to our drug lists, and market-specific experience. The impact of these changes will vary based on plan characteristics.

## Credibility Formula Revision

Cigna Health and Life Insurance Company uses experience rating on large employer commercial customers to set future rates based on the past experience of the customer, where a customer is defined as the aggregation of all Cigna Health and Life Insurance Company accounts associated with a given employer, nationwide.

For prospectively rated accounts, the number of member months at which the experience is considered fully credible depends on the pooling point, shown in the chart below. Partial credibility (blending experience with manual) would be reflected using the following formula:

$$
\text { Credibility }=\sqrt{\frac{\text { Member Months }}{\text { Upper Bound }}}
$$

Where the upper bound varies based on pooling point as follows:

| Pooling Point Range | Upper Bound |
| :---: | :---: |
| $\$ 0-\$ 29,999$ | 5552 |
| $\$ 30,000-\$ 59,999$ | 7000 |
| $\$ 60,000-\$ 89,999$ | 9000 |
| $\$ 90,000-\$ 139,999$ | 11000 |
| $\$ 140,000+$ | 12000 |

There is a minimum of 5 months of experience for paid claims and 4 months for incurred claims as well as a minimum overall of 100 member months to have any credibility. If member months are greater than or equal to the upper bound, credibility is $100 \%$.

## ACTUARIAL CERTIFICATION

## Opinion

In my opinion, the rates were developed using reasonable actuarial assumptions, and the rate levels are reasonable in relationship to the benefits provided. The actuarial data and experience will be maintained by the company and available for review by the Green Mountain Care Board upon request.

I certify that to the best of my knowledge and judgment, this rate filing is in compliance with the applicable laws and regulations of the State. In summary, I believe that the rating assumptions proposed will produce rates which are not excessive, inadequate, or unfairly discriminatory

## Medical Manual Rating Formulas

## 1 Transform Census

Using experience-based demographic assumptions, transform the employee-level census into a memberlevel census. Skip to Step 2 if the census is already at the member level.

## 2 Calculate Base Medical Claim Costs

Run the members from the census in Step 1 through the calculations in Step 2 to determine in-network (IN) base medical claim costs. For plans with out-of-network (OON) benefits, calculate the base medical claim costs using the methodology outlined in Step 2 but with OON assumptions and benefits. For indemnity plans, calculate all claim costs using only OON assumptions.

Calculate expected claim costs on a per member per month (PMPM) basis.

### 2.1 National Base Claims

National base claim costs for experience-rated business are established for all major service categories (MSCs). The MSCs may be further subdivided into sub-cost categories (SCCs). These are:

- MSC
- Inpatient [Hospital] (IP)
- Outpatient [Hospital] (OP)
- Emergency Room (ER)
- Primary Care Physician (PCP)
- Specialty Care Physician (SCP)
- Other
- Preventive Care
- Pharmacy (if combined with medical)
- SCC
- Facility
- Professional
- Lab
- Radiology
- Advanced Radiology (ARI)

See Table 1 - Medical Base Claims for the current base claim costs for each MSC (both IN and OON).
See Table 2 - MSC Weighting by SCC for the percentage of each MSC composed of each SCC.
Calculate the base claim cost at the SCC level by pulling the base claim costs for each MSC from the applicable pricing table and applying the appropriate weighting for each SCC.

$$
\text { Base Claim Cost by MSC and SCC }=[\text { Base Claim Cost by MSC }] \times[\text { SCC } \%]
$$

The base claim cost by MSC and SCC will be referred to as base claims, with the understanding that they have already been divided into categories. Also, the term service categories will be used to refer to MSCs divided fully into SCCs (e.g., "Inpatient Facility" or "PCP ARI"), while any specific reference to MSCs alone will be clearly noted.

Pharmacy base claims are calculated in Step 6.9.2 and are used to develop medical manual rates (during Step 2.5) only if the plan features combined medical and pharmacy claims.

If preventive care coverage is elected for children only, then the preventive care base claim cost will depend on the elected child age. See Table 3 - Preventive Care Child Age Adjustment to determine what portion of preventive care base claim costs to use.

### 2.2 National Trend

### 2.2.1 Calculate Trend Factor

To establish expected base claim costs for the policy period, the base claim costs from Step 2.1 must be trended forward from the midpoint of the base claim period (the year of experience from which base claims are determined) to the midpoint of the policy period.

In this step, calculate a trend factor based on national trend (to be applied in Step 2.2.2). A trend factor based on area-specific trend is calculated and applied in Step 2.7.

National trend values may be found in Table 4 - National Medical Trend.

- The following dates and values are required:
a. The midpoint of the base claim period
b. The midpoint of the policy period
c. Trend days: days between the midpoint of the base claim period and the midpoint of the policy period. These are the days over which trend must be applied.
- Calculate the actual trend factor to be applied for each year.
a. Each one-year period starting from the midpoint of the base claim period has an associated trend value.
b. Each of those one-year periods contains some number of trend days. The percentage of trend days that fall into each one-year period is the trend exposure percentage for that one-year period.
c. Calculate the actual portion of trend to be applied from each one-year period with:

$$
\text { Trend Factor }=[1+\text { Trend }]^{(\text {Trend Exposure Percentage })}
$$

- The total trend factor is the product of all trend factors.

### 2.2.2 Apply Trend Factor (National)

Apply the total trend factor (for national trend) determined in Step 2.2.1 to the base claims from Step 2.1.

$$
\text { Trended Base Claims }=[\text { Base Claims }] \times[\text { Total Trend Factor (National) }]
$$

### 2.3 Copays - Calculate Effective Copay Percentage

Calculating the cost-share due to copays in Step 2.5 requires the effective copay percentage, which is calculated for each service category as follows:

- Determine:
- Utilization: See Table 5 - National Utilization Rates by MSC for the annual expected utilization rate per member for each MSC.
- SCC Weighting: See Table 2 - MSC Weighting by SCC.
- Copay: Copay dollar amounts (if any) from the plan design.
- Calculate:

$$
\begin{gathered}
\text { Dollar Copay Impact }=\frac{[\text { Utilization }] \times[\text { SCC Weighting }] \times[\text { Copay }]}{12} \\
\text { Effective Copay Percentage }=\frac{\text { Dollar Copay Impact }}{\text { Trended Base Claims (from Step 2.2.2) }}
\end{gathered}
$$

The impact of copays for Mental Health/Substance Use Disorders (MH/SUD) is calculated in Step 4.3.

### 2.4 Effective Deductible and Out-of-Pocket Maximum

Throughout Step 2.5, calculations that require the deductible or out-of-pocket (OOP) maximum will use the effective deductible or effective OOP maximum. An adjustment factor is applied to the plan deductible and OOP maximum in order to arrive at the effective values. These adjustment factors depend on two things:

- The plan deductible (or OOP maximum).
- The ratio of the family deductible to the individual deductible (or OOP maximum).

For the deductible adjustment factor, see Table 7 - Medical Effective Deductible Adjustment.
For the OOP maximum adjustment factor, see Table 8 - Medical Effective OOP Maximum Adjustment.

$$
\text { Effective Deductible }=[\text { Individual Deductible }] \times \text { [Deductible Adjustment Factor] }
$$

Effective OOP Maximum $=$ [Individual OOP Maximum] $\times$ [OOP Maximum Adjustment Factor]

### 2.5 Cost-Share

Overview for this step: Calculate the expected offset to claim costs due to member cost-sharing by modifying the claims probability distribution (CPD) to remove member cost-sharing from total claims.

Steps 2.5.2 through 2.5 .9 provide detail on this process. The modified CPD at a given step will be referred to as the CPD from the step in which the modification occurred. The claims that fall into either member cost-share or Cigna cost-share will be noted.

See Table 9 - Medical Claims Probability Distribution for the full medical CPD (which will also be referred to as the base CPD).

The pharmacy column of the medical CPD is used only if the plan features combined medical and pharmacy claims.

The final member cost-sharing for the preventive care MSC is calculated in Step 2.5.9 and does not use the CPD methodology.

### 2.5.1 Benefits Dependent on Number of Visits

Benefits for a particular service category may change depending on the number of visits. For example, copays could be selected such that one copay amount applies to the first PCP visit while another copay amount applies to any subsequent visits. The change in cost-share for each distinct benefit must be accounted for in calculating final cost-share.

For those service categories, multiply the average cost of a visit (found in Table 10 - Average Visit Cost) by the number of visits at which benefits change (according to the plan design) to get the claims breakpoint. Between each claims breakpoint on the CPD, apply the appropriate cost-share calculation throughout Step 2.5 for the applicable benefit.

### 2.5.2 Base Claim Costs

Split the columns of the base CPD by the appropriate SCC weighting for the MSC (as listed in Table 2 MSC Weighting by SCC). Scale the claims for each service category by the respective trended base claims from Step 2.2.2.

If pharmacy and medical claims are combined, use the 'Estimated Annual Cost' (converted to monthly) from the pharmacy Step 6.9.2 to scale the pharmacy service category.

### 2.5.3 Copays before the Deductible

If copays apply before the deductible, multiply the service categories with copays in the Step 2.5.2 CPD by [1 - Effective Copay Percentage] (calculated in Step 2.3). Otherwise, the service categories are not adjusted.

To find the member cost-sharing from copays (before the deductible), subtract the claims in the Step 2.5.3 CPD from the claims Step 2.5.2 CPD.

### 2.5.4 Deductible

For service categories subject to the deductible, claims below the effective deductible (calculated in Step 2.4) are cost-share for the member. Proportionately remove claims below the effective deductible from the 2.5.3 CPD.

If pharmacy and medical claims are combined and cost share has been waived for certain classes of prescription drugs (e.g., waiving cost share for preventive medications), use the pharmacy CPD (outlined in Table 60, Table 61, and Table 62) to calculate the percentage of pharmacy claims subject to the deductible and only the portion of pharmacy claims that are subject to the deductible are included in the pharmacy service category.

### 2.5.5 Effective Coinsurance

For each service category, calculate the effective coinsurance as a combination of coinsurance and costsharing from copays that apply after the deductible (either or both may apply).

$$
\text { Effective Coinsurance }=[\text { Plan Coinsurance }] \times[1-\text { Effective Copay Percentage (from Step 2.3) }]
$$

If the service category has no copay after the deductible, the effective copay percentage is zero (leaving only coinsurance). If the service category is subject only to a copay after the deductible, the plan coinsurance is one (i.e., all costs beyond the copay are Cigna cost-share).

Multiply the claims for each service category by the applicable effective coinsurance. For service categories that are not subject to the deductible, use the claims from the Step 2.5.3 CPD, and for service categories subject to the deductible, use the claims from the Step 2.5.4 CPD.

If pharmacy and medical claims are combined, use [ 1 - Regular Member Cost Share] from Step 6.9.10 as the effective coinsurance for the pharmacy service category.

### 2.5.6 Out-of-Pocket Maximum

Add up all the components of member cost-share that apply to the OOP maximum. All claims above the effective OOP maximum (calculated in Step 2.4) become Cigna cost-share.

### 2.5.7 Annual Maximum

Add up the Cigna cost-share (claims in the Step 2.5.5 CPD and claims above the OOP maximum from Step 2.5.6). All claims above the annual maximum (if applicable) become member cost-share.

### 2.5.8 Member Cost-Sharing Percentage

Calculate the member cost-sharing percentage for each MSC.
Determine the Cigna cost-share for each MSC. This comprises claims in the Step 2.5.5 CPD and claims above the OOP maximum and below the annual maximum (if applicable) from Steps 2.5.6 and 2.5.7.

$$
\text { Member Cost-Sharing Percentage }=1-\frac{[\text { Cigna Cost-Share }]}{[\text { Trended Base Claims (Step 2.2.2)] }}
$$

If pharmacy and medical claims are combined, the pharmacy trended base claims are the 'Estimated Annual Cost' (converted to monthly) from Step 6.9.2. The pharmacy member cost-sharing percentage is used as the effective member cost-share for pharmacy benefits in Step 6.9.11.

### 2.5.9 Collective Accumulation Adjustment

If the plan features collective accumulation (in the deductible and/or OOP maximum), add a collective accumulation adjustment to each member cost-sharing percentage from Step 2.5.8.

Definition of terms:

- Accumulator: generic term for the deductible or OOP maximum (both if plural)
- Average family size: the ratio of family members to family subscribers
- Deductible multiplier: the ratio of the family deductible to the individual deductible
- OOP maximum multiplier: the ratio of the family OOP maximum to the individual OOP maximum

To calculate the collective accumulation adjustment: using the deductible and OOP maximum from the plan design as rated, determine the accumulators that a family and an individual within a family would experience under the three following scenarios:

- The deductible and OOP maximum are non-collective and the deductible multiplier and OOP maximum multiplier are equal
- The deductible and OOP maximum are collective and the deductible multiplier and OOP maximum multiplier are equal
- The deductible and OOP maximum follow the plan design as rated

For each scenario, determine the effective deductible and OOP maximum that an individual within a family would experience. To do this, multiply the deductible and OOP maximum for an individual within a family by the factors found in Table 13 - Effective Deductible - Collective Accumulation Adjustment and Table 14 - Effective OOP Maximum - Collective Accumulation Adjustment (the factors depend on the individual deductible or OOP, respective multiplier, and average family size). If necessary, interpolate between the nearest multipliers to calculate the adjustment.

For a plan where the deductible is collective and the OOP maximum is non-collective, if the OOP maximum for an individual is less than the family deductible plus $\$ 550$, use Table 15 - Effective Coinsurance - Collective Accumulation Adjustment to determine the effective coinsurance used in this calculation. The table is based on the plan coinsurance and the average family size.

For each scenario, apply the plan coinsurance (or effective coinsurance, if applicable), effective individual deductible, and effective individual OOP maximum to the "Total Annual Claims" column of the Step 2.5.2 CPD to calculate member cost-share. Calculate the accumulation adjustment ratio based on the calculated cost-share for the non-collective, collective, and plan scenarios as follows:

$$
\text { Accumulation Adjustment Ratio }=\frac{[\text { Plan Cost-Share }]-[\text { Non-Collective Cost-Share }]}{[\text { Collective Cost-Share }]-[\text { Non-Collective Cost-Share }]}
$$

From Table 16 - Collective Deductible Adjustment, determine the collective deductible adjustment based on the average family size, the deductible multiplier, and the individual deductible. If necessary, linearly interpolate between the appropriate nearest deductibles to find the correct decrement. Calculate:

$$
\text { Single to Total Member Ratio }=\frac{[\text { Count of Subscribers Without Dependents }]}{[\text { Total Members }]}
$$

Then
Collective Deductible Adjustment $=[1-$ Single to Total Member Ratio $] \times$ [Collective Decrement $]$
And

> Collective Accumulation Adjustment
> $\quad=$ [Collective Deductible Adjustment $] \times$ [Accumulation Adjustment Ratio $]$

### 2.5.10 Final Member Cost-Sharing Percentage

If applicable, add the collective accumulation adjustment from Step 2.5.9 to the Step 2.5.8 member costsharing percentage to get the final member cost-sharing percentage. If the plan does not have collective accumulation, the final member cost-sharing percentage is equal to the percentage calculated in Step 2.5.8.

If preventive care is covered with cost-sharing, the final member cost-sharing percentage for the preventive care MSC is calculated as a blend of the PCP and SCP final member cost-sharing percentages. See Table 11 - Preventive Care Cost-Share Weighting for the appropriate weights.

The total member cost-sharing percentage is a weighted average of the final member cost-sharing percentages across all MSCs.

### 2.5.11 Apply Cost-Sharing Offset

Apply the final member cost-sharing percentage from Step 2.5.9 to the trended base claims from Step 2.2.2.

Cost-Sharing Adjusted Claims $=[1-$ Final Member Cost-Sharing Percentage $] \times$ [Trended Base Claims $]$

### 2.6 Utilization Dampening

### 2.6.1 Calculate Utilization Dampening

Determine the utilization dampening to apply to each MSC. Values for this calculation are found in Table 12 - Medical Utilization Dampening. The preventive care MSC is not subject to utilization dampening.

Calculate utilization dampening for each MSC using the applicable final member cost-sharing percentage calculated in Step 2.5.9 and the appropriate values (A, B and C) from the table.

$$
\text { Utilization Dampening }=e^{(\mathrm{A} \times \text { Cost-Sharing }+\mathrm{B})}+\mathrm{C}
$$

### 2.6.2 Apply Utilization Dampening Factor

Apply the Utilization Dampening from Step 2.6.1 to the Cost-Sharing Adjusted Claims from Step 2.5.11.
Utilization Dampening Adjusted Claims $=[$ Utilization Dampening $] \times$ [Cost-Sharing Adjusted Claims]

### 2.7 Area-Specific Trend Relativity

### 2.7.1 Calculate Area-Specific Trend Relativity

Calculate the trend factor based on area-specific trend for the plan rating area using the methodology found in Step 2.2.1.

Area-specific trend is found in Table 28 - Medical Trend and Capitation (with additional summary detail provided in Table 29 - Medical Trend Summary).

Divide the area-specific trend factor by the trend factor based on national trend from Step 2.2.1 to find the area-specific trend relativity.

$$
\text { Area-Specific Trend Relativity }=\frac{\text { [Area-Specific Trend Factor }]}{[\text { National Trend Factor }]}
$$

### 2.7.2 Apply Area-Specific Trend Relativity

Apply the area-specific trend relativity from Step 2.7.1 to the utilization dampening adjusted claims from Step 2.6.2.

Area Trend Adjusted Claims $=$ [Area-Specific Trend Relativity] $\times$ [Utilization Dampening Adjusted Claims]

### 2.8 Base Medical Community Rate

### 2.8.1 Calculate Medical Community Rate Load

Multiply together all applicable community rate loads from Table 17 - Community Rate Loads and the area factor for the plan rating area found in Table 26 - Medical Area Factors (with additional summary detail in Table 27 - Medical Area Factor Summary) to get the medical community rate load.
2.8.2 Apply Medical Community Rate Load

Apply the medical community rate load from Step 2.8.1 to the area trend adjusted claims from Step 2.7.2.
Base Medical Community Rate $=$ [Medical Community Rate Load] $\times$ [Area Trend Adjusted Claims]

## 3 Base Medical Community Rate by Class

### 3.1 Blending Medical Rates

### 3.1.1 Calculate Blended Community Rate

For products with IN and OON components, this step blends the IN and OON base medical claim costs to create one overall rate.

Use a point-of-service (POS) load methodology to apply a load (which is based on area, product, and the IN and OON cost-share differential) to IN claims to calculate blended expected IN and OON claims. If a product is capitated, the POS load will only apply to the non-capitated portion of base medical claims.

The POS load calculation proceeds as follows:

1. Calculate the difference in cost-sharing percentages between OON and IN components. These cost-sharing percentages are the total member cost-sharing percentages (for IN and OON, respectively) from Step 2.5.8. The differential cannot be less than zero or greater than one.

$$
\text { Cost-Share Differential }=[\text { OON Cost-Sharing Percentage }]-[\text { IN Cost-Sharing Percentage }]
$$

2. Find the appropriate coefficients (A, B, and C) in Table 31 - POS Load Coefficients (with additional summary detail in Table 32 - POS Load Coefficients Summary) and calculate the base POS load.

$$
\text { Base POS Load }=A \times[\text { CSDiff }]^{2}+B \times[\text { CSDiff }]+C
$$

If the base POS load is less than zero or the plan is an indemnity plan, the base POS load is set to zero.
3. Determine the applicable OON savings program for the plan and apply the appropriate factor from Table 18 - Medical OON Program Savings Factors to the base POS load. If necessary, interpolate between table values to find the OON savings program factor.

$$
\text { POS Load }=[\text { Base POS Load }] \times[\text { OON Savings Program Factor }]
$$

4. Apply the POS load to the IN base medical community rate from Step 2.8.2.

$$
\text { Blended Community Rate }=[1+\text { POS Load }] \times[\text { IN Base Medical Community Rate }]
$$

### 3.1.2 Calculate IN and OON Utilization

The expected OON utilization is used in the adjustment for Cigna Care Network tiered benefits. This requires the POS load calculated in Step 3.1.1 and the IN and OON base medical community rates calculated in Step 2.8.2. If the product is capitated, only use the non-capitated portion of the IN base medical community rate. If the calculation yields an IN Utilization greater than $100 \%$ or less than $0 \%$, the IN Utilization is set to one and no POS load is applied.

$$
\begin{gathered}
\text { IN Utilization }=\frac{[\text { POS Load }] \times[\text { IN Rate }]-[\text { OON Rate }]}{[\text { IN Rate }]-[\text { OON Rate }]} \\
\text { OON Utilization }=1-\text { IN Utilization }
\end{gathered}
$$

### 3.2 Lifetime Maximum Adjustment

If the plan features a lifetime maximum, the appropriate adjustment is found in Table 19 - Lifetime Maximum Adjustment and will be applied in Step 3.5.

### 3.3 Industry Load

Calculate the applied industry load.

- Select the appropriate industry load from Table 20 - Industry Load based on the Standard Industrial Classification code of the group being priced.
- If applicable, determine the capitation percentage from Table 28 - Medical Trend and Capitation (with additional summary detail in Table 30 - NWK Percent Capitated Summary).

Adjusted Industry Load $=[$ Industry Load -1$] \times[1-$ Capitation Percentage $]$

$$
\text { Applied Industry Load }=1+\text { Adjusted Industry Load }
$$

### 3.4 Demographic Factor

Determine the demographic factor from Table 21 - Medical Demographic Factors for the member based on sex, age, and status (i.e. employee, spouse, or child).

To calculate the demographic aging adjustment, multiply the demographic aging trend found in Table 22 - Demographic Aging Trend by the number of years between the date the census is evaluated and the midpoint of the policy period, then add one. Multiply the demographic factor by the demographic aging adjustment to calculate the applied demographic factor.

### 3.5 Calculate Base Medical Community Rate by Class

Calculate the base medical community rate by class by multiplying together the following:

- Blended community rate from Step 3.1.1
- Lifetime maximum adjustment from Step 3.2
- Applied industry load from Step 3.3
- Applied demographic factor from Step 3.4

## 4 Calculate Claim Costs for Other Benefits

### 4.1 Riders

### 4.1.1 Medical Riders

Determine the total claim cost for applicable riders (calculated on a PMPM basis).
Determine base rider claim costs.

- See Table 25 - Medical Riders for the methodology and values required to calculate base medical rider claim costs.

Multiply the base rider claim costs by the trend factor, rider load, applied industry load, and applied demographic factor to determine total rider claim costs.

- The trend factor is the area-specific trend factor from Step 2.7.
- The rider load is calculated the same way as the community rate load from Step 2.8.1 using only applicable loads.
- $\quad$ The applied industry load is calculated in Step 3.3.
- The applied demographic factor is calculated in Step 3.4. The infertility riders have their own demographic factors to use in the calculation. These factors may be found in Table 23 - Infertility Rider Demographic Factors.

### 4.1.2 Vision Rider

Determine the vision rider claim cost PMPM, if applicable. See Appendix F: Vision Riders for all values required for this calculation.

1. For each applicable category of coverage found in Table 38 - Vision: Average Costs, calculate the coverage allowance. If a category is not covered, the coverage allowance is $\$ 0$.

$$
\text { Coverage Allowance }=\min ([\text { Average Cost], [Allowance Per Plan Design] })
$$

2. Multiply the coverage allowance by the frequency factor found in Table 39 - Vision: Frequency Factors and the utilization percentage found in Table 40 - Vision: Service Utilization to calculate the preliminary claims cost. Sum the preliminary claims costs across all categories of coverage to determine the overall preliminary claims cost.

$$
\text { Preliminary Claims Cost }=[\text { Coverage Allowance }] \times[\text { Frequency Factor }] \times[\text { Utilization }]
$$

3. Multiply the overall preliminary claims cost by the industry factor, case size adjustment, and trend factor to calculate the vision rider claim cost per employee per year (PEPY). The industry factor, case size adjustment, and annual trend used for the trend factor are found in Table 41 - Vision: Trend and Adjustments.

Vision Rider Claim Cost PEPY

$$
=[\text { Preliminary Claims Cost }] \times[\text { Industry Factor }] \times[\text { Case Size Adj }] \times[\text { Trend Factor }]
$$

4. Divide the vision rider claim cost PEPY by 12 and by the ratio of members to employees to calculate the vision rider claim cost PMPM.

### 4.2 Health Management Program Savings

Using the values in Table 24 - Health Management Program Savings, calculate the expected claim cost savings for applicable health management programs.

- To calculate expected savings for Your Health First, multiply the decrement in the table by the sum of the blended medical community rate from Step 3.1.1 and the rider claim cost (before demographic and industry factors are applied). Then multiply by the applied industry load from Step 3.3 and the applied demographic factor from Step 3.4.
- To calculate expected savings for Healthy Pregnancies, Healthy Babies and Comprehensive Oncology, trend the PMPM dollar amounts in the table using the area-specific trend factor from Step 2.7, and then multiply by the applied industry load from Step 3.3 and the applied demographic factor from Step 3.4.
- To calculate expected savings for Health Advisor and Personal Health Team, use the PEPM dollar amounts in the table.

### 4.3 Mental Health/Substance Use Disorders

Determine the MH/SUD claim cost. See Appendix E: Mental Health/Substance Use Disorders for rates, trend, and adjustments. Note that the MH/SUD cost calculation uses an MH/SUD-specific trend and that the base claim cost varies within the given range based on plan deductible, copays, and coinsurance.

MH/SUD is ordinarily a capitated product but can be covered as fee-for-service (FFS). If it's covered as FFS, apply the FFS adjustment, otherwise apply only trend to the MH/SUD base claim cost.

$$
\text { MH/SUD Claim Cost }=[\text { MH/SUD Base Claim Cost }] \times[1+\text { Trend }] \times[1+\text { FFS Adjustment }]
$$

### 4.4 Medicare Coordination of Benefits

Rates for post-65 Medicare-eligible retirees are adjusted to reflect the coordination of benefits (COB) with Medicare.

The Medicare COB adjustment is based on the percentage of Medicare-eligible members in the population being rated, the age, sex, and geographic location of the membership, the coordination of benefits method being applied, the underlying medical product type, and the plan deductible, coinsurance, copay, OOP maximum, and other cost-sharing.

## 5 Aggregate Medical Claim Costs

Sum the following to calculate the total medical claim cost for the individual:

- The base medical community rate by class from Step 3.5.
- The total rider claim cost from Step 4.1.
- The claim cost savings from health management programs from Step 4.2.
- The MH/SUD claim cost from Step 4.3.

Combine the individual claim costs for the entire census to determine the aggregate medical claim cost (on a PMPM basis):

$$
\text { Aggregate Medical Claim Cost }=\frac{\text { Sum of Individual Claim Costs }}{\text { Total Members }}
$$

## Pharmacy Manual Rating Formulas

Use this section to calculate expected pharmacy claim costs.
The following formulas detail the pharmacy claim cost calculation process. The specific steps are applied to each pharmacy cost category, except as specifically noted. There are no separate provisions made for OON pharmacy benefits. All benefits are assumed to be IN. Claim costs for each individual life are calculated separately and the results are aggregated. Where noted, a separate set of assumptions or calculations are used for cases run on the FACETS platform.

## 6 Pharmacy Rating Step-by-Step

### 6.1 Extract the Average Wholesale Price (AWP) per Script

Extract the AWP per script by cost category for both retail and mail order based on the formulary type (Standard, Value, Performance, Advantage, or Generics Only). All formularies are open. Separate assumptions exist for the FACETS platform. The AWP per script assumptions are found in the following tables:

- Table 42 - Retail AWP per Script Assumptions
- Table 43 - Mail Order AWP per Script Assumptions
- Table 69 - FACETS Retail AWP per Script Assumptions
- Table 70 - FACETS Mail Order AWP per Script Assumptions

### 6.2 Apply the Discount

Discounts are applied to the AWP per script calculated in Step 6.1 based on retail pharmacy network, funding type/product (HMO, non-HMO, or experience rated) and employer size. Please note that separate assumptions exist for the FACETS platform, which vary only by pricing package. The discount assumptions are found in the following tables:

- Table 46 - Retail Discounts and Dispensing Fees (National Network)
- Table 47 - Retail Discounts and Dispensing Fees (National Network without CVS)
- Table 48 - Retail Discounts and Dispensing Fees (National Network without Walgreens)
- Table 49 - Retail Discounts and Dispensing Fees (National Network without CVS \& Walgreens)
- Table 73 - FACETS Retail Discounts and Dispensing Fees
- Table 74 - FACETS Mail Order Discounts and Dispensing Fees

The discount assumptions vary by drug source (retail or mail order) and drug type (generic, brand, or specialty). Discounts also vary by calendar year, so discount assumptions are averaged for policy years that cross multiple calendar years:

## Average Discount

$=(2014$ Calendar Year Discount $\times \%$ of Policy Year in 2014)

+ (2015 Calendar Year Discount $\times \%$ of Policy Year in 2015)
+ (2016 Calendar Year Discount $\times \%$ of Policy Year in 2016)
$+(2017$ Calendar Year Discount $\times \%$ of Policy Year in 2017)
In addition, separate discounts may apply for 90 -day retail scripts. If the 90 -day retail option is selected, retail discounts are further adjusted:

Adjusted Retail Average Discount
$=30$-Day Retail Average Discount $\times$ ( $1-\%$ of Retail from 90-Day)
+90 -Day Retail Average Discount $\times \%$ of Retail from 90-Day
where
\% of Retail from 90-Day

$$
\begin{aligned}
& =[(\text { Retail Script Count } \times 30-\text { Day Retail Shift to } 90-\text { Day Retail }) \\
& +(\text { Mail Order Script Count } \times \text { Mail Order Shift to } 90 \text {-Day Retail } \times \text { Mail Order Multiplier })] \\
& \div \text { Retail Script Count }
\end{aligned}
$$

The 90-day retail shift assumptions and mail order multiplier are found in the following tables:

- Table 54 - Shift Assumptions for Plans with 90-Day Retail
- Table 55 - Mail Order Multiplier Assumption

If a product is selected where multiple drug types are included in a particular tier, a blended discount must be calculated. The following example describes how a blended discount would be calculated if nonpreventive generics and preferred brand drugs were in the same tier:

Blended Discount for Tier with Non-Preventive Generics and Preferred Brands
$=[($ Non-Preventive Generic Script Count $\times$ Non-Preventive Generic AWP per Script
$\times$ Generic Discount)

+ (Preferred Brand Script Count $\times$ Preferred Brand AWP per Script $\times$ Brand Discount)]
$\div[($ Non-Preventive Generic Script Count $\times$ Non-Preventive Generic AWP per Script)
+ (Preferred Brand Script Count $\times$ Preferred Brand AWP per Script)]
Once the discounts are determined, apply them to AWP per script calculated in Step 6.1:
Step 6.2 Discounted AWP per Script $=$ Step 6.1 AWP per Script $\times(1-$ Discount $)$

### 6.3 Calculate Gross Cost per Script

Dispensing fees are added to the discounted AWP per script calculated in Step 6.2 based on retail pharmacy network, funding type/product (HMO, non-HMO, or experience rated) and employer size. Separate assumptions exist for the FACETS platform, which vary only by pricing package. The dispensing fee assumptions are found in the following tables:

- Table 46 - Retail Discounts and Dispensing Fees (National Network)
- Table 47 - Retail Discounts and Dispensing Fees (National Network without CVS)
- Table 48 - Retail Discounts and Dispensing Fees (National Network without Walgreens)
- Table 49 - Retail Discounts and Dispensing Fees (National Network without CVS \& Walgreens)
- Table 73 - FACETS Retail Discounts and Dispensing Fees
- Table 74 - FACETS Mail Order Discounts and Dispensing Fees

The dispensing fee assumptions vary by drug source (retail or mail order) and drug type (generic, brand, or specialty). Dispensing fees also vary by calendar year, so dispensing fee assumptions are averaged for policy years that cross multiple calendar years:

Average Dispensing Fee
$=(2014$ Calendar Year Dispensing Fee $\times \%$ of Policy Year in 2014)

+ (2015 Calendar Year Dispensing Fee $\times \%$ of Policy Year in 2015)
+ (2016 Calendar Year Dispensing Fee $\times \%$ of Policy Year in 2016)
$+(2017$ Calendar Year Dispensing Fee $\times \%$ of Policy Year in 2017)
In addition, separate dispensing fees apply for 90-day retail scripts. If the 90-day retail option is selected, retail dispensing fees are further adjusted:

Adjusted Retail Average Dispensing Fee
$=30$-Day Retail Average Dispensing Fee $\times$ ( $1-\%$ of Retail from 90-Day)

+ 90-Day Retail Average Dispensing Fee $\times \%$ of Retail from 90-Day
where
\% of Retail from 90-Day
$=[($ Retail Script Count $\times 30-$ Day Retail Shift to $90-$ Day Retail $)$
+ (Mail Order Script Count $\times$ Mail Order Shift to 90 -Day Retail $\times$ Mail Order Multiplier) $]$
$\div$ Retail Script Count
The 90-day retail shift assumptions and mail order multiplier are found in the following tables:
- Table 54 - Shift Assumptions for Plans with 90-Day Retail
- Table 55 - Mail Order Multiplier Assumption

Sales tax is not included in the gross cost per script calculation because of insignificance, so once the dispensing fees are determined, add them to the discounted AWP per script calculated in Step 6.2:

Step 6.3 Gross Cost per Script $=$ Step 6.2 Discounted AWP per Script + Dispensing Fee per Script

### 6.4 Calculate and Apply the Cost Trend Factor

The gross cost per script calculated in Step 6.3 was developed using assumptions from the base claim period. To establish expected costs for the policy period, the gross cost per script must be trended forward from the midpoint of the base claim period to the midpoint of the policy period. Area-specific trends should be used, if applicable, to determine the unit cost trend factor. Otherwise, the national trend should be used. Unit cost trend assumptions are found in the following table:

- Table 57 - Pharmacy: Cost Trend

Determine the number of days from the midpoint of the base claim period to the midpoint of the policy period ("trend days"). The base claim period midpoint is estimated as 182.5 days after the base claim effective date. The policy period midpoint is the average of the policy effective date and the policy end date.

Each year following the base claim period midpoint is a trend year and has an associated unit cost trend factor. Determine the number of trend days that fall into each trend year and divide by the total days in the trend year to arrive at the portion of each trend year applicable to the case being rated ("exposure percentage"). Now the adjusted unit cost trend factor can be calculated for each trend year:

Adjusted Unit Cost Trend Factor $=(1+\text { Trend Year Unit Cost Trend Factor })^{\text {Exposure Percentage }}$
The final unit cost trend factor is the product of the adjusted unit cost trend factors for each trend year. The following example outlines the unit cost trend factor calculation using national trend values:
$a=$ Base claim effective date $=1 / 1 / 2014$
$b=$ Policy effective date $=4 / 1 / 2016$
c $=$ Policy end date $=3 / 31 / 2017$
d = Annual cost trend factor for 2015/2014 = 10.34\%
e = Annual cost trend factor for 2016/2015 = 12.34\%
$\mathrm{f}=$ Annual cost trend factor for 2017/2016 = 12.34\%
$\mathrm{g}=$ Base claim period midpoint $=\mathrm{a}+182.5$ days $=7 / 2 / 2014$
$h=$ Policy period midpoint $=(b+c) \div 2=9 / 30 / 2016$
$\mathrm{i}=$ Total trend days $=\mathrm{g}-\mathrm{f}=820$

$$
\begin{aligned}
& \mathrm{j}=\text { Trend days from } 2014 \text { to } 2015=363.5 \\
& \mathrm{k}=\text { Trend days from } 2015 \text { to } 2016=366 \\
& \mathrm{I}=\text { Trend days from } 2016 \text { to } 2017=91.5
\end{aligned}
$$

Final Unit Cost Trend Factor $=(1+d)^{\frac{j}{365}} \times(1+e)^{\frac{k}{366}} \times(1+f)^{\frac{l}{365}}$

$$
=1.1034^{0.996} \times 1.234^{1} \times 1.234^{0.25}=1.276
$$

Once the final unit cost trend factor is determined, apply it to the gross cost per script calculated in Step 6.3:

Step 6.4 Trended Gross Cost per Script $=$ Step 6.3 Gross Cost per Script $\times$ Final Unit Cost Trend Factor

### 6.5 Extract the Annual Script Counts Per Member

Extract the annual script counts per member (script count per member per year [PMPY]) by cost category for both retail and mail order based on the formulary type (Standard, Value, Performance, Advantage, or Generics Only). Pull in script counts for optional cost categories, such as lifestyle drugs, as needed. If an optional cost category has not been selected, set the script count to zero. Please note that separate assumptions exist for the FACETS platform. The script count assumptions are found in the following tables:

- Table 44 - Retail Script Count PMPY Assumptions
- Table 45 - Mail Order Script Count PMPY Assumptions
- Table 71 - FACETS Retail Script Count PMPY Assumptions
- Table 72 - FACETS Mail Order Script Count PMPY Assumptions

Script counts are adjusted when the mandatory generic program is selected:
Adjusted Generic Script Count
= Generic Script Count

+ (Non-Preferred Brand Multi-Source Script Count $\times$ Mandatory Generic Shift Factor)
Adjusted Non-Preferred Brand Multi-Source Script Count
$=$ Non-Preferred Brand Multi-Source Script Count $\times$ ( $1-$ Mandatory Generic Shift Factor)
Scripts that are shifted from the non-preferred brand multi-source category to the generic category are assumed to be proportionately distributed between the preventative generic and non-preventative generic buckets. If specialty drugs are rated on a $4^{\text {th }}$ tier, no specialty drug utilization is expected to shift to the generic category. The mandatory generic shift factor is found in the following table:
- Table 56 - Mandatory Generic Shift Factor

Script counts are also adjusted if the 90-day retail option is selected:
Adjusted Retail Script Count
$=$ Retail Script Count + (Mail Order Script Count $\times$ Mail Order Shift to 90-Day Retail
$\times$ Mail Order Multiplier)
Adjusted Mail Order Script Count $=$ Mail Order Script Count $\times(1-$ Mail Order Shift to 90 -Day Retail)
If both the mandatory generic program and 90 -day retail option are selected, script counts are first adjusted for the mandatory generic program and then the 90 -day retail option.

### 6.6 Calculate and Apply Utilization Trend Factor

The script counts calculated in Step 6.5 were developed using assumptions from the base claim period. To establish expected costs for the policy period, the script counts must be trended forward from the midpoint of the base claim period to the midpoint of the policy period. Area-specific trends should be used, if applicable, to determine the unit cost trend factor. Otherwise, the national trend should be used. Utilization trend assumptions are found in the following table:

- Table 58 - Pharmacy: Utilization Trend

Calculate the utilization trend factor by re-running Step 6.4 with the utilization trend factors. Once the final utilization trend factor is determined, apply it to the script counts calculated in Step 6.5:

Step 6.6 Trended Script Count PMPY $=$ Step 6.5 Script Count PMPY $\times$ Final Utilization Trend Factor

### 6.7 Calculate Gross Trended PMPM

Calculate the gross trended cost PMPM by multiplying the trended script count by gross trended cost per script and dividing by 12 (since script counts are PMPY):

Step 6.7 Gross Trended PMPM
$=\frac{\text { Step 6.4 Trended Gross Cost per Script } \times \text { Step 6.6 Trended Script Count PMPY }}{12}$

### 6.8 Calculate Gross Area-Adjusted PMPM

The gross trended PMPM is adjusted for cost differences by area. The area factors are found in the following table:

- Table 59 - Pharmacy: Area Factors

Extract the area factor based on the site and funding type/product (HMO, non-HMO, experience rated NWK, experience rated non-NWK) being rated and apply it to the gross trended cost PMPM calculated in Step 6.7:

Step 6.8 Gross Area-Adjusted PMPM $=$ Step 6.7 Gross Trended PMPM $\times$ Pharmacy Area Factor

### 6.9 Calculate Regular Member Cost Share Using Pharmacy CPD

The pharmacy CPD is composed of the following tables:

- Table 60 - Pharmacy: CPD (\% Preventive)
- Table 61 - Pharmacy: CPD (Cost per Script)
- Table 62 - Pharmacy: CPD (Scripts PMPY)

Unless otherwise specified, weighted averages mentioned in Step 6.9 are calculated using the probabilities in the pharmacy CPD.

Begin the member cost share calculation by extracting the copays, coinsurance, deductible, applicable deductible waivers, OOP maximum, and plan maximum for the plan design being rated.

### 6.9.1 Adjust CPD to Appropriate Rate Level

Scale the cost per script and script counts PMPY for each row and tier of the pharmacy CPD to reflect the expected cost and utilization derived in Steps 6.1 through 6.6:

Step 6.9.1 Scaled Cost per Script $=$ Original CPD Cost per Script $\times$ Cost per Script Scalar
Step 6.9.1 Scaled Script Count PMPY $=$ Original CPD Script Count PMPY $\times$ Script Count PMPY Scalar
where
Cost per Script Scalar $=$ Step $6.4 \div$ Original CPD Weighted Average Cost per Script
Script Count PMPY Scalar $=$ Step $6.6 \div$ Original CPD Weighted Average Script Count PMPY

### 6.9.2 Calculate Annual Cost

Determine the annual cost for each row and tier using the scaled pharmacy CPD from Step 6.9.1. In addition, the tiers should be further split into preventive and non-preventive using Table 60 - Pharmacy: CPD (\% Preventive):

Step 6.9.2 Preventive Gross Trended PMPY
$=$ Step 6.9.1 Scaled Cost per Script $\times$ Step 6.9.1 Scaled Script Count PMPY $\times \%$ Preventive
Step 6.9.2 Non-Preventive Gross Trended PMPY
$=$ Step 6.9.1 Scaled Cost per Script $\times$ Step 6.9.1 Scaled Script Count PMPY $\times(1-\%$ Preventive $)$
If specialty drugs are rated on a $4^{\text {th }}$ tier, all specialty utilization is assumed to be non-preventative.
In addition, calculate the total annual cost for each row as the sum of the preventive and non-preventive gross trended PMPY values:

Step 6.9.2 Total Annual Cost
$=$ Sum(Step 6.9.2 Preventive Gross Trended PMPY, Step 6.9.2 Non-Preventive Gross Trended PMPY)
Finally, calculate the estimated annual cost across all rows and tiers as the weighted average of the Step 6.9.2 Total Annual Cost:

Step 6.9.2 Estimated Annual Cost $=$ Sum(Step 6.9.2 Total Annual Cost $\times$ Probability $)$

### 6.9.3 Calculate Deductible and Deductible Waiver Impacts

Compare the applicable annual cost for each row to the deductible to see how much of the deductible applies for each row. If the deductible is waived for preventive drugs or certain tiers, do not include those costs in the applicable annual cost for each row:

Step 6.9.3 Deductible Applied $=$ Min[Applicable Annual Cost, Deductible]
where
Applicable Annual Cost $=$ Step 6.9.2 Total Annual Cost - Sum(Waived Step 6.9.2 Gross Trended PMPY)
For plans with a combined deductible, no deductible is assumed. Instead the impact of the combined deductible is calculated using the combined medical and pharmacy CPD.

### 6.9.4 Calculate Percentage of Cost Remaining after Applying Deductible

Calculate the percentage of total annual cost remaining after applying the deductible for each cell of the CPD:

Step 6.9.4 Percentage of Cost Remaining $=1-\frac{\text { Step 6.9.3 Deductible Applied }}{\text { Step 6.9.2 Total Annual Cost }}$

### 6.9.5 Calculate the effective value of copays and coinsurance

Define the effective copay as the member cost per script after copays, coinsurance, maximum copays, minimum copays and the cost per script are considered.

For tiers with copays:
Step 6.9.5 effective copay
$=$ Min[Copay, step 6.9.1 Scaled Cost per Script]
For tiers with coinsurance:

Step 6.9.5 effective copay
= Min\{ Max[ Member Coinsurance x step 6.9.1 Scaled Cost per Script, minimum copay] , maximum copay

### 6.9.6 Adjust Copays for Costs Covered by the Deductible

For each cell of the CPD, multiply the effective value of copays by the portion of costs remaining after the deductible has been applied

Step 6.9.6 Member Copay Value $=$ Step 6.9.4 Percentage of Cost Remaining x Step 6.9.5 Effective Copay

### 6.9.7 Calculate Annual Member Cost Share

Determine the annual member cost share for each row due to copays, coinsurance, and deductible:
Step 6.9.7 Annual Member Cost Share
$=$ Sum(Step 6.9.6 Member Copay Value $\times$ Step 6.9.1 Scaled Script Count PMPY)

+ Step 6.9.3 Deductible Applied
6.9.8 Adjust for Out-of-Pocket (0OP) Maximum

Adjust the annual member cost share calculated in Step 6.9.7 for each row to reflect the impact of an OOP maximum, if applicable:

Step 6.9.8 Member Cost Share after 00P Max $=$ Min[OOP Max, Step 6.9.7 Annual Member Cost Share]
For plans with a combined OOP maximum, no OOP maximum is assumed. Instead the impact of the combined OOP maximum is calculated using the combined medical and pharmacy CPD.

### 6.9.9 Adjust for Plan Maximum

Adjust the member cost share after OOP max calculated in Step 6.9.8 for each row to reflect the impact of a plan maximum, if applicable:

Step 6.9.9 Member Cost Share after 00P Max \& Plan Max

### 6.9.10 Calculate Regular Member Cost Share

Determine the regular member cost share as the ratio of the estimated annual member cost to the estimated total cost:

Step 6.9.10 Regular Member Cost Share
$=\frac{\text { Weighted Average(Step 6.9.9 Member Cost Share after 00P Max \& Plan Max) }}{\text { Step 6.9.2 Estimated Annual Cost }}$

### 6.9.11 Calculate Effective Member Cost Share

For plans with a combined deductible and/or combined OOP maximum, the regular member cost share calculated in Step 6.9.10 is used in Step 2.5 to determine the effective member cost share for the pharmacy benefit.

For all other plans, the effective member cost share is set equal to the regular member cost share calculated in Step 6.9.10.

### 6.10 Calculate Adjusted Cost Share

Optional cost categories, such as lifestyle drugs, may be moved to the fourth tier. For optional cost categories moved to the fourth tier, increase the effective member cost share calculated in Step 6.9.11 by $5 \%$ to estimate the increased cost sharing in the fourth tier. Otherwise, use the effective member cost share.

Moving an optional cost category to the fourth tier should always increase the cost share for that class, but it will have minimal impact to overall rates because of low utilization levels.

Step 6.10 Adjusted Member Cost Share $=$ Step 6.9.11 Effective Member Cost Share $\times 1.05$
Please note that this step does not apply to the FACETS platform.

### 6.11 Calculate Net Pharmacy PMPM

Now that member cost share has been calculated, determine the remaining pharmacy plan cost (or net pharmacy PMPM).

For all standard cost categories and any optional cost categories that have not been moved to the fourth tier, apply the effective member cost share from Step 6.9.11:

Step 6.11 Net Pharmacy PMPM

$$
=\text { Step 6.8 Gross Area-Adjusted PMPM } \times(1-\text { Step 6.9.11 Effective Member Cost Share })
$$

For optional cost categories that have been moved to the fourth tier, apply the adjusted member cost share from Step 6.10:

Step 6.11 Net Pharmacy PMPM

$$
\text { = Step 6.8 Gross Area-Adjusted PMPM } \times(1-\text { Step 6.10 Adjusted Member Cost Share })
$$

### 6.12 Calculate Aggregate Metrics

Many of the following summary metrics are used for analysis purposes and visibility, but do not impact the final rate. Metrics that do impact the final rate will be referenced in later steps.

### 6.12.1 Average AWP per Script

Calculate the average AWP per script across all cost categories as a weighted average using the trended script counts from Step 6.6 as the weights:

Step 6.12.1 Average AWP per Script $=\frac{\text { Sum(Step 6.1 AWP per Script } \times \text { Step 6.6 Trended Script Count PMPY) }}{\text { Sum(Step 6.6 Trended Script Count PMPY) }}$

### 6.12.2 Average Discounted AWP per Script

Calculate the average discounted AWP per script using the method for calculating the average AWP per script in Step 6.12.1.

### 6.12.3 Average Dispensing Fee per Script

Calculate the average dispensing fee per script using the method for calculating the average AWP per script in Step 6.12.1.

### 6.12.4 Average Discount

Derive the average discount using the average AWP per script from Step 6.12.1 and the average discounted AWP per script from Step 6.12.2:

Step 6.12.4 Average Discount $=1-\frac{\text { Step 6.12.2 Average Discounted AWP per Script }}{\text { Step 6.12.1 Average AWP per Script }}$

### 6.12.5 Average Cost Trend Factor, Utilization Trend Factor, and Area Factor

The trend factors and area factor are the same for all cost categories, so their average is the same as the individual factors.

### 6.12.6 Average Gross Cost per Script and Trended Gross Cost per Script

The average gross cost per script and trended gross cost per script are calculated using the method for calculating the individual cost categories:

Step 6.12.6 Average Gross Cost per Script
= Step 6.12.2 Average Discounted AWP per Script + Step 6.12.3 Average Dispensing Fee per Script
Step 6.12.6 Average Trended Gross Cost per Script
$=$ Step 6.12.6 Average Gross Cost per Script $\times$ Step 6.12.5 Average Cost Trend Factor
6.12.7 Total Script Counts, Trended Script Counts, Gross Trended PMPM, Gross Area-Adjusted PMPM, and Net Pharmacy PMPM

Calculate the total for each metric as the sum across all cost categories for the respective metric.

### 6.12.8 Average Adjusted Cost Share

Derive the average adjusted member cost share using the total net pharmacy rate and total gross areaadjusted PMPM from Step 6.12.7:

Step 6.12.8 Average Adjusted Member Cost Share $=1-\frac{\text { Step 6.12.7 Total Net Pharmacy PMPM }}{\text { Step 6.12.7 Total Gross Area-Adjusted PMPM }}$
All calculations going forward are done on an aggregate basis only, so calculations are no longer split into cost categories.

### 6.13 Apply the Clinical Program Factor

Calculate the clinical program factor as the sum of the individual clinical programs selected. The applicable factors for various clinical programs are found in the following tables:

- Table 64 - Pharmacy: Clinical Management Programs
- Table 63 - Global Step Therapy Program

The global step therapy program varies by formulary type and the level of intervention. If no intervention is desired for a particular drug therapy category, do not include a factor for that category when calculating the clinical program factor.

Apply the clinical program factor to the net pharmacy rate from Step 6.12.7:
Step 6.13 Clinical-Adjusted Net Pharmacy PMPM
$=$ Step 6.12.7 Net Pharmacy PMPM $\times$ ( $1-$ Clinical Program Factor $)$

### 6.14 Apply the Pharmacy Demographic Factor

Extract the pharmacy demographic factor from Table 65 - Pharmacy: Demographic Factors based on the age, gender, and status (employee, spouse, or child) of the individual being rated. Unisex factors exist if gender is not a permitted rating variable. Multiply the pharmacy demographic factor by the demographic aging adjustment calculated in Step 3.4 to calculate the adjusted pharmacy demographic factor.

Apply the adjusted pharmacy demographic factor to the clinical-adjusted net pharmacy Step 6.13:
Step 6.14 Clinical/Demo-Adjusted Net Pharmacy PMPM
$=$ Step 6.13 Clinical-Adjusted PMPM $\times$ Adjusted Pharmacy Demographic Factor

### 6.15 Apply the Industry Factor

Extract the industry factor from Table 20 - Industry Load and apply it to the clinical- and demographicadjusted net pharmacy PMPM calculated in Step 6.14:

Step 6.15 Clinical/Demo/Industry-Adjusted Net Pharmacy PMPM
$=$ Step 6.14 Clinical/Demo-Adjusted PMPM $\times$ Industry Factor

### 6.16 Apply the Pharmacy Mandates Adjustment

Extract the mandate factor from Table 66 - Pharmacy: Mandate Factors, if applicable, based on the state being rated. Apply it to the clinical-, demographic-, and industry-adjusted net pharmacy PMPM calculated in Step 6.15:

Step 6.16 Clinical/Demo/Industry/Mandate-Adjusted Net Pharmacy PMPM
$=$ Step 6.15 Clinical/Demo/Industry-Adjusted Net Pharmacy PMPM $\times(1+$ Mandate Adjustment $)$

### 6.17 Apply Utilization Dampening Factor

Extract the utilization dampening factor from Table 67 - Pharmacy: Utilization Dampening Factors based on the average adjusted member cost share calculated in Step 6.12.8. Apply it to the clinical-, demographic-, industry-, and mandate-adjusted net pharmacy PMPM calculated in Step 6.16 to determine the total benefit pharmacy community rate by class (CRC):

Step 6.17 Total Benefit Pharmacy CRC
= Step 6.16 Clinical/Demo/Industry/Mandate-Adjusted Net Pharmacy PMPM
$\times$ Utilization Dampening Factor

### 6.18 Apply Miscellaneous Pharmacy Adjustments

The following multiplicative adjustments are applied to the total benefit pharmacy CRC calculated in Step 6.17 to arrive at the adjusted total benefit pharmacy CRC:

Step 6.18 Adjusted Total Benefit Pharmacy CRC
$=$ Step 6.17 Total Benefit Pharmacy CRC $\times(1+$ Step 6.18.1 Generic Requirement Adjustment $)$
$\times(1+$ Step 6.18.2 Mail Order Deductible Waiver Adjustment $)$
$\times(1+$ Step 6.18.3 Women's Preventive Health Adjustment $)$
$\times(1+$ Step 6.18.34 Mail Order Specialty Drug 30 Day Limit $)$
$\times(1+$ Step 6.18.35 Mandatory Mail Load $)$

### 6.18.1 Generic Requirement Adjustment

Plan designs that do not encourage generic use through a mandatory generic or dispense-as-written program receive a $1 \%$ load. All other plan designs do not receive a load.

### 6.18.2 Mail Order Deductible Waiver Adjustment

Plan designs with a deductible that waive that deductible for mail order prescriptions receive a $5 \%$ load to estimate the increased cost due to the decreased member cost sharing. All other plan designs do not receive a load.

### 6.18.3 Women's Preventive Health Adjustment

Providing coverage of certain drugs and devices without cost sharing to address the Patient Protection and Affordable Care Act Women's Preventive Health Services requirement is reflected as a load.
Combined deductible/OOP plans receive a $2.8 \%$ load, while all other plans receive a $1 \%$ load.

### 6.18.4 Mail Order Specialty Drug 30 Day Limit

Limiting specialty drug fills to 30 day supplies reduces waste. Plans that elect this feature receive a $0.4 \%$ reduction while plans that choose not to elect this feature receive no adjustment.

### 6.18.5 Mandatory Mail for Maintenance Drugs Load

When clients require customers to obtain their maintenance medications via Cigna's mail order pharmacy costs increase do to overhead expense costs associated with filling a script at mail. Plans that have mandatory mail receive a $1 \%$ load. Plans that incentivize mail order utilization receive a $0.5 \%$ load.

### 6.19 Determine Final Pharmacy CRC and Pharmacy CR

Similar to medical, pharmacy rates receive community rate adjustments, but not all of the community rate adjustments from Step 2.8.1 apply to pharmacy. Only the following factors apply:

- Multiple Offering Load

The multiple offering load applied to the pharmacy rate is the sum of the medical factor from Step 2.8.1 and the additional pharmacy load from Table 68 - Pharmacy: Multiple Offering Load, if applicable, based on the site being rated and whether there is more than one product offering being considered.

- Deductible Accumulation Adjustment
- Open Access Load
- Consumerism Adjustment

The product of these adjustments becomes the pharmacy community rate load, which is applied to the adjusted total benefit pharmacy CRC calculated in Step 6.18:

Step 6.19 Final Pharmacy CRC
$=$ Step 6.18 Adjusted Total Benefit Pharmacy CRC $\times$ Pharmacy Community Rate Load
The demographic and industry factors are removed to determine the pharmacy community rate (CR):
Step 6.19 Final Pharmacy CR $=\frac{\text { Step 6.19 Final Pharmacy CRC }}{\text { 6.14 Demographic Factor } \times \text { Step 6.15 Industry Factor }}$

### 6.20 Aggregate Individual Claim Costs

Combine the individual PMPM pharmacy claim costs for the entire census to determine the aggregate pharmacy claim cost PMPM:

Step 6.20 Aggregate Pharmacy CRC $=\frac{$|  Sum of Step 6.19 Final Pharmacy CRC for all  |
| :---: |
|  individuals  |}{Sum of the number of individuals}

Sum of Step 6.19 Final Pharmacy CR for all
Step 6.20 Aggregate Pharmacy CR $=$ individuals
Sum of the number of individuals

## Final Rate

## 7 Calculate Final Rate

Use the following to combine medical and pharmacy rates and calculate the final PMPM rate. If the pharmacy benefit is carved out, it will not be included in the calculation.

$$
\text { Final PMPM Rate }=\frac{[\text { Step } 5 \text { Aggregate Medical Claim Cost }]+[\text { Step 6.20 Aggregate Pharmacy CRC }]}{[\text { Applied Loss Ratio }]}
$$

Using the demographic assumptions from Step 1, determine the number of members per subscriber and calculate the per employee per month (PEPM) rate:

Final PEPM Rate $=[$ Final PMPM Rate $] \times[$ Number of Members per Subscriber $]$

## Appendix A: Experience Rating Formula for Medical Products

Blended claims are a weighted average of the group's official experience and the manually rated claims.
The group's official experience is calculated as fee-for-service paid claims, adjusted for large claims and capitation, then multiplied by a trend factor. The claims are then adjusted for any changes in liability. This experience could include Cigna experience on the particular group or a portion of the group or prior carrier experience.

The manually rated claims are calculated according to the formulas and tables filed and approved with the state.

The weights used to blend the claims are based on the credibility of the group. The blended claims may be adjusted for underwriting discretion. A retention charge is then added for administrative expenses (inclusive of network access fees), taxes, commissions, and profit. The premium is then adjusted for the pooling charge where applicable.

## Appendix B: Cigna Care Network (CCN) Tiered Benefits

A manual rate will be developed for the underlying plan, consistent with this filing's base methodology and reflecting the tier 1 level of cost-sharing for SCP/PCP office visits.

The rate adjustment will equal [1 - Savings \%], according to the following formula (and the formula components are defined below):

Savings \%

$$
\begin{aligned}
& =[1-\text { OON Percent }] \\
& \times[\text { Benefit Save } \times \text { Percent Non-CCN Dollars }+ \text { Benefit Save } \times \text { Percent Non-Tiered Dollars }]
\end{aligned}
$$

Notes:

- If a client decides to administer the tier 1 benefit to non-tiered physicians, raw benefit save is not multiplied by the percentage of members in the non-tiered group.
- PCP and SCP savings are calculated separately and then combined for a total impact to the manual rate.

Definitions:

- Benefit Save - Benefit savings ran through the regular methodology as if the whole group was making the copay or coinsurance change from tier 1 to tier 2 benefits.
- Percent Non-CCN Dollars - Percentage of total physician dollars at a market level that represent categories of doctors where we do define CCN vs. non CCN but the doctors did not earn the designation.
- Percent Non-Tiered Dollars - Percentage of total physician dollars at a market level that represent categories of doctors where we do not designate CCN vs. non CCN.
- OON Percent - Developed for the underlying plan, consistent with this filing's base methodology and reflecting the Tier 1 benefit level. Calculated as OON Utilization in Step 3.1.2.

## Appendix C: General Medical Tables

Table 1 - Medical Base Claims

|  | Major Service Categories (dollars PMPM) |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Inpatient <br> (IP) | Outpatient (OP) | Primary Care Physician (PCP) | Emergency <br> Room (ER) | Specialty Care Physician (SCP) | Other | Preventive Care |
| Experience-Rated In-Network | 109.76 | 113.30 | 21.24 | 31.87 | 46.03 | 14.16 | 16.28 |
| Experience-Rated Out-of-Network | 159.15 | 164.28 | 30.80 | 46.21 | 66.74 | 20.53 | 23.60 |

Table 2 - MSC Weighting by SCC

|  | Major Service Categories |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Sub-Cost Categories | Inpatient (Hospital) | Outpatient (Hospital) | ER | PCP | SCP | Other |
| Facility | 83.5\% | 55.0\% | 100.0\% | 0.0\% | 0.0\% | 100.0\% |
| Professional | 16.5\% | 17.0\% | 0.0\% | 90.0\% | 81.0\% | 0.0\% |
| Lab | 0.0\% | 6.8\% | 0.0\% | 8.0\% | 3.6\% | 0.0\% |
| Radiology | 0.0\% | 10.2\% | 0.0\% | 2.0\% | 5.4\% | 0.0\% |
| Advanced Radiology (ARI) | 0.0\% | 11.0\% | 0.0\% | 0.0\% | 10.0\% | 0.0\% |

Table 3 - Preventive Care Child Age Adjustment

| Elected Child Age | Portion of Preventive Care Base Claim Cost |
| :--- | :--- |
| $\leq 2$ | 0.16 |
| 3 to 64 | Linearly interpolate between 0.16 at 2 and 1.0 at 65 |
| $\geq 65$ | 1.0 |

Table 4 - National Medical Trend

|  | $\mathbf{2 0 1 5 / 2 0 1 4}$ | $\mathbf{2 0 1 6 + / 2 0 1 5}$ |
| :--- | :---: | :---: |
| IN Trend | $8.5 \%$ | $8.5 \%$ |
| OON Trend | $8.5 \%$ | $8.5 \%$ |

Table 5 - National Utilization Rates by MSC

|  | Major Service Categories |  |  |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | IP Per Day | IP Per Admit | OP | ER | PCP | SCP | Other |
| National Utilization | See Note | 0.09 | 0.12 | 0.40 | 1.90 | 2.10 | 0.00 |
| Note: To determine utilization for IP Per Day, consult Table 6 <br> correspond to the 'Max Dand the 'Average Days' which <br> utilization. |  |  |  |  |  |  |  |

Table 10 - Average Visit Cost

|  | PCP Office Visit | SCP Office Visit | OON Office Visit |
| :--- | :---: | :---: | :---: |
| Average Cost | 110 | 190 | 190 |
| Note: Trend applies to these values |  |  |  |
| If PCP and SCP have a combined limit, weight these values 45\% PCP and 55\% SCP |  |  |  |

Table 11 - Preventive Care Cost-Share Weighting

| Major Service Category | Weighting |
| :--- | :---: |
| PCP | $75 \%$ |
| SCP | $25 \%$ |

Table 12 - Medical Utilization Dampening

|  | IP | OP | PCP Copay | PCP Ded/Coins | ER | SCP Copay | SCP Ded/Coins | Other |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| A | -2.17 | -1.34 | -0.68 | -0.83 | 0.00 | -0.71 | -2.06 | -1.78 |
| B | 0.12 | 0.21 | 0.11 | 0.37 | 0.00 | 0.15 | 0.57 | 0.30 |
| Applicable MSC | IP | OP | PCP | PCP | ER | SCP | SCP | Other |
|  |  |  |  |  |  |  |  |  |
| C | This factor is equal to [(Total Cost-Share) $\times(-0.16)+(0.011)$ ] and is the same for all MSCs |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |
|  | Indemnity (NY metro) |  |  | Indemnity (NJ) |  | Indemnity (all other areas) |  |  |
| A <br> B <br> Applicable MSC | $\begin{array}{r} -0.10 \\ 0.27 \end{array}$ |  |  | $-0.10$ |  | -0.32 |  |  |
|  |  |  |  | $0.36$ |  | 0.22 |  |  |
|  | These indemnity UD factors apply to the aggregate cost-share |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |
| Note: Utilization dampening has a floor of 0.20 . There is a cap of 1.12 on PCP, 1.17 on SCP, and 1.25 on Other. |  |  |  |  |  |  |  |  |

Table 17 - Community Rate Loads

## ER/UC Steerage Adjustment

Using the applicable copay and/or coinsurance per the plan design and the average steerable visit cost below, calculate the average actual visit cost to a member for an ER visit and Urgent Care facility visit. Look up the load on the table based on visit cost differential and the Effective ER deductible from Step 2.4. No load is applied if Urgent Care is subject to the deductible or if the calculated Urgent Care facility visit cost is $\$ 0$.

| Average Steerable visit cost |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| ER | 1000 |  |  |  |  |
| Urgent Care | 160 |  |  |  |  |
|  | Effective ER Deductible |  |  |  |  |
| Visit Cost Difference | 0 | 500 | 1000 |  | 3000 | 6000 |
| 0 | 1.0000 | 0.9995 | 0.9990 | 0.9975 | 0.9970 |
| 100 | 0.9995 | 0.9989 | 0.9984 | 0.9974 | 0.9970 |
| 200 | 0.9990 | 0.9984 | 0.9979 | 0.9973 | 0.9970 |
| 300 | 0.9985 | 0.9980 | 0.9975 | 0.9972 | 0.9970 |
| 400 | 0.9980 | 0.9976 | 0.9972 | 0.9971 | 0.9970 |
| 500 | 0.9975 | 0.9973 | 0.9970 | 0.9970 | 0.9970 |

## Medical Specialty Drugs Steerage Adjustment

The following adjustments apply for plan designs where the deductible applies to medical specialty drugs administered in outpatient facilities, the deductible does not apply to medical specialty drugs administered in either (or both of) the home or at a physician's office, and the member coinsurance for those services is greater than $0 \%$.

|  | Deductible Waiver by Place of Administration |  |  |
| :---: | :---: | :---: | :---: |
|  | Physician's <br> office | Home | Both Home and <br> Physician's Office |
| 0 | 1.0000 | 1.0000 | 1.0000 |
| 1000 | 0.9997 | 0.9999 | 0.9996 |
| 2000 | 0.9994 | 0.9998 | 0.9992 |
| 3000 | 0.9991 | 0.9997 | 0.9988 |
| 4000 | 0.9988 | 0.9996 | 0.9984 |
| 5000 | 0.9985 | 0.9995 | 0.9980 |

## Independent Lab Steerage Adjustment

The following adjustments apply for plan designs where the deductible does not apply to independent lab facility services, the deductible does apply to either (or both of) physician's office lab services or outpatient facility lab services, and the member coinsurance for those services is greater than $0 \%$.

|  | Deductible by Place of Service |  |  |
| :---: | :---: | :---: | :---: |
| Deductible | Outpatient <br> Facility | Physician's <br> Office | Both OP Facility and <br> Physician's Office |
| 0 | 1.0000 | 1.0000 | 1.0000 |
| 1000 | 0.9998 | 0.9998 | 0.9996 |
| 2000 | 0.9996 | 0.9996 | 0.9992 |
| 3000 | 0.9994 | 0.9994 | 0.9988 |
| 4000 | 0.9992 | 0.9992 | 0.9984 |
| 5000 | 0.9990 | 0.9990 | 0.9980 |

Enhanced Non-Par Claims Adjustment
See Table 33 - Enhanced Non-Par. Claims Adjustment and Table 34 Enhanced Non-Par. Claims Adjustment Summary for appropriate loads.

| Durable Medical Equipment OON Buy Up | IN PMPM multiplied by the POS Load |
| External Prosthetic Appliances (EPA) | 0.2953 base PMPM |
| External Prosthetic Appliances OON Buy Up | IN PMPM multiplied by the POS Load |
| DME and EPA Combined | 1.7665 Base PMPM |
| DME and EPA Combined OON Buy Up | IN PMPM multiplied by the POS Load |
| Routine Foot Disorders Buy Up | 1.0189 for a maximum less than $\$ 1000$ <br> 1.1987 for a maximum $\$ 1000$ or greater |
| Routine Foot Disorders OON Buy Up | IN PMPM multiplied by the POS Load |
| Organ Transplants OON | 0.2397 base PMPM |
| Home Health Care | -1.2467 when annual maximum days are set to zero. Slope of 0.0189 per day. <br> 1.3545 cap on coverage. |
| Infertility Treatment - Buy Up \#1 | 1.2814 base PMPM |
| Infertility Treatment - Buy Up \#1 OON | IN PMPM multiplied by the POS Load |
| Infertility Treatment - Buy Up \#2 | Base Cost PMPM $=5.2897 \times\left[\frac{\text { Max }}{18844.37}\right]^{0.6}$ 10.5794 cap on coverage |
| Infertility Treatment - Buy Up \#2 OON | IN PMPM multiplied by the POS Load |
| Infertility Only | Difference between the cost of Infertility Treatment Buy Up \#2 and Buy Up \#1 |
| Infertility Only OON | IN PMPM multiplied by the POS Load |
| Complex Psych Program Savings | -0.1798 base PMPM |
| TMJ | 0.3716 base PMPM |

| Rider | Methodology |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| Narcotics Therapy Program Savings | -0.1798 base PMPM |  |  |  |
| Alternative Care (Acupuncture, Naturopathy, Massage) | Naturopathy and Acupuncture are available with or without massage at $\$ 300$ or $\$ 600$ limits. <br> 1.5643 - Without massage, $\$ 300$ limit. <br> 2.2835 - Without massage, $\$ 600$ limit <br> 1.8041 - With massage, $\$ 300$ limit <br> 3.3624 - With massage, $\$ 600$ limit |  |  |  |
| Acupuncture | This doesn't apply if an Alternative Care election is made. 0 - Less than 10 visits <br> $0.4695-10$ to 11 visits <br> $0.5634-12$ to 14 visits <br> $0.6690-15$ to 19 visits <br> 0.8451 - For 20 or more visits. |  |  |  |
| Preventive Care OON Exclusion | If OON preventive care is not covered: -0.7500 base PMPM |  |  |  |
| Family Planning Preventive Care Exemption | Apply a factor of 0.96 to the preventive care base rate in Step 2.1. |  |  |  |
| The following therapies riders use curves based on the number of visits. One slope (PMPM per visit) applies up to some number of visits ("Breakpoint") while another slope applies past that number of visits. <br> For example, if Speech Therapy is offered with a 30 day limit (with a limit past the breakpoint), then the final cost would be: $\text { ST PMPM }=[1 \text { st Slope }] \times 20+[2 \text { nd Slope }] \times 10=0.00545 \times 20+0.00136 \times 10=0.123$ <br> If Cardiac and Pulmonary Rehab is included with these benefits, it does not have a pricing impact. |  |  |  |  |
| Therapy | $1^{\text {st }}$ slope | Breakpoint | $2^{\text {nd }}$ slope | Cap |
| Speech Therapy (ST) | 0.00545 | 20 days | 0.00136 | 0.20432 |
| Outpatient Speech, Hearing, and Occupational Therapy (OSHOT) | 0.01090 | 20 days | 0.00272 | 0.40865 |
| Chiropractic Therapy (Chiro) | 0.05449 | 60 days | 0.01453 | 3.70508 |
| Physical Therapy (PT) | 0.10150 | 20 days | 0.02383 | 3.45963 |
| PT and Occupational Therapy (OT) | 0.10695 | 20 days | 0.02519 | 3.63262 |
| PT and OSHOT | 0.11240 | 20 days | 0.02655 | 3.86828 |
| PT, OT, ST, and Chiro | 0.13827 | 30 days | 0.05709 | 7.57336 |
| The following riders are not standardly offered but are frequently requested. If elected, they are multiplicative adjustments applied to total expected medical and pharmacy claims as calculated in Step 5 and Step 6.20. If the coverage is mandated, then the adjustment is already embedded in the rating area factor and does not apply separately. |  |  |  |  |

## Medical Manual Rating Formulas

## 1 Transform Census

Using experience-based demographic assumptions, transform the employee-level census into a memberlevel census. Skip to Step 2 if the census is already at the member level.

## 2 Calculate Base Medical Claim Costs

Run the members from the census in Step 1 through the calculations in Step 2 to determine in-network (IN) base medical claim costs. For plans with out-of-network (OON) benefits, calculate the base medical claim costs using the methodology outlined in Step 2 but with OON assumptions and benefits. For indemnity plans, calculate all claim costs using only OON assumptions.

Calculate expected claim costs on a per member per month (PMPM) basis.

### 2.1 National Base Claims

National base claim costs for experience-rated business are established for all major service categories (MSCs). The MSCs may be further subdivided into sub-cost categories (SCCs). These are:

- MSC
- Inpatient [Hospital] (IP)
- Outpatient [Hospital] (OP)
- Emergency Room (ER)
- Primary Care Physician (PCP)
- Specialty Care Physician (SCP)
- Other
- Preventive Care
- Pharmacy (if combined with medical)
- SCC
- Facility
- Professional
- Lab
- Radiology
- Advanced Radiology (ARI)

See Table 1 - Medical Base Claims for the current base claim costs for each MSC (both IN and OON).
See Table 2 - MSC Weighting by SCC for the percentage of each MSC composed of each SCC.
Calculate the base claim cost at the SCC level by pulling the base claim costs for each MSC from the applicable pricing table and applying the appropriate weighting for each SCC.

$$
\text { Base Claim Cost by MSC and SCC }=[\text { Base Claim Cost by MSC }] \times[\text { SCC } \%]
$$

The base claim cost by MSC and SCC will be referred to as base claims, with the understanding that they have already been divided into categories. Also, the term service categories will be used to refer to MSCs divided fully into SCCs (e.g., "Inpatient Facility" or "PCP ARI"), while any specific reference to MSCs alone will be clearly noted.

Pharmacy base claims are calculated in Step 6.9.2 and are used to develop medical manual rates (during Step 2.5) only if the plan features combined medical and pharmacy claims.

If preventive care coverage is elected for children only, then the preventive care base claim cost will depend on the elected child age. See Table 3 - Preventive Care Child Age Adjustment to determine what portion of preventive care base claim costs to use.

### 2.2 National Trend

### 2.2.1 Calculate Trend Factor

To establish expected base claim costs for the policy period, the base claim costs from Step 2.1 must be trended forward from the midpoint of the base claim period (the year of experience from which base claims are determined) to the midpoint of the policy period.

In this step, calculate a trend factor based on national trend (to be applied in Step 2.2.2). A trend factor based on area-specific trend is calculated and applied in Step 2.7.

National trend values may be found in Table 4 - National Medical Trend.

- The following dates and values are required:
a. The midpoint of the base claim period
b. The midpoint of the policy period
c. Trend days: days between the midpoint of the base claim period and the midpoint of the policy period. These are the days over which trend must be applied.
- Calculate the actual trend factor to be applied for each year.
a. Each one-year period starting from the midpoint of the base claim period has an associated trend value.
b. Each of those one-year periods contains some number of trend days. The percentage of trend days that fall into each one-year period is the trend exposure percentage for that one-year period.
c. Calculate the actual portion of trend to be applied from each one-year period with:

$$
\text { Trend Factor }=[1+\text { Trend }]^{(\text {Trend Exposure Percentage })}
$$

- The total trend factor is the product of all trend factors.

### 2.2.2 Apply Trend Factor (National)

Apply the total trend factor (for national trend) determined in Step 2.2.1 to the base claims from Step 2.1.

$$
\text { Trended Base Claims }=[\text { Base Claims }] \times[\text { Total Trend Factor (National) }]
$$

### 2.3 Copays - Calculate Effective Copay Percentage

Calculating the cost-share due to copays in Step 2.5 requires the effective copay percentage, which is calculated for each service category as follows:

- Determine:
- Utilization: See Table 5 - National Utilization Rates by MSC for the annual expected utilization rate per member for each MSC.
- SCC Weighting: See Table 2 - MSC Weighting by SCC.
- Copay: Copay dollar amounts (if any) from the plan design.
- Calculate:

$$
\begin{gathered}
\text { Dollar Copay Impact }=\frac{[\text { Utilization }] \times[\text { SCC Weighting }] \times[\text { Copay }]}{12} \\
\text { Effective Copay Percentage }=\frac{\text { Dollar Copay Impact }}{\text { Trended Base Claims (from Step 2.2.2) }}
\end{gathered}
$$

The impact of copays for Mental Health/Substance Use Disorders (MH/SUD) is calculated in Step 4.3.

### 2.4 Effective Deductible and Out-of-Pocket Maximum

Throughout Step 2.5, calculations that require the deductible or out-of-pocket (OOP) maximum will use the effective deductible or effective OOP maximum. An adjustment factor is applied to the plan deductible and OOP maximum in order to arrive at the effective values. These adjustment factors depend on two things:

- The plan deductible (or OOP maximum).
- The ratio of the family deductible to the individual deductible (or OOP maximum).

For the deductible adjustment factor, see Table 7 - Medical Effective Deductible Adjustment.
For the OOP maximum adjustment factor, see Table 8 - Medical Effective OOP Maximum Adjustment.

$$
\text { Effective Deductible }=[\text { Individual Deductible }] \times \text { [Deductible Adjustment Factor] }
$$

Effective OOP Maximum $=$ [Individual OOP Maximum] $\times$ [OOP Maximum Adjustment Factor]

### 2.5 Cost-Share

Overview for this step: Calculate the expected offset to claim costs due to member cost-sharing by modifying the claims probability distribution (CPD) to remove member cost-sharing from total claims.

Steps 2.5.2 through 2.5 .9 provide detail on this process. The modified CPD at a given step will be referred to as the CPD from the step in which the modification occurred. The claims that fall into either member cost-share or Cigna cost-share will be noted.

See Table 9 - Medical Claims Probability Distribution for the full medical CPD (which will also be referred to as the base CPD).

The pharmacy column of the medical CPD is used only if the plan features combined medical and pharmacy claims.

The final member cost-sharing for the preventive care MSC is calculated in Step 2.5.9 and does not use the CPD methodology.

### 2.5.1 Benefits Dependent on Number of Visits

Benefits for a particular service category may change depending on the number of visits. For example, copays could be selected such that one copay amount applies to the first PCP visit while another copay amount applies to any subsequent visits. The change in cost-share for each distinct benefit must be accounted for in calculating final cost-share.

For those service categories, multiply the average cost of a visit (found in Table 10 - Average Visit Cost) by the number of visits at which benefits change (according to the plan design) to get the claims breakpoint. Between each claims breakpoint on the CPD, apply the appropriate cost-share calculation throughout Step 2.5 for the applicable benefit.

### 2.5.2 Base Claim Costs

Split the columns of the base CPD by the appropriate SCC weighting for the MSC (as listed in Table 2 MSC Weighting by SCC). Scale the claims for each service category by the respective trended base claims from Step 2.2.2.

If pharmacy and medical claims are combined, use the 'Estimated Annual Cost' (converted to monthly) from the pharmacy Step 6.9.2 to scale the pharmacy service category.

### 2.5.3 Copays before the Deductible

If copays apply before the deductible, multiply the service categories with copays in the Step 2.5.2 CPD by [1 - Effective Copay Percentage] (calculated in Step 2.3). Otherwise, the service categories are not adjusted.

To find the member cost-sharing from copays (before the deductible), subtract the claims in the Step 2.5.3 CPD from the claims Step 2.5.2 CPD.

### 2.5.4 Deductible

For service categories subject to the deductible, claims below the effective deductible (calculated in Step 2.4) are cost-share for the member. Proportionately remove claims below the effective deductible from the 2.5.3 CPD.

If pharmacy and medical claims are combined and cost share has been waived for certain classes of prescription drugs (e.g., waiving cost share for preventive medications), use the pharmacy CPD (outlined in Table 60, Table 61, and Table 62) to calculate the percentage of pharmacy claims subject to the deductible and only the portion of pharmacy claims that are subject to the deductible are included in the pharmacy service category.

### 2.5.5 Effective Coinsurance

For each service category, calculate the effective coinsurance as a combination of coinsurance and costsharing from copays that apply after the deductible (either or both may apply).

$$
\text { Effective Coinsurance }=[\text { Plan Coinsurance }] \times[1-\text { Effective Copay Percentage (from Step 2.3) }]
$$

If the service category has no copay after the deductible, the effective copay percentage is zero (leaving only coinsurance). If the service category is subject only to a copay after the deductible, the plan coinsurance is one (i.e., all costs beyond the copay are Cigna cost-share).

Multiply the claims for each service category by the applicable effective coinsurance. For service categories that are not subject to the deductible, use the claims from the Step 2.5.3 CPD, and for service categories subject to the deductible, use the claims from the Step 2.5.4 CPD.

If pharmacy and medical claims are combined, use [ 1 - Regular Member Cost Share] from Step 6.9.10 as the effective coinsurance for the pharmacy service category.

### 2.5.6 Out-of-Pocket Maximum

Add up all the components of member cost-share that apply to the OOP maximum. All claims above the effective OOP maximum (calculated in Step 2.4) become Cigna cost-share.

### 2.5.7 Annual Maximum

Add up the Cigna cost-share (claims in the Step 2.5.5 CPD and claims above the OOP maximum from Step 2.5.6). All claims above the annual maximum (if applicable) become member cost-share.

### 2.5.8 Member Cost-Sharing Percentage

Calculate the member cost-sharing percentage for each MSC.
Determine the Cigna cost-share for each MSC. This comprises claims in the Step 2.5.5 CPD and claims above the OOP maximum and below the annual maximum (if applicable) from Steps 2.5.6 and 2.5.7.

$$
\text { Member Cost-Sharing Percentage }=1-\frac{[\text { Cigna Cost-Share }]}{[\text { Trended Base Claims (Step 2.2.2)] }}
$$

If pharmacy and medical claims are combined, the pharmacy trended base claims are the 'Estimated Annual Cost' (converted to monthly) from Step 6.9.2. The pharmacy member cost-sharing percentage is used as the effective member cost-share for pharmacy benefits in Step 6.9.11.

### 2.5.9 Collective Accumulation Adjustment

If the plan features collective accumulation (in the deductible and/or OOP maximum), add a collective accumulation adjustment to each member cost-sharing percentage from Step 2.5.8.

Definition of terms:

- Accumulator: generic term for the deductible or OOP maximum (both if plural)
- Average family size: the ratio of family members to family subscribers
- Deductible multiplier: the ratio of the family deductible to the individual deductible
- OOP maximum multiplier: the ratio of the family OOP maximum to the individual OOP maximum

To calculate the collective accumulation adjustment: using the deductible and OOP maximum from the plan design as rated, determine the accumulators that a family and an individual within a family would experience under the three following scenarios:

- The deductible and OOP maximum are non-collective and the deductible multiplier and OOP maximum multiplier are equal
- The deductible and OOP maximum are collective and the deductible multiplier and OOP maximum multiplier are equal
- The deductible and OOP maximum follow the plan design as rated

For each scenario, determine the effective deductible and OOP maximum that an individual within a family would experience. To do this, multiply the deductible and OOP maximum for an individual within a family by the factors found in Table 13 - Effective Deductible - Collective Accumulation Adjustment and Table 14 - Effective OOP Maximum - Collective Accumulation Adjustment (the factors depend on the individual deductible or OOP, respective multiplier, and average family size). If necessary, interpolate between the nearest multipliers to calculate the adjustment.

For a plan where the deductible is collective and the OOP maximum is non-collective, if the OOP maximum for an individual is less than the family deductible plus $\$ 550$, use Table 15 - Effective Coinsurance - Collective Accumulation Adjustment to determine the effective coinsurance used in this calculation. The table is based on the plan coinsurance and the average family size.

For each scenario, apply the plan coinsurance (or effective coinsurance, if applicable), effective individual deductible, and effective individual OOP maximum to the "Total Annual Claims" column of the Step 2.5.2 CPD to calculate member cost-share. Calculate the accumulation adjustment ratio based on the calculated cost-share for the non-collective, collective, and plan scenarios as follows:

$$
\text { Accumulation Adjustment Ratio }=\frac{[\text { Plan Cost-Share }]-[\text { Non-Collective Cost-Share }]}{[\text { Collective Cost-Share }]-[\text { Non-Collective Cost-Share }]}
$$

From Table 16 - Collective Deductible Adjustment, determine the collective deductible adjustment based on the average family size, the deductible multiplier, and the individual deductible. If necessary, linearly interpolate between the appropriate nearest deductibles to find the correct decrement. Calculate:

$$
\text { Single to Total Member Ratio }=\frac{[\text { Count of Subscribers Without Dependents }]}{[\text { Total Members }]}
$$

Then
Collective Deductible Adjustment $=[1-$ Single to Total Member Ratio $] \times$ [Collective Decrement $]$
And

> Collective Accumulation Adjustment
> $\quad=$ [Collective Deductible Adjustment $] \times$ [Accumulation Adjustment Ratio $]$

### 2.5.10 Final Member Cost-Sharing Percentage

If applicable, add the collective accumulation adjustment from Step 2.5.9 to the Step 2.5.8 member costsharing percentage to get the final member cost-sharing percentage. If the plan does not have collective accumulation, the final member cost-sharing percentage is equal to the percentage calculated in Step 2.5.8.

If preventive care is covered with cost-sharing, the final member cost-sharing percentage for the preventive care MSC is calculated as a blend of the PCP and SCP final member cost-sharing percentages. See Table 11 - Preventive Care Cost-Share Weighting for the appropriate weights.

The total member cost-sharing percentage is a weighted average of the final member cost-sharing percentages across all MSCs.

### 2.5.11 Apply Cost-Sharing Offset

Apply the final member cost-sharing percentage from Step 2.5.9 to the trended base claims from Step 2.2.2.

Cost-Sharing Adjusted Claims $=[1-$ Final Member Cost-Sharing Percentage $] \times$ [Trended Base Claims $]$

### 2.6 Utilization Dampening

### 2.6.1 Calculate Utilization Dampening

Determine the utilization dampening to apply to each MSC. Values for this calculation are found in Table 12 - Medical Utilization Dampening. The preventive care MSC is not subject to utilization dampening.

Calculate utilization dampening for each MSC using the applicable final member cost-sharing percentage calculated in Step 2.5.9 and the appropriate values (A, B and C) from the table.

$$
\text { Utilization Dampening }=e^{(\mathrm{A} \times \text { Cost-Sharing }+\mathrm{B})}+\mathrm{C}
$$

### 2.6.2 Apply Utilization Dampening Factor

Apply the Utilization Dampening from Step 2.6.1 to the Cost-Sharing Adjusted Claims from Step 2.5.11.
Utilization Dampening Adjusted Claims $=[$ Utilization Dampening $] \times$ [Cost-Sharing Adjusted Claims]

### 2.7 Area-Specific Trend Relativity

### 2.7.1 Calculate Area-Specific Trend Relativity

Calculate the trend factor based on area-specific trend for the plan rating area using the methodology found in Step 2.2.1.

Area-specific trend is found in Table 28 - Medical Trend and Capitation (with additional summary detail provided in Table 29 - Medical Trend Summary).

Divide the area-specific trend factor by the trend factor based on national trend from Step 2.2.1 to find the area-specific trend relativity.

$$
\text { Area-Specific Trend Relativity }=\frac{\text { [Area-Specific Trend Factor }]}{[\text { National Trend Factor }]}
$$

### 2.7.2 Apply Area-Specific Trend Relativity

Apply the area-specific trend relativity from Step 2.7.1 to the utilization dampening adjusted claims from Step 2.6.2.

Area Trend Adjusted Claims $=$ [Area-Specific Trend Relativity] $\times$ [Utilization Dampening Adjusted Claims]

### 2.8 Base Medical Community Rate

### 2.8.1 Calculate Medical Community Rate Load

Multiply together all applicable community rate loads from Table 17 - Community Rate Loads and the area factor for the plan rating area found in Table 26 - Medical Area Factors (with additional summary detail in Table 27 - Medical Area Factor Summary) to get the medical community rate load.
2.8.2 Apply Medical Community Rate Load

Apply the medical community rate load from Step 2.8.1 to the area trend adjusted claims from Step 2.7.2.
Base Medical Community Rate $=$ [Medical Community Rate Load] $\times$ [Area Trend Adjusted Claims]

## 3 Base Medical Community Rate by Class

### 3.1 Blending Medical Rates

### 3.1.1 Calculate Blended Community Rate

For products with IN and OON components, this step blends the IN and OON base medical claim costs to create one overall rate.

Use a point-of-service (POS) load methodology to apply a load (which is based on area, product, and the IN and OON cost-share differential) to IN claims to calculate blended expected IN and OON claims. If a product is capitated, the POS load will only apply to the non-capitated portion of base medical claims.

The POS load calculation proceeds as follows:

1. Calculate the difference in cost-sharing percentages between OON and IN components. These cost-sharing percentages are the total member cost-sharing percentages (for IN and OON, respectively) from Step 2.5.8. The differential cannot be less than zero or greater than one.

$$
\text { Cost-Share Differential }=[\text { OON Cost-Sharing Percentage }]-[\text { IN Cost-Sharing Percentage }]
$$

2. Find the appropriate coefficients (A, B, and C) in Table 31 - POS Load Coefficients (with additional summary detail in Table 32 - POS Load Coefficients Summary) and calculate the base POS load.

$$
\text { Base POS Load }=A \times[\text { CSDiff }]^{2}+B \times[\text { CSDiff }]+C
$$

If the base POS load is less than zero or the plan is an indemnity plan, the base POS load is set to zero.
3. Determine the applicable OON savings program for the plan and apply the appropriate factor from Table 18 - Medical OON Program Savings Factors to the base POS load. If necessary, interpolate between table values to find the OON savings program factor.

$$
\text { POS Load }=[\text { Base POS Load }] \times[\text { OON Savings Program Factor }]
$$

4. Apply the POS load to the IN base medical community rate from Step 2.8.2.

$$
\text { Blended Community Rate }=[1+\text { POS Load }] \times[\text { IN Base Medical Community Rate }]
$$

### 3.1.2 Calculate IN and OON Utilization

The expected OON utilization is used in the adjustment for Cigna Care Network tiered benefits. This requires the POS load calculated in Step 3.1.1 and the IN and OON base medical community rates calculated in Step 2.8.2. If the product is capitated, only use the non-capitated portion of the IN base medical community rate. If the calculation yields an IN Utilization greater than $100 \%$ or less than $0 \%$, the IN Utilization is set to one and no POS load is applied.

$$
\begin{gathered}
\text { IN Utilization }=\frac{[\text { POS Load }] \times[\text { IN Rate }]-[\text { OON Rate }]}{[\text { IN Rate }]-[\text { OON Rate }]} \\
\text { OON Utilization }=1-\text { IN Utilization }
\end{gathered}
$$

### 3.2 Lifetime Maximum Adjustment

If the plan features a lifetime maximum, the appropriate adjustment is found in Table 19 - Lifetime Maximum Adjustment and will be applied in Step 3.5.

### 3.3 Industry Load

Calculate the applied industry load.

- Select the appropriate industry load from Table 20 - Industry Load based on the Standard Industrial Classification code of the group being priced.
- If applicable, determine the capitation percentage from Table 28 - Medical Trend and Capitation (with additional summary detail in Table 30 - NWK Percent Capitated Summary).

Adjusted Industry Load $=[$ Industry Load -1$] \times[1-$ Capitation Percentage $]$

$$
\text { Applied Industry Load }=1+\text { Adjusted Industry Load }
$$

### 3.4 Demographic Factor

Determine the demographic factor from Table 21 - Medical Demographic Factors for the member based on sex, age, and status (i.e. employee, spouse, or child).

To calculate the demographic aging adjustment, multiply the demographic aging trend found in Table 22 - Demographic Aging Trend by the number of years between the date the census is evaluated and the midpoint of the policy period, then add one. Multiply the demographic factor by the demographic aging adjustment to calculate the applied demographic factor.

### 3.5 Calculate Base Medical Community Rate by Class

Calculate the base medical community rate by class by multiplying together the following:

- Blended community rate from Step 3.1.1
- Lifetime maximum adjustment from Step 3.2
- Applied industry load from Step 3.3
- Applied demographic factor from Step 3.4

## 4 Calculate Claim Costs for Other Benefits

### 4.1 Riders

### 4.1.1 Medical Riders

Determine the total claim cost for applicable riders (calculated on a PMPM basis).
Determine base rider claim costs.

- See Table 25 - Medical Riders for the methodology and values required to calculate base medical rider claim costs.

Multiply the base rider claim costs by the trend factor, rider load, applied industry load, and applied demographic factor to determine total rider claim costs.

- The trend factor is the area-specific trend factor from Step 2.7.
- The rider load is calculated the same way as the community rate load from Step 2.8.1 using only applicable loads.
- $\quad$ The applied industry load is calculated in Step 3.3.
- The applied demographic factor is calculated in Step 3.4. The infertility riders have their own demographic factors to use in the calculation. These factors may be found in Table 23 - Infertility Rider Demographic Factors.

### 4.1.2 Vision Rider

Determine the vision rider claim cost PMPM, if applicable. See Appendix F: Vision Riders for all values required for this calculation.

1. For each applicable category of coverage found in Table 38 - Vision: Average Costs, calculate the coverage allowance. If a category is not covered, the coverage allowance is $\$ 0$.

$$
\text { Coverage Allowance }=\min ([\text { Average Cost], [Allowance Per Plan Design] })
$$

2. Multiply the coverage allowance by the frequency factor found in Table 39 - Vision: Frequency Factors and the utilization percentage found in Table 40 - Vision: Service Utilization to calculate the preliminary claims cost. Sum the preliminary claims costs across all categories of coverage to determine the overall preliminary claims cost.

$$
\text { Preliminary Claims Cost }=[\text { Coverage Allowance }] \times[\text { Frequency Factor }] \times[\text { Utilization }]
$$

3. Multiply the overall preliminary claims cost by the industry factor, case size adjustment, and trend factor to calculate the vision rider claim cost per employee per year (PEPY). The industry factor, case size adjustment, and annual trend used for the trend factor are found in Table 41 - Vision: Trend and Adjustments.

Vision Rider Claim Cost PEPY

$$
=[\text { Preliminary Claims Cost }] \times[\text { Industry Factor }] \times[\text { Case Size Adj }] \times[\text { Trend Factor }]
$$

4. Divide the vision rider claim cost PEPY by 12 and by the ratio of members to employees to calculate the vision rider claim cost PMPM.

### 4.2 Health Management Program Savings

Using the values in Table 24 - Health Management Program Savings, calculate the expected claim cost savings for applicable health management programs.

- To calculate expected savings for Your Health First, multiply the decrement in the table by the sum of the blended medical community rate from Step 3.1.1 and the rider claim cost (before demographic and industry factors are applied). Then multiply by the applied industry load from Step 3.3 and the applied demographic factor from Step 3.4.
- To calculate expected savings for Healthy Pregnancies, Healthy Babies and Comprehensive Oncology, trend the PMPM dollar amounts in the table using the area-specific trend factor from Step 2.7, and then multiply by the applied industry load from Step 3.3 and the applied demographic factor from Step 3.4.
- To calculate expected savings for Health Advisor and Personal Health Team, use the PEPM dollar amounts in the table.

### 4.3 Mental Health/Substance Use Disorders

Determine the MH/SUD claim cost. See Appendix E: Mental Health/Substance Use Disorders for rates, trend, and adjustments. Note that the MH/SUD cost calculation uses an MH/SUD-specific trend and that the base claim cost varies within the given range based on plan deductible, copays, and coinsurance.

MH/SUD is ordinarily a capitated product but can be covered as fee-for-service (FFS). If it's covered as FFS, apply the FFS adjustment, otherwise apply only trend to the MH/SUD base claim cost.

$$
\text { MH/SUD Claim Cost }=[\text { MH/SUD Base Claim Cost }] \times[1+\text { Trend }] \times[1+\text { FFS Adjustment }]
$$

### 4.4 Medicare Coordination of Benefits

Rates for post-65 Medicare-eligible retirees are adjusted to reflect the coordination of benefits (COB) with Medicare.

The Medicare COB adjustment is based on the percentage of Medicare-eligible members in the population being rated, the age, sex, and geographic location of the membership, the coordination of benefits method being applied, the underlying medical product type, and the plan deductible, coinsurance, copay, OOP maximum, and other cost-sharing.

## 5 Aggregate Medical Claim Costs

Sum the following to calculate the total medical claim cost for the individual:

- The base medical community rate by class from Step 3.5.
- The total rider claim cost from Step 4.1.
- The claim cost savings from health management programs from Step 4.2.
- The MH/SUD claim cost from Step 4.3.

Combine the individual claim costs for the entire census to determine the aggregate medical claim cost (on a PMPM basis):

$$
\text { Aggregate Medical Claim Cost }=\frac{\text { Sum of Individual Claim Costs }}{\text { Total Members }}
$$

## Pharmacy Manual Rating Formulas

Use this section to calculate expected pharmacy claim costs.
The following formulas detail the pharmacy claim cost calculation process. The specific steps are applied to each pharmacy cost category, except as specifically noted. There are no separate provisions made for OON pharmacy benefits. All benefits are assumed to be IN. Claim costs for each individual life are calculated separately and the results are aggregated. Where noted, a separate set of assumptions or calculations are used for cases run on the FACETS platform.

## 6 Pharmacy Rating Step-by-Step

### 6.1 Extract the Average Wholesale Price (AWP) per Script

Extract the AWP per script by cost category for both retail and mail order based on the formulary type (Standard, Value, Performance, Advantage, or Generics Only). All formularies are open. Separate assumptions exist for the FACETS platform. The AWP per script assumptions are found in the following tables:

- Table 42 - Retail AWP per Script Assumptions
- Table 43 - Mail Order AWP per Script Assumptions
- Table 69 - FACETS Retail AWP per Script Assumptions
- Table 70 - FACETS Mail Order AWP per Script Assumptions

### 6.2 Apply the Discount

Discounts are applied to the AWP per script calculated in Step 6.1 based on retail pharmacy network, funding type/product (HMO, non-HMO, or experience rated) and employer size. Please note that separate assumptions exist for the FACETS platform, which vary only by pricing package. The discount assumptions are found in the following tables:

- Table 46 - Retail Discounts and Dispensing Fees (National Network)
- Table 47 - Retail Discounts and Dispensing Fees (National Network without CVS)
- Table 48 - Retail Discounts and Dispensing Fees (National Network without Walgreens)
- Table 49 - Retail Discounts and Dispensing Fees (National Network without CVS \& Walgreens)
- Table 73 - FACETS Retail Discounts and Dispensing Fees
- Table 74 - FACETS Mail Order Discounts and Dispensing Fees

The discount assumptions vary by drug source (retail or mail order) and drug type (generic, brand, or specialty). Discounts also vary by calendar year, so discount assumptions are averaged for policy years that cross multiple calendar years:

## Average Discount

$=(2014$ Calendar Year Discount $\times \%$ of Policy Year in 2014)

+ (2015 Calendar Year Discount $\times \%$ of Policy Year in 2015)
+ (2016 Calendar Year Discount $\times \%$ of Policy Year in 2016)
$+(2017$ Calendar Year Discount $\times \%$ of Policy Year in 2017)
In addition, separate discounts may apply for 90 -day retail scripts. If the 90 -day retail option is selected, retail discounts are further adjusted:

Adjusted Retail Average Discount
$=30$-Day Retail Average Discount $\times$ ( $1-\%$ of Retail from 90-Day)
+90 -Day Retail Average Discount $\times \%$ of Retail from 90-Day
where
\% of Retail from 90-Day

$$
\begin{aligned}
& =[(\text { Retail Script Count } \times 30-\text { Day Retail Shift to } 90-\text { Day Retail }) \\
& +(\text { Mail Order Script Count } \times \text { Mail Order Shift to } 90 \text {-Day Retail } \times \text { Mail Order Multiplier })] \\
& \div \text { Retail Script Count }
\end{aligned}
$$

The 90-day retail shift assumptions and mail order multiplier are found in the following tables:

- Table 54 - Shift Assumptions for Plans with 90-Day Retail
- Table 55 - Mail Order Multiplier Assumption

If a product is selected where multiple drug types are included in a particular tier, a blended discount must be calculated. The following example describes how a blended discount would be calculated if nonpreventive generics and preferred brand drugs were in the same tier:

Blended Discount for Tier with Non-Preventive Generics and Preferred Brands
$=[($ Non-Preventive Generic Script Count $\times$ Non-Preventive Generic AWP per Script
$\times$ Generic Discount)

+ (Preferred Brand Script Count $\times$ Preferred Brand AWP per Script $\times$ Brand Discount)]
$\div[($ Non-Preventive Generic Script Count $\times$ Non-Preventive Generic AWP per Script)
+ (Preferred Brand Script Count $\times$ Preferred Brand AWP per Script)]
Once the discounts are determined, apply them to AWP per script calculated in Step 6.1:
Step 6.2 Discounted AWP per Script $=$ Step 6.1 AWP per Script $\times(1-$ Discount $)$

### 6.3 Calculate Gross Cost per Script

Dispensing fees are added to the discounted AWP per script calculated in Step 6.2 based on retail pharmacy network, funding type/product (HMO, non-HMO, or experience rated) and employer size. Separate assumptions exist for the FACETS platform, which vary only by pricing package. The dispensing fee assumptions are found in the following tables:

- Table 46 - Retail Discounts and Dispensing Fees (National Network)
- Table 47 - Retail Discounts and Dispensing Fees (National Network without CVS)
- Table 48 - Retail Discounts and Dispensing Fees (National Network without Walgreens)
- Table 49 - Retail Discounts and Dispensing Fees (National Network without CVS \& Walgreens)
- Table 73 - FACETS Retail Discounts and Dispensing Fees
- Table 74 - FACETS Mail Order Discounts and Dispensing Fees

The dispensing fee assumptions vary by drug source (retail or mail order) and drug type (generic, brand, or specialty). Dispensing fees also vary by calendar year, so dispensing fee assumptions are averaged for policy years that cross multiple calendar years:

Average Dispensing Fee
$=(2014$ Calendar Year Dispensing Fee $\times \%$ of Policy Year in 2014)

+ (2015 Calendar Year Dispensing Fee $\times \%$ of Policy Year in 2015)
+ (2016 Calendar Year Dispensing Fee $\times \%$ of Policy Year in 2016)
$+(2017$ Calendar Year Dispensing Fee $\times \%$ of Policy Year in 2017)
In addition, separate dispensing fees apply for 90-day retail scripts. If the 90-day retail option is selected, retail dispensing fees are further adjusted:

Adjusted Retail Average Dispensing Fee
$=30$-Day Retail Average Dispensing Fee $\times$ ( $1-\%$ of Retail from 90-Day)

+ 90-Day Retail Average Dispensing Fee $\times \%$ of Retail from 90-Day
where
\% of Retail from 90-Day
$=[($ Retail Script Count $\times 30-$ Day Retail Shift to $90-$ Day Retail $)$
+ (Mail Order Script Count $\times$ Mail Order Shift to 90 -Day Retail $\times$ Mail Order Multiplier) $]$
$\div$ Retail Script Count
The 90-day retail shift assumptions and mail order multiplier are found in the following tables:
- Table 54 - Shift Assumptions for Plans with 90-Day Retail
- Table 55 - Mail Order Multiplier Assumption

Sales tax is not included in the gross cost per script calculation because of insignificance, so once the dispensing fees are determined, add them to the discounted AWP per script calculated in Step 6.2:

Step 6.3 Gross Cost per Script $=$ Step 6.2 Discounted AWP per Script + Dispensing Fee per Script

### 6.4 Calculate and Apply the Cost Trend Factor

The gross cost per script calculated in Step 6.3 was developed using assumptions from the base claim period. To establish expected costs for the policy period, the gross cost per script must be trended forward from the midpoint of the base claim period to the midpoint of the policy period. Area-specific trends should be used, if applicable, to determine the unit cost trend factor. Otherwise, the national trend should be used. Unit cost trend assumptions are found in the following table:

- Table 57 - Pharmacy: Cost Trend

Determine the number of days from the midpoint of the base claim period to the midpoint of the policy period ("trend days"). The base claim period midpoint is estimated as 182.5 days after the base claim effective date. The policy period midpoint is the average of the policy effective date and the policy end date.

Each year following the base claim period midpoint is a trend year and has an associated unit cost trend factor. Determine the number of trend days that fall into each trend year and divide by the total days in the trend year to arrive at the portion of each trend year applicable to the case being rated ("exposure percentage"). Now the adjusted unit cost trend factor can be calculated for each trend year:

Adjusted Unit Cost Trend Factor $=(1+\text { Trend Year Unit Cost Trend Factor })^{\text {Exposure Percentage }}$
The final unit cost trend factor is the product of the adjusted unit cost trend factors for each trend year. The following example outlines the unit cost trend factor calculation using national trend values:
$a=$ Base claim effective date $=1 / 1 / 2014$
$b=$ Policy effective date $=4 / 1 / 2016$
c $=$ Policy end date $=3 / 31 / 2017$
d = Annual cost trend factor for 2015/2014 = 10.34\%
e = Annual cost trend factor for 2016/2015 = 12.34\%
$\mathrm{f}=$ Annual cost trend factor for 2017/2016 = 12.34\%
$\mathrm{g}=$ Base claim period midpoint $=\mathrm{a}+182.5$ days $=7 / 2 / 2014$
$h=$ Policy period midpoint $=(b+c) \div 2=9 / 30 / 2016$
$\mathrm{i}=$ Total trend days $=\mathrm{g}-\mathrm{f}=820$

$$
\begin{aligned}
& \mathrm{j}=\text { Trend days from } 2014 \text { to } 2015=363.5 \\
& \mathrm{k}=\text { Trend days from } 2015 \text { to } 2016=366 \\
& \mathrm{I}=\text { Trend days from } 2016 \text { to } 2017=91.5
\end{aligned}
$$

Final Unit Cost Trend Factor $=(1+d)^{\frac{j}{365}} \times(1+e)^{\frac{k}{366}} \times(1+f)^{\frac{l}{365}}$

$$
=1.1034^{0.996} \times 1.234^{1} \times 1.234^{0.25}=1.276
$$

Once the final unit cost trend factor is determined, apply it to the gross cost per script calculated in Step 6.3:

Step 6.4 Trended Gross Cost per Script $=$ Step 6.3 Gross Cost per Script $\times$ Final Unit Cost Trend Factor

### 6.5 Extract the Annual Script Counts Per Member

Extract the annual script counts per member (script count per member per year [PMPY]) by cost category for both retail and mail order based on the formulary type (Standard, Value, Performance, Advantage, or Generics Only). Pull in script counts for optional cost categories, such as lifestyle drugs, as needed. If an optional cost category has not been selected, set the script count to zero. Please note that separate assumptions exist for the FACETS platform. The script count assumptions are found in the following tables:

- Table 44 - Retail Script Count PMPY Assumptions
- Table 45 - Mail Order Script Count PMPY Assumptions
- Table 71 - FACETS Retail Script Count PMPY Assumptions
- Table 72 - FACETS Mail Order Script Count PMPY Assumptions

Script counts are adjusted when the mandatory generic program is selected:
Adjusted Generic Script Count
= Generic Script Count

+ (Non-Preferred Brand Multi-Source Script Count $\times$ Mandatory Generic Shift Factor)
Adjusted Non-Preferred Brand Multi-Source Script Count
$=$ Non-Preferred Brand Multi-Source Script Count $\times$ ( $1-$ Mandatory Generic Shift Factor)
Scripts that are shifted from the non-preferred brand multi-source category to the generic category are assumed to be proportionately distributed between the preventative generic and non-preventative generic buckets. If specialty drugs are rated on a $4^{\text {th }}$ tier, no specialty drug utilization is expected to shift to the generic category. The mandatory generic shift factor is found in the following table:
- Table 56 - Mandatory Generic Shift Factor

Script counts are also adjusted if the 90-day retail option is selected:
Adjusted Retail Script Count
$=$ Retail Script Count + (Mail Order Script Count $\times$ Mail Order Shift to 90-Day Retail
$\times$ Mail Order Multiplier)
Adjusted Mail Order Script Count $=$ Mail Order Script Count $\times(1-$ Mail Order Shift to 90 -Day Retail)
If both the mandatory generic program and 90 -day retail option are selected, script counts are first adjusted for the mandatory generic program and then the 90 -day retail option.

### 6.6 Calculate and Apply Utilization Trend Factor

The script counts calculated in Step 6.5 were developed using assumptions from the base claim period. To establish expected costs for the policy period, the script counts must be trended forward from the midpoint of the base claim period to the midpoint of the policy period. Area-specific trends should be used, if applicable, to determine the unit cost trend factor. Otherwise, the national trend should be used. Utilization trend assumptions are found in the following table:

- Table 58 - Pharmacy: Utilization Trend

Calculate the utilization trend factor by re-running Step 6.4 with the utilization trend factors. Once the final utilization trend factor is determined, apply it to the script counts calculated in Step 6.5:

Step 6.6 Trended Script Count PMPY $=$ Step 6.5 Script Count PMPY $\times$ Final Utilization Trend Factor

### 6.7 Calculate Gross Trended PMPM

Calculate the gross trended cost PMPM by multiplying the trended script count by gross trended cost per script and dividing by 12 (since script counts are PMPY):

Step 6.7 Gross Trended PMPM
$=\frac{\text { Step 6.4 Trended Gross Cost per Script } \times \text { Step 6.6 Trended Script Count PMPY }}{12}$

### 6.8 Calculate Gross Area-Adjusted PMPM

The gross trended PMPM is adjusted for cost differences by area. The area factors are found in the following table:

- Table 59 - Pharmacy: Area Factors

Extract the area factor based on the site and funding type/product (HMO, non-HMO, experience rated NWK, experience rated non-NWK) being rated and apply it to the gross trended cost PMPM calculated in Step 6.7:

Step 6.8 Gross Area-Adjusted PMPM $=$ Step 6.7 Gross Trended PMPM $\times$ Pharmacy Area Factor

### 6.9 Calculate Regular Member Cost Share Using Pharmacy CPD

The pharmacy CPD is composed of the following tables:

- Table 60 - Pharmacy: CPD (\% Preventive)
- Table 61 - Pharmacy: CPD (Cost per Script)
- Table 62 - Pharmacy: CPD (Scripts PMPY)

Unless otherwise specified, weighted averages mentioned in Step 6.9 are calculated using the probabilities in the pharmacy CPD.

Begin the member cost share calculation by extracting the copays, coinsurance, deductible, applicable deductible waivers, OOP maximum, and plan maximum for the plan design being rated.

### 6.9.1 Adjust CPD to Appropriate Rate Level

Scale the cost per script and script counts PMPY for each row and tier of the pharmacy CPD to reflect the expected cost and utilization derived in Steps 6.1 through 6.6:

Step 6.9.1 Scaled Cost per Script $=$ Original CPD Cost per Script $\times$ Cost per Script Scalar
Step 6.9.1 Scaled Script Count PMPY $=$ Original CPD Script Count PMPY $\times$ Script Count PMPY Scalar
where
Cost per Script Scalar $=$ Step $6.4 \div$ Original CPD Weighted Average Cost per Script
Script Count PMPY Scalar $=$ Step $6.6 \div$ Original CPD Weighted Average Script Count PMPY

### 6.9.2 Calculate Annual Cost

Determine the annual cost for each row and tier using the scaled pharmacy CPD from Step 6.9.1. In addition, the tiers should be further split into preventive and non-preventive using Table 60 - Pharmacy: CPD (\% Preventive):

Step 6.9.2 Preventive Gross Trended PMPY
$=$ Step 6.9.1 Scaled Cost per Script $\times$ Step 6.9.1 Scaled Script Count PMPY $\times \%$ Preventive
Step 6.9.2 Non-Preventive Gross Trended PMPY
$=$ Step 6.9.1 Scaled Cost per Script $\times$ Step 6.9.1 Scaled Script Count PMPY $\times(1-\%$ Preventive $)$
If specialty drugs are rated on a $4^{\text {th }}$ tier, all specialty utilization is assumed to be non-preventative.
In addition, calculate the total annual cost for each row as the sum of the preventive and non-preventive gross trended PMPY values:

Step 6.9.2 Total Annual Cost
$=$ Sum(Step 6.9.2 Preventive Gross Trended PMPY, Step 6.9.2 Non-Preventive Gross Trended PMPY)
Finally, calculate the estimated annual cost across all rows and tiers as the weighted average of the Step 6.9.2 Total Annual Cost:

Step 6.9.2 Estimated Annual Cost $=$ Sum(Step 6.9.2 Total Annual Cost $\times$ Probability $)$

### 6.9.3 Calculate Deductible and Deductible Waiver Impacts

Compare the applicable annual cost for each row to the deductible to see how much of the deductible applies for each row. If the deductible is waived for preventive drugs or certain tiers, do not include those costs in the applicable annual cost for each row:

Step 6.9.3 Deductible Applied $=$ Min[Applicable Annual Cost, Deductible]
where
Applicable Annual Cost $=$ Step 6.9.2 Total Annual Cost - Sum(Waived Step 6.9.2 Gross Trended PMPY)
For plans with a combined deductible, no deductible is assumed. Instead the impact of the combined deductible is calculated using the combined medical and pharmacy CPD.

### 6.9.4 Calculate Percentage of Cost Remaining after Applying Deductible

Calculate the percentage of total annual cost remaining after applying the deductible for each cell of the CPD:

Step 6.9.4 Percentage of Cost Remaining $=1-\frac{\text { Step 6.9.3 Deductible Applied }}{\text { Step 6.9.2 Total Annual Cost }}$

### 6.9.5 Calculate the effective value of copays and coinsurance

Define the effective copay as the member cost per script after copays, coinsurance, maximum copays, minimum copays and the cost per script are considered.

For tiers with copays:
Step 6.9.5 effective copay
$=$ Min[Copay, step 6.9.1 Scaled Cost per Script]
For tiers with coinsurance:

Step 6.9.5 effective copay
= Min\{ Max[ Member Coinsurance x step 6.9.1 Scaled Cost per Script, minimum copay] , maximum copay

### 6.9.6 Adjust Copays for Costs Covered by the Deductible

For each cell of the CPD, multiply the effective value of copays by the portion of costs remaining after the deductible has been applied

Step 6.9.6 Member Copay Value $=$ Step 6.9.4 Percentage of Cost Remaining x Step 6.9.5 Effective Copay

### 6.9.7 Calculate Annual Member Cost Share

Determine the annual member cost share for each row due to copays, coinsurance, and deductible:
Step 6.9.7 Annual Member Cost Share
$=$ Sum(Step 6.9.6 Member Copay Value $\times$ Step 6.9.1 Scaled Script Count PMPY)

+ Step 6.9.3 Deductible Applied
6.9.8 Adjust for Out-of-Pocket (0OP) Maximum

Adjust the annual member cost share calculated in Step 6.9.7 for each row to reflect the impact of an OOP maximum, if applicable:

Step 6.9.8 Member Cost Share after 00P Max $=$ Min[OOP Max, Step 6.9.7 Annual Member Cost Share]
For plans with a combined OOP maximum, no OOP maximum is assumed. Instead the impact of the combined OOP maximum is calculated using the combined medical and pharmacy CPD.

### 6.9.9 Adjust for Plan Maximum

Adjust the member cost share after OOP max calculated in Step 6.9.8 for each row to reflect the impact of a plan maximum, if applicable:

Step 6.9.9 Member Cost Share after 00P Max \& Plan Max

### 6.9.10 Calculate Regular Member Cost Share

Determine the regular member cost share as the ratio of the estimated annual member cost to the estimated total cost:

Step 6.9.10 Regular Member Cost Share
$=\frac{\text { Weighted Average(Step 6.9.9 Member Cost Share after 00P Max \& Plan Max) }}{\text { Step 6.9.2 Estimated Annual Cost }}$

### 6.9.11 Calculate Effective Member Cost Share

For plans with a combined deductible and/or combined OOP maximum, the regular member cost share calculated in Step 6.9.10 is used in Step 2.5 to determine the effective member cost share for the pharmacy benefit.

For all other plans, the effective member cost share is set equal to the regular member cost share calculated in Step 6.9.10.

### 6.10 Calculate Adjusted Cost Share

Optional cost categories, such as lifestyle drugs, may be moved to the fourth tier. For optional cost categories moved to the fourth tier, increase the effective member cost share calculated in Step 6.9.11 by $5 \%$ to estimate the increased cost sharing in the fourth tier. Otherwise, use the effective member cost share.

Moving an optional cost category to the fourth tier should always increase the cost share for that class, but it will have minimal impact to overall rates because of low utilization levels.

Step 6.10 Adjusted Member Cost Share $=$ Step 6.9.11 Effective Member Cost Share $\times 1.05$
Please note that this step does not apply to the FACETS platform.

### 6.11 Calculate Net Pharmacy PMPM

Now that member cost share has been calculated, determine the remaining pharmacy plan cost (or net pharmacy PMPM).

For all standard cost categories and any optional cost categories that have not been moved to the fourth tier, apply the effective member cost share from Step 6.9.11:

Step 6.11 Net Pharmacy PMPM

$$
=\text { Step 6.8 Gross Area-Adjusted PMPM } \times(1-\text { Step 6.9.11 Effective Member Cost Share })
$$

For optional cost categories that have been moved to the fourth tier, apply the adjusted member cost share from Step 6.10:

Step 6.11 Net Pharmacy PMPM

$$
\text { = Step 6.8 Gross Area-Adjusted PMPM } \times(1-\text { Step 6.10 Adjusted Member Cost Share })
$$

### 6.12 Calculate Aggregate Metrics

Many of the following summary metrics are used for analysis purposes and visibility, but do not impact the final rate. Metrics that do impact the final rate will be referenced in later steps.

### 6.12.1 Average AWP per Script

Calculate the average AWP per script across all cost categories as a weighted average using the trended script counts from Step 6.6 as the weights:

Step 6.12.1 Average AWP per Script $=\frac{\text { Sum(Step 6.1 AWP per Script } \times \text { Step 6.6 Trended Script Count PMPY) }}{\text { Sum(Step 6.6 Trended Script Count PMPY) }}$

### 6.12.2 Average Discounted AWP per Script

Calculate the average discounted AWP per script using the method for calculating the average AWP per script in Step 6.12.1.

### 6.12.3 Average Dispensing Fee per Script

Calculate the average dispensing fee per script using the method for calculating the average AWP per script in Step 6.12.1.

### 6.12.4 Average Discount

Derive the average discount using the average AWP per script from Step 6.12.1 and the average discounted AWP per script from Step 6.12.2:

Step 6.12.4 Average Discount $=1-\frac{\text { Step 6.12.2 Average Discounted AWP per Script }}{\text { Step 6.12.1 Average AWP per Script }}$

### 6.12.5 Average Cost Trend Factor, Utilization Trend Factor, and Area Factor

The trend factors and area factor are the same for all cost categories, so their average is the same as the individual factors.

### 6.12.6 Average Gross Cost per Script and Trended Gross Cost per Script

The average gross cost per script and trended gross cost per script are calculated using the method for calculating the individual cost categories:

Step 6.12.6 Average Gross Cost per Script
= Step 6.12.2 Average Discounted AWP per Script + Step 6.12.3 Average Dispensing Fee per Script
Step 6.12.6 Average Trended Gross Cost per Script
$=$ Step 6.12.6 Average Gross Cost per Script $\times$ Step 6.12.5 Average Cost Trend Factor
6.12.7 Total Script Counts, Trended Script Counts, Gross Trended PMPM, Gross Area-Adjusted PMPM, and Net Pharmacy PMPM

Calculate the total for each metric as the sum across all cost categories for the respective metric.

### 6.12.8 Average Adjusted Cost Share

Derive the average adjusted member cost share using the total net pharmacy rate and total gross areaadjusted PMPM from Step 6.12.7:

Step 6.12.8 Average Adjusted Member Cost Share $=1-\frac{\text { Step 6.12.7 Total Net Pharmacy PMPM }}{\text { Step 6.12.7 Total Gross Area-Adjusted PMPM }}$
All calculations going forward are done on an aggregate basis only, so calculations are no longer split into cost categories.

### 6.13 Apply the Clinical Program Factor

Calculate the clinical program factor as the sum of the individual clinical programs selected. The applicable factors for various clinical programs are found in the following tables:

- Table 64 - Pharmacy: Clinical Management Programs
- Table 63 - Global Step Therapy Program

The global step therapy program varies by formulary type and the level of intervention. If no intervention is desired for a particular drug therapy category, do not include a factor for that category when calculating the clinical program factor.

Apply the clinical program factor to the net pharmacy rate from Step 6.12.7:
Step 6.13 Clinical-Adjusted Net Pharmacy PMPM
$=$ Step 6.12.7 Net Pharmacy PMPM $\times$ ( $1-$ Clinical Program Factor $)$

### 6.14 Apply the Pharmacy Demographic Factor

Extract the pharmacy demographic factor from Table 65 - Pharmacy: Demographic Factors based on the age, gender, and status (employee, spouse, or child) of the individual being rated. Unisex factors exist if gender is not a permitted rating variable. Multiply the pharmacy demographic factor by the demographic aging adjustment calculated in Step 3.4 to calculate the adjusted pharmacy demographic factor.

Apply the adjusted pharmacy demographic factor to the clinical-adjusted net pharmacy Step 6.13:
Step 6.14 Clinical/Demo-Adjusted Net Pharmacy PMPM
$=$ Step 6.13 Clinical-Adjusted PMPM $\times$ Adjusted Pharmacy Demographic Factor

### 6.15 Apply the Industry Factor

Extract the industry factor from Table 20 - Industry Load and apply it to the clinical- and demographicadjusted net pharmacy PMPM calculated in Step 6.14:

Step 6.15 Clinical/Demo/Industry-Adjusted Net Pharmacy PMPM
$=$ Step 6.14 Clinical/Demo-Adjusted PMPM $\times$ Industry Factor

### 6.16 Apply the Pharmacy Mandates Adjustment

Extract the mandate factor from Table 66 - Pharmacy: Mandate Factors, if applicable, based on the state being rated. Apply it to the clinical-, demographic-, and industry-adjusted net pharmacy PMPM calculated in Step 6.15:

Step 6.16 Clinical/Demo/Industry/Mandate-Adjusted Net Pharmacy PMPM
$=$ Step 6.15 Clinical/Demo/Industry-Adjusted Net Pharmacy PMPM $\times(1+$ Mandate Adjustment $)$

### 6.17 Apply Utilization Dampening Factor

Extract the utilization dampening factor from Table 67 - Pharmacy: Utilization Dampening Factors based on the average adjusted member cost share calculated in Step 6.12.8. Apply it to the clinical-, demographic-, industry-, and mandate-adjusted net pharmacy PMPM calculated in Step 6.16 to determine the total benefit pharmacy community rate by class (CRC):

Step 6.17 Total Benefit Pharmacy CRC
= Step 6.16 Clinical/Demo/Industry/Mandate-Adjusted Net Pharmacy PMPM
$\times$ Utilization Dampening Factor

### 6.18 Apply Miscellaneous Pharmacy Adjustments

The following multiplicative adjustments are applied to the total benefit pharmacy CRC calculated in Step 6.17 to arrive at the adjusted total benefit pharmacy CRC:

Step 6.18 Adjusted Total Benefit Pharmacy CRC
$=$ Step 6.17 Total Benefit Pharmacy CRC $\times(1+$ Step 6.18.1 Generic Requirement Adjustment $)$
$\times(1+$ Step 6.18.2 Mail Order Deductible Waiver Adjustment $)$
$\times(1+$ Step 6.18.3 Women's Preventive Health Adjustment $)$
$\times(1+$ Step 6.18.34 Mail Order Specialty Drug 30 Day Limit $)$
$\times(1+$ Step 6.18.35 Mandatory Mail Load $)$

### 6.18.1 Generic Requirement Adjustment

Plan designs that do not encourage generic use through a mandatory generic or dispense-as-written program receive a $1 \%$ load. All other plan designs do not receive a load.

### 6.18.2 Mail Order Deductible Waiver Adjustment

Plan designs with a deductible that waive that deductible for mail order prescriptions receive a $5 \%$ load to estimate the increased cost due to the decreased member cost sharing. All other plan designs do not receive a load.

### 6.18.3 Women's Preventive Health Adjustment

Providing coverage of certain drugs and devices without cost sharing to address the Patient Protection and Affordable Care Act Women's Preventive Health Services requirement is reflected as a load.
Combined deductible/OOP plans receive a $2.8 \%$ load, while all other plans receive a $1 \%$ load.

### 6.18.4 Mail Order Specialty Drug 30 Day Limit

Limiting specialty drug fills to 30 day supplies reduces waste. Plans that elect this feature receive a $0.4 \%$ reduction while plans that choose not to elect this feature receive no adjustment.

### 6.18.5 Mandatory Mail for Maintenance Drugs Load

When clients require customers to obtain their maintenance medications via Cigna's mail order pharmacy costs increase do to overhead expense costs associated with filling a script at mail. Plans that have mandatory mail receive a $1 \%$ load. Plans that incentivize mail order utilization receive a $0.5 \%$ load.

### 6.19 Determine Final Pharmacy CRC and Pharmacy CR

Similar to medical, pharmacy rates receive community rate adjustments, but not all of the community rate adjustments from Step 2.8.1 apply to pharmacy. Only the following factors apply:

- Multiple Offering Load

The multiple offering load applied to the pharmacy rate is the sum of the medical factor from Step 2.8.1 and the additional pharmacy load from Table 68 - Pharmacy: Multiple Offering Load, if applicable, based on the site being rated and whether there is more than one product offering being considered.

- Deductible Accumulation Adjustment
- Open Access Load
- Consumerism Adjustment

The product of these adjustments becomes the pharmacy community rate load, which is applied to the adjusted total benefit pharmacy CRC calculated in Step 6.18:

Step 6.19 Final Pharmacy CRC
$=$ Step 6.18 Adjusted Total Benefit Pharmacy CRC $\times$ Pharmacy Community Rate Load
The demographic and industry factors are removed to determine the pharmacy community rate (CR):
Step 6.19 Final Pharmacy CR $=\frac{\text { Step 6.19 Final Pharmacy CRC }}{\text { 6.14 Demographic Factor } \times \text { Step 6.15 Industry Factor }}$

### 6.20 Aggregate Individual Claim Costs

Combine the individual PMPM pharmacy claim costs for the entire census to determine the aggregate pharmacy claim cost PMPM:

Step 6.20 Aggregate Pharmacy CRC $=\frac{$|  Sum of Step 6.19 Final Pharmacy CRC for all  |
| :---: |
|  individuals  |}{Sum of the number of individuals}

Sum of Step 6.19 Final Pharmacy CR for all
Step 6.20 Aggregate Pharmacy CR $=$ individuals
Sum of the number of individuals

## Final Rate

## 7 Calculate Final Rate

Use the following to combine medical and pharmacy rates and calculate the final PMPM rate. If the pharmacy benefit is carved out, it will not be included in the calculation.

$$
\text { Final PMPM Rate }=\frac{[\text { Step } 5 \text { Aggregate Medical Claim Cost }]+[\text { Step 6.20 Aggregate Pharmacy CRC }]}{[\text { Applied Loss Ratio }]}
$$

Using the demographic assumptions from Step 1, determine the number of members per subscriber and calculate the per employee per month (PEPM) rate:

Final PEPM Rate $=[$ Final PMPM Rate $] \times[$ Number of Members per Subscriber $]$

## Appendix A: Experience Rating Formula for Medical Products

Blended claims are a weighted average of the group's official experience and the manually rated claims.
The group's official experience is calculated as fee-for-service paid claims, adjusted for large claims and capitation, then multiplied by a trend factor. The claims are then adjusted for any changes in liability. This experience could include Cigna experience on the particular group or a portion of the group or prior carrier experience.

The manually rated claims are calculated according to the formulas and tables filed and approved with the state.

The weights used to blend the claims are based on the credibility of the group. The blended claims may be adjusted for underwriting discretion. A retention charge is then added for administrative expenses (inclusive of network access fees), taxes, commissions, and profit. The premium is then adjusted for the pooling charge where applicable.

## Appendix B: Cigna Care Network (CCN) Tiered Benefits

A manual rate will be developed for the underlying plan, consistent with this filing's base methodology and reflecting the tier 1 level of cost-sharing for SCP/PCP office visits.

The rate adjustment will equal [1 - Savings \%], according to the following formula (and the formula components are defined below):

Savings \%

$$
\begin{aligned}
& =[1-\text { OON Percent }] \\
& \times[\text { Benefit Save } \times \text { Percent Non-CCN Dollars }+ \text { Benefit Save } \times \text { Percent Non-Tiered Dollars }]
\end{aligned}
$$

Notes:

- If a client decides to administer the tier 1 benefit to non-tiered physicians, raw benefit save is not multiplied by the percentage of members in the non-tiered group.
- PCP and SCP savings are calculated separately and then combined for a total impact to the manual rate.

Definitions:

- Benefit Save - Benefit savings ran through the regular methodology as if the whole group was making the copay or coinsurance change from tier 1 to tier 2 benefits.
- Percent Non-CCN Dollars - Percentage of total physician dollars at a market level that represent categories of doctors where we do define CCN vs. non CCN but the doctors did not earn the designation.
- Percent Non-Tiered Dollars - Percentage of total physician dollars at a market level that represent categories of doctors where we do not designate CCN vs. non CCN.
- OON Percent - Developed for the underlying plan, consistent with this filing's base methodology and reflecting the Tier 1 benefit level. Calculated as OON Utilization in Step 3.1.2.

## Appendix C: General Medical Tables

Table 1 - Medical Base Claims

|  | Major Service Categories (dollars PMPM) |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Inpatient <br> (IP) | Outpatient (OP) | Primary Care Physician (PCP) | Emergency <br> Room (ER) | Specialty Care Physician (SCP) | Other | Preventive Care |
| Experience-Rated In-Network | 109.76 | 113.30 | 21.24 | 31.87 | 46.03 | 14.16 | 16.28 |
| Experience-Rated Out-of-Network | 159.15 | 164.28 | 30.80 | 46.21 | 66.74 | 20.53 | 23.60 |

Table 2 - MSC Weighting by SCC

|  | Major Service Categories |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Sub-Cost Categories | Inpatient (Hospital) | Outpatient (Hospital) | ER | PCP | SCP | Other |
| Facility | 83.5\% | 55.0\% | 100.0\% | 0.0\% | 0.0\% | 100.0\% |
| Professional | 16.5\% | 17.0\% | 0.0\% | 90.0\% | 81.0\% | 0.0\% |
| Lab | 0.0\% | 6.8\% | 0.0\% | 8.0\% | 3.6\% | 0.0\% |
| Radiology | 0.0\% | 10.2\% | 0.0\% | 2.0\% | 5.4\% | 0.0\% |
| Advanced Radiology (ARI) | 0.0\% | 11.0\% | 0.0\% | 0.0\% | 10.0\% | 0.0\% |

Table 3 - Preventive Care Child Age Adjustment

| Elected Child Age | Portion of Preventive Care Base Claim Cost |
| :--- | :--- |
| $\leq 2$ | 0.16 |
| 3 to 64 | Linearly interpolate between 0.16 at 2 and 1.0 at 65 |
| $\geq 65$ | 1.0 |

Table 4 - National Medical Trend

|  | $\mathbf{2 0 1 5 / 2 0 1 4}$ | $\mathbf{2 0 1 6 + / 2 0 1 5}$ |
| :--- | :---: | :---: |
| IN Trend | $8.5 \%$ | $8.5 \%$ |
| OON Trend | $8.5 \%$ | $8.5 \%$ |

Table 5 - National Utilization Rates by MSC

|  | Major Service Categories |  |  |  |  |  |  |

Table 10 - Average Visit Cost

|  | PCP Office Visit | SCP Office Visit | OON Office Visit |
| :--- | :---: | :---: | :---: |
| Average Cost | 110 | 190 | 190 |
| Note: Trend applies to these values |  |  |  |
| If PCP and SCP have a combined limit, weight these values 45\% PCP and 55\% SCP |  |  |  |

Table 11 - Preventive Care Cost-Share Weighting

| Major Service Category | Weighting |
| :--- | :---: |
| PCP | $75 \%$ |
| SCP | $25 \%$ |

Table 12 - Medical Utilization Dampening

|  | IP | OP | PCP Copay | PCP Ded/Coins | ER | SCP Copay | SCP Ded/Coins | Other |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| A | -2.17 | -1.34 | -0.68 | -0.83 | 0.00 | -0.71 | -2.06 | -1.78 |
| B | 0.12 | 0.21 | 0.11 | 0.37 | 0.00 | 0.15 | 0.57 | 0.30 |
| Applicable MSC | IP | OP | PCP | PCP | ER | SCP | SCP | Other |
|  |  |  |  |  |  |  |  |  |
| C | This factor is equal to [(Total Cost-Share) $\times(-0.16)+(0.011)$ ] and is the same for all MSCs |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |
|  | Indemnity (NY metro) |  |  | Indemnity (NJ) |  | Indemnity (all other areas) |  |  |
| A <br> B <br> Applicable MSC | $\begin{array}{r} -0.10 \\ 0.27 \end{array}$ |  |  | $-0.10$ |  | -0.32 |  |  |
|  |  |  |  | $0.36$ |  | 0.22 |  |  |
|  | These indemnity UD factors apply to the aggregate cost-share |  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |  |  |
| Note: Utilization dampening has a floor of 0.20 . There is a cap of 1.12 on PCP, 1.17 on SCP, and 1.25 on Other. |  |  |  |  |  |  |  |  |

Table 13 - Effective Deductible - Collective Accumulation Adjustment

| Deductible Multiplier | Deductible | Avg. Family Size: 2 | Avg. Family Size: 3 | Avg. Family Size: 4 | Deductible Multiplier | Deductible | Avg. Family Size: 2 | Avg. Family Size: 3 | Avg. Family Size: 4 |

Table 17 - Community Rate Loads

## ER/UC Steerage Adjustment

Using the applicable copay and/or coinsurance per the plan design and the average steerable visit cost below, calculate the average actual visit cost to a member for an ER visit and Urgent Care facility visit. Look up the load on the table based on visit cost differential and the Effective ER deductible from Step 2.4. No load is applied if Urgent Care is subject to the deductible or if the calculated Urgent Care facility visit cost is $\$ 0$.

| Average Steerable visit cost |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| ER | 1000 |  |  |  |  |
| Urgent Care | 160 |  |  |  |  |
|  | Effective ER Deductible |  |  |  |  |
| Visit Cost Difference | 0 | 500 | 1000 |  | 3000 | 6000 |
| 0 | 1.0000 | 0.9995 | 0.9990 | 0.9975 | 0.9970 |
| 100 | 0.9995 | 0.9989 | 0.9984 | 0.9974 | 0.9970 |
| 200 | 0.9990 | 0.9984 | 0.9979 | 0.9973 | 0.9970 |
| 300 | 0.9985 | 0.9980 | 0.9975 | 0.9972 | 0.9970 |
| 400 | 0.9980 | 0.9976 | 0.9972 | 0.9971 | 0.9970 |
| 500 | 0.9975 | 0.9973 | 0.9970 | 0.9970 | 0.9970 |

## Medical Specialty Drugs Steerage Adjustment

The following adjustments apply for plan designs where the deductible applies to medical specialty drugs administered in outpatient facilities, the deductible does not apply to medical specialty drugs administered in either (or both of) the home or at a physician's office, and the member coinsurance for those services is greater than $0 \%$.

|  | Deductible Waiver by Place of Administration |  |  |
| :---: | :---: | :---: | :---: |
|  | Physician's <br> office | Home | Both Home and <br> Physician's Office |
| 0 | 1.0000 | 1.0000 | 1.0000 |
| 1000 | 0.9997 | 0.9999 | 0.9996 |
| 2000 | 0.9994 | 0.9998 | 0.9992 |
| 3000 | 0.9991 | 0.9997 | 0.9988 |
| 4000 | 0.9988 | 0.9996 | 0.9984 |
| 5000 | 0.9985 | 0.9995 | 0.9980 |

## Independent Lab Steerage Adjustment

The following adjustments apply for plan designs where the deductible does not apply to independent lab facility services, the deductible does apply to either (or both of) physician's office lab services or outpatient facility lab services, and the member coinsurance for those services is greater than $0 \%$.

|  | Deductible by Place of Service |  |  |
| :---: | :---: | :---: | :---: |
| Deductible | Outpatient <br> Facility | Physician's <br> Office | Both OP Facility and <br> Physician's Office |
| 0 | 1.0000 | 1.0000 | 1.0000 |
| 1000 | 0.9998 | 0.9998 | 0.9996 |
| 2000 | 0.9996 | 0.9996 | 0.9992 |
| 3000 | 0.9994 | 0.9994 | 0.9988 |
| 4000 | 0.9992 | 0.9992 | 0.9984 |
| 5000 | 0.9990 | 0.9990 | 0.9980 |

Enhanced Non-Par Claims Adjustment
See Table 33 - Enhanced Non-Par. Claims Adjustment and Table 34 Enhanced Non-Par. Claims Adjustment Summary for appropriate loads.

| Rider | Methodology |
| :---: | :---: |
| Bariatric Surgery | 0.7187 for a maximum from $\$ 1$ to $\$ 8000$ <br> 2.2774 for a maximum greater than $\$ 8000$ <br> 2.6114 for unlimited coverage |
| Durable Medical Equipment (DME) | 1.47144 base PMPM |
| Durable Medical Equipment OON Buy Up | IN PMPM multiplied by the POS Load |
| External Prosthetic Appliances (EPA) | 0.2953 base PMPM |
| External Prosthetic Appliances OON Buy Up | IN PMPM multiplied by the POS Load |
| DME and EPA Combined | 1.7665 Base PMPM |
| DME and EPA Combined OON Buy Up | IN PMPM multiplied by the POS Load |
| Routine Foot Disorders Buy Up | 1.0189 for a maximum less than $\$ 1000$ <br> 1.1987 for a maximum $\$ 1000$ or greater |
| Routine Foot Disorders OON Buy Up | IN PMPM multiplied by the POS Load |
| Organ Transplants OON | 0.2397 base PMPM |
| Home Health Care | -1.2467 when annual maximum days are set to zero. Slope of 0.0189 per day. <br> 1.3545 cap on coverage. |
| Infertility Treatment - Buy Up \#1 | 1.2814 base PMPM |
| Infertility Treatment - Buy Up \#1 OON | IN PMPM multiplied by the POS Load |
| Infertility Treatment - Buy Up \#2 | Base Cost PMPM $=5.2897 \times\left[\frac{\text { Max }}{18844.37}\right]^{0.6}$ 10.5794 cap on coverage |
| Infertility Treatment - Buy Up \#2 OON | IN PMPM multiplied by the POS Load |
| Infertility Only | Difference between the cost of Infertility Treatment Buy Up \#2 and Buy Up \#1 |
| Infertility Only OON | IN PMPM multiplied by the POS Load |
| Complex Psych Program Savings | -0.1798 base PMPM |
| TMJ | 0.3716 base PMPM |

| Rider | Methodology |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| Narcotics Therapy Program Savings | -0.1798 base PMPM |  |  |  |
| Alternative Care (Acupuncture, Naturopathy, Massage) | Naturopathy and Acupuncture are available with or without massage at $\$ 300$ or $\$ 600$ limits. <br> 1.5643 - Without massage, $\$ 300$ limit. <br> 2.2835 - Without massage, $\$ 600$ limit <br> 1.8041 - With massage, $\$ 300$ limit <br> 3.3624 - With massage, $\$ 600$ limit |  |  |  |
| Acupuncture | This doesn't apply if an Alternative Care election is made. 0 - Less than 10 visits <br> $0.4695-10$ to 11 visits <br> $0.5634-12$ to 14 visits <br> $0.6690-15$ to 19 visits <br> 0.8451 - For 20 or more visits. |  |  |  |
| Preventive Care OON Exclusion | If OON preventive care is not covered: -0.7500 base PMPM |  |  |  |
| Family Planning Preventive Care Exemption | Apply a factor of 0.96 to the preventive care base rate in Step 2.1. |  |  |  |
| The following therapies riders use curves based on the number of visits. One slope (PMPM per visit) applies up to some number of visits ("Breakpoint") while another slope applies past that number of visits. <br> For example, if Speech Therapy is offered with a 30 day limit (with a limit past the breakpoint), then the final cost would be: $\text { ST PMPM }=[1 \text { st Slope }] \times 20+[2 \text { nd Slope }] \times 10=0.00545 \times 20+0.00136 \times 10=0.123$ <br> If Cardiac and Pulmonary Rehab is included with these benefits, it does not have a pricing impact. |  |  |  |  |
| Therapy | $1^{\text {st }}$ slope | Breakpoint | $2^{\text {nd }}$ slope | Cap |
| Speech Therapy (ST) | 0.00545 | 20 days | 0.00136 | 0.20432 |
| Outpatient Speech, Hearing, and Occupational Therapy (OSHOT) | 0.01090 | 20 days | 0.00272 | 0.40865 |
| Chiropractic Therapy (Chiro) | 0.05449 | 60 days | 0.01453 | 3.70508 |
| Physical Therapy (PT) | 0.10150 | 20 days | 0.02383 | 3.45963 |
| PT and Occupational Therapy (OT) | 0.10695 | 20 days | 0.02519 | 3.63262 |
| PT and OSHOT | 0.11240 | 20 days | 0.02655 | 3.86828 |
| PT, OT, ST, and Chiro | 0.13827 | 30 days | 0.05709 | 7.57336 |
| The following riders are not standardly offered but are frequently requested. If elected, they are multiplicative adjustments applied to total expected medical and pharmacy claims as calculated in Step 5 and Step 6.20. If the coverage is mandated, then the adjustment is already embedded in the rating area factor and does not apply separately. |  |  |  |  |
| Short Term Rehab Coverage for Auti |  |  | 1.001 |  |
| Short Term Rehab Coverage for Dev | tal Delays |  | 1.001 |  |
| Applied Behavioral Analysis Therapy |  |  | 1.004 |  |
| Hearing Aids |  |  | 1.001 |  |
| Gender Reassignment |  |  | 1.0005 |  |
| Artificial Insemination |  |  | 1.000 |  |

## EXHIBIT I

## ACTUARIAL MEMORANDUM AND CERTIFICATION

## Scope and Purpose

The purpose of this filing is to submit CIGNA Health and Life Insurance Company’s group manual rating methodology. Our pricing model was developed to provide a consistent rating methodology across products. This filing includes Open Access Plus, PPO, Network, Indemnity, and retiree medical insurance product, and is applicable for groups of 51 or more lives. Methodology is also included for Pharmacy products.

## Benefit Description

The benefits covered in this memorandum include group health insurance coverage as described in CIGNA Health and Life Insurance Company forms HP-POL et al, and HC-TOC et al.

## Census

Member level census will be used when available. If only subscriber level data is available, penetration and translation assumptions will be used to create a member level census for manual rate development. The penetration and translation assumptions used are developed from studies of our book of business, which includes experience from similar CIGNA Health and Life Insurance Company ("CHLIC") policies. Penetration estimates the number of subscribers that will select the CIGNA Health and Life Insurance Company plan; the translation process develops projected subscribers and members within rating tiers.

## Adjustments to Base Claims

The base claim rates by area are adjusted for certain group and member characteristics. These include industry loads and discounts, age and sex demographic adjustments, and trends.

Adjustments for industry (SIC) are developed from a study of our book of business combined with results from an outside consultant's national industry factor assessment study.

Age and sex demographic adjustments are developed from a study of our book of business. The resulting age/sex slopes are normalized to represent the national census.

Trends reflect historical experience from CHLIC's group medical experience and projections for future levels. Medical trend rates are applied on a daily basis.

## Benefit Plan Adjustments

Base claims are reduced for specific cost sharing features of the product and benefit plan selected. Copay and other cost sharing benefit design related adjustments are made using assumptions regarding utilization levels by base claim component. Claim distributions are used to determine the impact of deductibles, coinsurance and out of pocket maximums. In addition, a utilization dampening factor is applied to reflect lower utilization levels as cost sharing rises.

## Renewability Clause

The benefit plans covered under this memorandum are guaranteed renewable.
Applicability
CHLIC, Inc. anticipates both renewals and new issues from the forms currently filed.

## Marketing Method

These products are sold to employer-employee groups, labor union groups and association groups through CIGNA Health and Life Insurance Company group sales offices.

## Premium Classes

Premium rates may vary by product, plan design, geographic area, group demographics, industry, effective date, experience, and underwriting discretion.

## Issue Age Range

There are no issue age restrictions in our policy forms; however, eligibility requirements must be fulfilled.

## Premium Modalization Rules

The CIGNA Health and Life Insurance Company Health Manual produces monthly premiums. Modalization factors are expressed as a function of these monthly rates as follows:

| Annual | 11.8227 |
| :--- | :---: |
| Semi-Annual | 5.9557 |
| Quarterly | 2.9852 |

## Distribution of Business

Rates vary by geographic location and group specific characteristics, including demographics. Target distribution is to groups with both single employees and employees with dependents, assuming a 40/60 distribution

## Rating

The group rates filed represent the rate level we expect to be necessary to achieve a desired average loss ratio for all group contracts. Accordingly, actual rates for groups will vary as a result of a variety of factors. These include variation in benefit plan, age, gender, family composition, size, industry, area, healthplan claim experience, and underwriting discretion.

Depending upon group size, case specific claim experience may be used to adjust the rate. Credibility is based on group size, pooling level and months of experience. Rates for partially credible groups are based on a blend of experience and manual rating.

For Minimum Premium plans, the premium paid by the policyholder is reduced for the portion of the total claim amount that is expected to be self-insured.

## Anticipated Loss Ratio

The methodology and supporting factors apply to groups of 51 or more employees.
The anticipated large group loss ratio for this policy is $82.2 \%$.
The components of Cigna's retention for our Large Group pricing are as follows:
Administrative Expenses 6.0\%
Optional Buy-ups 0.6\%
PPACA Fees 3.5\%
Risk Charge: 0.4\%
Premium and Income Taxes 2.0\%
Profit 3.5\%
State Assessments 1.5\%
Commissions 0.4\%
Total 17.8\%
Per the requirement of the GMCB, the profit assumption in our filed and approved rating methodology is $1.0 \%$. In this proposed filing, we are resubmitting assumptions for retention which includes a profit assumption of $3.5 \%$. Please see reference to Cigna's position regarding this assumption in the attached link. http://ratereview.vermont.gov/sites/dfr/files/GMCB 006 15rr_Cigna SupplementalMemo.pdf.

Per the regulations of the Affordable Care Act, Cigna has not paid a rebate in 2013, 2014, and does not anticipate paying a rebate in 2015. The 2016 target loss ratio (traditional basis), $82.2 \%$ (above), corresponds to a projected federal MLR of $86.4 \%$ after adjusting for federally defined elements such as the removal of PPACA taxes \& fees, third party vendor expenses, quality improvement expenses and premium taxes. Cigna does not anticipate paying a rebate in 2016.

## Comparison to Status Quo

This filing includes a number of changes to our medical and pharmacy rating methodologies. It is difficult to quantify each change independent of the others. The average expected decrease in manual rates in Vermont is $-1.1 \%$. This figure was calculated by comparing the current filed and approved manuals using an illustrative effective date of $1 / 1 / 2016$ to the proposed $1 / 1 / 2016$ manuals for a representative sample of Vermont sitused business. Note: The number of fully insured accounts sitused in Vermont in 2014 was 15 consistent with the company's Supplemental Health Care Exhibits.

## Changes to Methodology for the 2016 Cigna Rate Filing

- Updates to the base medical claim assumptions and the claims probability distribution
- Updates to our medical area factors and trend
- Separation of "Lab" and "Radiology" into distinct sub-cost categories. Updates to major service category weightings by sub-cost category
- For plans with combined medical and pharmacy claims: update to pharmacy deductible applicability methodology
- Updates to the collective deductible and collective out-of-pocket maximum methodologies
- Addition of the demographic aging adjustment to the demographic factor
- Addition of a cap on utilization dampening for some major service categories
- Community rate loads - addition of the following:
- More multiple offering load values
- More office surgery adjustment options
- Lock-in decrement
- Case-size adjustment
- Criteria-Based Network Adjustment
- ER/UC steerage adjustment
- Medical specialty drugs steerage adjustment
- Independent lab steerage adjustment
- Enhanced non-par claims adjustment
- Riders
- Updates to base rates for all riders
- Updates to and simplification of the Vision rider methodology, including removal of the platform dependency
- Addition of "Health Advisor" and "Personal Health Team" health management programs
- Updates to the out-of-network preventive care rider methodology
- Addition of standardized pricing for the following benefits not standardly offered:
- Short term rehab coverage for autism and developmental delays
- Applied Behavioral Analysis therapy for autism
- Hearing aids
- Gender reassignment
- Artificial insemination
- Skilled nursing
- Updates to rates for Mental Health/Substance Use Disorder products (referred to in prior filings as "Mental Health/Substance Abuse")
- Updates to the pharmacy area factors, pharmacy trend and base claim assumptions. The updates reflect the growing cost of specialty drugs, planned revisions to our drug lists, and market-specific experience. The impact of these changes will vary based on plan characteristics.

## Credibility Formula Revision

Cigna Health and Life Insurance Company uses experience rating on large employer commercial customers to set future rates based on the past experience of the customer, where a customer is defined as the aggregation of all Cigna Health and Life Insurance Company accounts associated with a given employer, nationwide.

For prospectively rated accounts, the number of member months at which the experience is considered fully credible depends on the pooling point, shown in the chart below. Partial credibility (blending experience with manual) would be reflected using the following formula:

$$
\text { Credibility }=\sqrt{\frac{\text { Member Months }}{\text { Upper Bound }}}
$$

Where the upper bound varies based on pooling point as follows:

| Pooling Point Range | Upper Bound |
| :---: | :---: |
| $\$ 0-\$ 29,999$ | 5552 |
| $\$ 30,000-\$ 59,999$ | 7000 |
| $\$ 60,000-\$ 89,999$ | 9000 |
| $\$ 90,000-\$ 139,999$ | 11000 |
| $\$ 140,000+$ | 12000 |

There is a minimum of 5 months of experience for paid claims and 4 months for incurred claims as well as a minimum overall of 100 member months to have any credibility. If member months are greater than or equal to the upper bound, credibility is $100 \%$.

## ACTUARIAL CERTIFICATION

## Opinion

In my opinion, the rates were developed using reasonable actuarial assumptions, and the rate levels are reasonable in relationship to the benefits provided. The actuarial data and experience will be maintained by the company and available for review by the Commissioner of Insurance upon request.

I certify that to the best of my knowledge and judgment, this rate filing is in compliance with the applicable laws and regulations of the State. In summary, I believe that the rating assumptions proposed will produce rates which are not excessive, inadequate, or unfairly discriminatory

Matthew D. Danziger, FSA, MAAA
Date: 12/31/2015
Actuarial Director

[^0]:    ${ }^{1}$ Partially and fully credible large groups utilize their own experience, in addition to the manual rate, to determine the final rate change that will impact their members.

[^1]:    ${ }^{2}$ The federal medical loss ratio requirements limit the portion of premium dollars insurers can spend on administration, marketing, and profits. Insurers that fail to meet these requirements must pay rebates to consumers.
