Dear Maria Mahmood,

Introduction:

Please see the attached objection letter. Please note that this letter does not contain any new questions but serves as a summary letter of the unanswered questions from the 1/29/2014 objection letter, as well as provide designated space for a response letter to these questions.

Conclusion:

Sincerely, Jacqueline Lee

Re: Cigna Health and Life Insurance Company Company NAIC # 67369; FEIN # 59-1031071 VT - Cigna LG Major Medical Filing SERFF Tracking # CCGP-129378424

Dear Ms. Mahmood:

Lewis & Ellis, Inc (L&E) have been retained by the Green Mountain Care Board ("GMCB") to review the above referenced Large Group product filing submitted on 1/16/2014. Below is a summary of questions that are still pending from the objection letter dated 1/29/2014:

1. Please fill out the Annual Rate Change Distribution table below

Rate Change	Impacted # of Contracts	Impacted # of Members	Impacted # of Groups
Reduction of 15.00% or more			
Reduction of 10.01% to 14.99%			
Reduction of 5.01% to 10.00%			
Reduction of 0.01% to 5.00%			
No Change			
Increase of 0.01% to 5.00%			
Increase of 5.01% to 10.00%			
Increase of 10.01% to 14.99%			
Increase of 15.00% or more			
Total			

- 2. What changes have been incorporated into the rate manual as a result of PPACA?
- 3. Please provide the detailed quantitative and qualitative development of the following:
 - Area Factors;
 - In-Network, Out-of-Network, and Mental Health Cost Trend;
 - Additional Benefits rates (Mental Health, Substance Abuse, and Vision); and
 - Medical MRC/ARC Factors
- 4. Please provide at least one (1) example of the PMPM rate calculation based on a real live case from previous year.
- 5. Please provide the detailed quantitative support for the increase in Rx Cost Trend.
- 6. Please provide an example of how the Deductible and OOP Max adjustments are used in the calculations.
- 7. What is the support for the base claims? What are the base claims in other states?
- 8. What are the applied Nation Medical and Pharmacy Trends that are applied to the provided claim distribution tables?
- 9. Anticipated Loss Ratio section of the Actuarial Memorandum provides a list of changes to the rating methodologies. Please demonstrate how the expected VT impacts were developed for the following changes:
 - The -4.5% change to the area factors;
 - The -1.5% change for utilization assumptions; and
 - The 1.1% change for pharmacy area factors.
- 10. How do the current retention assumptions compare to past experience and what retention assumptions were used in the previous filing?
- 11. Please demonstrate the projected MLR calculation.

Please respond no later than February 6, 2014.

Our review of filing will be placed in suspense pending your response. Contact me if you have any questions.

Sincerely,

Altorgoi

Re: Cigna Health and Life Insurance Company Company NAIC # 67369; FEIN # 59-1031071 VT - Cigna LG Major Medical Filing SERFF Tracking # CCGP-129378424

Dear Ms. Mahmood:

Lewis & Ellis, Inc (L&E) have been retained by the Green Mountain Care Board ("GMCB") to review the above referenced Large Group product filing submitted on 1/16/2014. Upon review of the actuarial memorandum and related information submitted, the following additional information is needed:

- 1. Cover letter states that the Company decided to withdraw the filing for 2013 rates. Does that mean that the 2.8% decrease was not applied for rates charged in 2013?
- 2. Please list and quantify the reasons for the 2014 rate increase of 3.8%.
- 3. Please fill out the Annual Rate Change Distribution table below

Rate Change	Impacted # of Contracts	Impacted # of Members	Impacted # of Groups
Reduction of 15.00% or more			
Reduction of 10.01% to 14.99%			
Reduction of 5.01% to 10.00%			
Reduction of 0.01% to 5.00%			
No Change			
Increase of 0.01% to 5.00%			

Increase of 5.01% to 10.00%		
Increase of 10.01% to 14.99%		
Increase of 15.00% or more		
Total		

- 4. What changes have been incorporated into the rate manual as a result of PPACA?
- 5. Please provide the detailed quantitative and qualitative development of the following:
 - Area Factors;
 - In-Network, Out-of-Network, and Mental Health Cost Trend;
 - Additional Benefits rates (Mental Health, Substance Abuse, and Vision); and
 - Medical MRC/ARC Factors
- 6. Please provide at least one (1) example of the PMPM rate calculation based on a real live case from previous year.
- 7. Define utilization dampening.
 - Has the Utilization Dampening Formula been adjusted since the last filing?
- 8. Define gatekeeper credit.
- 9. Define consumerism adjustment.
- 10. What is Health Advocacy Claim Decrement PMPM and how often is it applied?
- 11. What trend level was used in the last filing for Mental Health?
- 12. Please provide the detailed quantitative support for the increase in Rx Cost Trend.
- 13. What is Dual Choice Adjustment?
- 14. Page "III EU AS1" lists lifetime maximum factors. Please explain how the use of these factors complies with the ACA.
- 15. Please provide an example of how the Deductible and OOP Max adjustments are used in the calculations.
- 16. What is the support for the base claims? What are the base claims in other states?
- 17. What are the applied Nation Medical and Pharmacy Trends that are applied to the provided claim distribution tables?
- 18. Please provide more detail of the Combined Deductible Adjustment. What are the "CS Bands"?
- 19. Please provide the quantitative development of the Multiple Offering Loads.
- 20. Actuarial Memorandum states that there is a limited of number of underwritten groups.
 - How many groups currently in-force are underwritten?
 - Does the experience differ between UW and Non-UW groups?
- 21. Anticipated Loss Ratio section of the Actuarial Memorandum provides a list of changes to the rating methodologies. Please demonstrate how the expected VT impacts were developed for the following changes:
 - The -4.5% change to the area factors;
 - The -1.5% change for utilization assumptions; and
 - The 1.1% change for pharmacy area factors.
- 22. How do the current retention assumptions compare to past experience and what retention assumptions were used in the previous filing?
- 23. Please demonstrate the projected MLR calculation.

Please respond no later than February 3, 2014.

Our review of filing will be placed in suspense pending your response. Contact me if you have any questions.

Sincerely,

Atorfas

Extention Granted

Comments:

Dear Maria,

We are working under a really tight deadline to review these filings; however, we are willing to extend the deadline for the first objection letter to the requested date of February 6, 2014. Nevertheless, please submit any completed responses by February 3, 2014. Please keep in mind that our review has to be completed by March 2, 2014, and it would be unlikely that we'll accommodate extension requests for any future objection letters (which will require a 2-3 day turnaround).

Extension

Comments:

Due to the number of questions on the above reference filing and the tight deadline to respond to them, we are asking for an additional week to complete our response. Is it possible to get an extension until the 6th?

MANUAL MEDICAL RATING FORMULAS

Instructions

- A. Run the census through penetration and translation assumptions to create member-level census. (Skip to B if census is already at the member level.)
- B. Run each individual from the census in A through the calculation steps 1-10 to determine base medical claim costs. Hold the resulting per member per month claim costs.
 - B1. For EPP products, run steps 1-10 using EPP assumptions.
 - B2. For DPP products, run steps 1-10 once using EPP in-network assumptions and run steps 1-10 again using DPP out-of-network assumptions.
 - B3. For PPO products, run steps 1-10 once using PPO in-network assumptions and run steps 1-10 again using PPO out-of-network assumptions.
 - B4. For EPO products, run steps 1-10 once using PPO in-network assumptions.
 - B5. For Indemnity products, run steps 1-10 using Indemnity assumptions.
 - B6. For OAP products, run steps 1-10 once using OAP in-network assumptions and run steps 1-10 again using OAP out-of-network assumptions.
 - Step 1a Extract the National Base Claims
 - Step 1b Adjustment for Wrap and Super Major Medical Products
 - Step 2 Calculate Trend Factor
 - Step 3 Apply Trend Factor
 - Step 4 Apply Copay Impact Factors to Cost Categories Step 5 - Cost-Sharing Offset
 - Step 6 Utilization Dampening
 - Step 7 Base Medical Community Rate
 - Step 8 Industry Load and Capitation Factor
 - Step 9 Demographic Adjustment
 - Step 10 Base Medical Community Rate by Class (CRC) PMPM

C. Other Benefits

Step 11a - Rider Step 11b - Mental Health/Substance Abuse

D Aggregate individual per member per month claim costs

Step 12 - Aggregate Individual Claim Costs Step 13 - Blending In and Out of Network - Applicable to DPP, OAP and PPO products only.

E. Create per member per month revenues by tier.

Step 14 - Final Tiered Rates

Detailed Formulas

The following steps detail the claim cost calculation process. Except where noted, the identical process is followed to determine both in-network and out-of-network claims. The specific steps are applied to each cost category, except as noted. Claim costs for each individual life are calculated separately and the results aggregated.

SECTION B

Step 1a - Extract the National Base Claims

Formula:

Base claim costs are established for experience-rated business. Base Costs are set nationally for Open Access Plus product type and cost category. Major Service Categories (MSC) include: inpatient, outpatient surgical, emergency room, primary care physician, specialty care physician and other.

Within each MSC, there is also a Sub Cost Category (SCC) for services performed at those facilities. Those SCC include: Facility, Professional, Diagnostic Lab/Xray (DXL), Advanced Radiology (ARI), PCP, SCP, Surgery, and Other Services

Extract the base claims for each MSC from the applicable pricing table. Then extract the applicable percentages for each SCC:

Base Claim Cost by MSC and SCC = Base Claim Cost by MSC x SCC %

For products that contain in-network and out-of-network features (PPO, OAP and DPP), first extract the in-network claim costs and proceed with the remaining steps 2 - 10. After completion of steps 2 - 10, extract the out-of-network claim costs and proceed with the remaining steps 2 - 10.

The Base Claims in Tables III EU BA1-5 reflect end-state, experience-rated business.

Step 1b - Adjustment for Wrap and Super Major Medical Products

If the product to be priced is Wrap or Super Major Medical, extract the category specific adjustment factor from the pricing tables corresponding to the plan design selected.

For Wrap produ	cts, the formula:	
Step 2 base cla	ms = Step 1 base claims x (1 - Blue Cross adjustment factor)	
For Super Majo	r Medical products, the formula:	
Step 2 base cla	ms = Step 1 base claims - [(step 1 base claims x Blue Cross adjustment factor)	
	+ (step 1 base claims x Blue Shield adjustment factor)]	

Step 2 - Calculate Trend Factor

Determine the total trend days from the base claim period midpoint to the policy period midpoint. Calculate the trend years by exposure year and calculate applied trend. Use trend factors per the pricing tables specific to the particular product being priced.

Formulas:
Extract trend factors from the pricing tables for the particular product being priced.
Base claim period midpoint = base claim effective date + 182.5 days (use 183 days if leap year)
Policy period midpoint = (policy effective date + next policy effective date) / 2
Total trend days = policy period midpoint - base claim period midpoint
For all years between the base claim effective date and the next policy effective date, calculate the following:
(a) = first day of year n+1, where n = base claim effective date year, base claim effective date year + 1,,
up to next policy effective date year
(b) = base claim effective date + total trend days
(c) = minimum of (a) & (b)
(d) = first day of year n
(e) = base claim effective date
(f) = maximum of (d) & (e)
(g) = maximum of [0, (c - f)]
(h) = number of days in year n (365, unless leap year)
Trend exponent for exposure year $n = (g) / (h)$
Total trend factor = Product of [(1 + trend factor for exposure year n) ^ (trend exponent for exposure year n)]
for all values of n

Step 3 - Apply Trend Factor

Apply the total trend factor determined in step 2 to each MSC and SCC in step 1.

Formulas:	
Step 3 base claims = Step	1 Adjusted Base Claims x Step 2 total trend factor

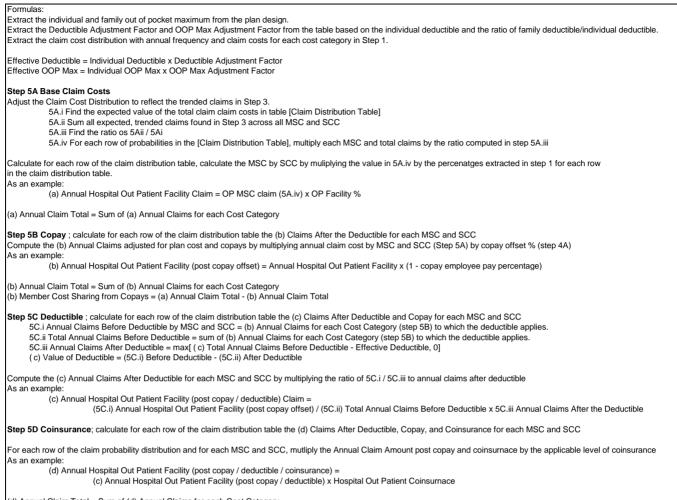

Step 4 - Apply Copay Impact Factors to Cost Categories

Extract the utilization factors for each applicable base claim MSC from the applicable pricing tables (i). Extract the SCC percentages from the applicable pricing tables (ii). Extract the copays per the plan design. Calculate the dollar offset for each cost category, excluding MHSA. The impact for Mental Health & Substance Abuse is calculated in step 5B.

Formulas:

i unnulas.			
Dollar copay impact = (utilization factor for ea	ach N	ISC x SCC % x applicable copay for each cost category*) / 12	[do not include MHSA]
* Note that the effective ER Copa	y is c	ombination of 1/3 UC Copay + 2/3 ER Copay	
Step 4A adjusted base claims = Step 3 base	claim	s - dollar copay impact	
Step 4A copay employee pay percentage	=	(dollar copay impact)	
		(step 3 base claims)	

Step 5 - Cost-Sharing Offset

(d) Annual Claim Total = Sum of (d) Annual Claims for each Cost Category (d) Value of Coinsurance = (c) After Deductible - (d) Annual Claim Total

Step 5E OOP Max ; calculate for each row of the claim distribution table (e) Total Medical Claims Before OOP Max = (b) Annual Claim Total - (d) Value of Coinsurance - ('c) Value of Deductible (e) Member Cost Sharing Applied to OOP = (d) Value of Coinsurance + (c) Value of Deductible (if deductible applies to OOP) + (b) Member Copay Cost Sharing from Copays (if Copays Apply to OOP Max) (e) Total Annual Claims After OOP Max = max [(e) Total Medical Claims + (e) Member Cost Sharing - Effective OOP Max, (e) Total Medical Claims]
Step 5F Annual Max ; calculate for each row of the claim distribution table (f) Total Annual Claims After Annual Max = min [(e) Total Annual Claims After OOP Max, Annual Maximum]
Step 5G Final Cost Sharing Offset (g) Total PMPM After Annual Max = SumProduct[(f) Total Annual Claims After Annual Max, Annual Frequency]/12 Step 5 Total Offset Percentage = 1- [(g) Total PMPM After Annual Max / Step 3 Base Claims]
Step 5H Final Cost Sharing by Cost Category Compute the Out of Pocket Cost Share to add back by each Cost Category (h) Total Out of Pocket amount to add back = (e) Total Annual Claims After OOP Max - (e) Total Medical Claims Before OOP Max
For each MSC and SCC, add back a proportionate amount of the claims from deductible, copay, and coinsurance offsets. For example:
 (h) OOP Hospital Out Patient Surgery Facility = ((b) Member Copay Cost Sharing from Out Patient Facility Copays (if Copays Apply to OOP Max) + ('c) Annual Hospital Out Patient Surgery Facility - (b) Annual Hospital Out Patient Surgery Facility (if outpatient Deductible Apply to OOP Max)
Compute the Annual Max Cost Share to take out by each MSC and SCC. For example:
 (h) Annual Max Hospital Out Patient Surgery Facility = ((d) Annual Hospital Out Patient Surgery Facility + (h) OOP Hospital Out Patient Surgery Facility) / ((d) Annual Claim Total + (h) Total Out of Pocket amount to add back 3 * (h) Total Annual Max amount to take out
Combine the SCC across each MSC. For example: (h) Annual Max Hospital Out Patient = SUM[Annual Max Hospital Out Patient Facility + Annual Max Hospital Out Patient Professional + Annual Max Hospital Out Patient DXL + Annual Max Hospital Out Patient ARI + Annual Max Hospital Out Patient Surgery + Annual Max Hospital Out Patient Other] (h) OOP Hospital Out Patient = SUM[OOP Hospital Out Patient Facility + OOP Hospital Out Patient Professional + ODP Hospital Out Patient DXL + OOP Hospital Out Patient ARI + OOP Hospital Out Patient Surgery + OOP Hospital Out Patient DXL + OOP Hospital Out Patient ARI + OOP Hospital Out Patient Surgery + OOP Hospital Out Patient Other]
(d) Annual Hospital Out Patient Claim = SUM[Annual Hospital Out Patient Facility + Annual Hospital Out Patient Professional + Annual Hospital Out Patient DXL + Annual Hospital Out Patient ARI + Annual Hospital Out Patient Surgery + Annual Hospital Out Patient Other]
Compute the Cost Share for each MSC. For example: (h) Step 5 Hospital Out Patient Offset Percentage = 1 - (SumProduct[(d) Annual Hospital Out Patient + (h) OOP Hospital Out Patient + (h) Annual Max Hospital Out Patient, Annual Frequency]/12) / Step 3 Base Claims (total Out Patient)
Step 5I Final Cost Sharing by Cost Category - Aggregate Deductible Collective Decrement is looked up based on average family size, deductible, and deductible multiplier Single to Family ratio = employee only count / total members

Final cost share adjustment = (1 - Single to Family Ratio) x Collective Decrement

Step 6 - Utilization Dampening

Utilization dampening is applied to each MSC

Formulas: Select UTILDC1, UTILDC2 from the pricing table based on cost category being priced.

CS = (h.Step 5) for each cost category 6A = EXP (UTILDC1 * CS + UTILDC2) + UTILDC3

Step 6 utilization dampening = Maximum of (6A) & (0.20)

Step 7 - Base Medical Community Rate (CR) PMPM

Total claims adjusted for copays, deductibles, coinsurance, utilization dampening, and gatekeeper credit summed for all individuals in a given area and tier.

Formula:	
Base Medical Community Rate PMPM = [Step 3 base claims x (1 - Step 5(h.4) by cost category)	
x Step 6 utilization dampening x (1+ gatekeeper credit fro	om table(if applicable)) x(1+multiple offering load from tables (if applicable))
x med area factors from tables x Product factor from tab	bles ⁽¹⁾ x (1+health advocacy factor (if applicable)) x (1+lifetime max factor)
x (1+Deductible Accumulation Adjustment ⁽²⁾⁾ x (1+Carryo	over Deductible Adj) x (1 + Consumerism Adj)
x (1+Office Surgery Adj) x (1 + Combined Deductible Ad	ljustment) x (1+Breast Pump Supplies Adj) x (1 + 100% Preventive Care Adj)
x(1+Combined Med and Rx OOP adj (if applicable) + hea	alth advocacy claim decrement PMPM
(1) This factor translates the Open Access Plus Product into other products (e.g., HMO and Indemnity)	
(2) This is an adjustment to go from IN and OON deductible cross accumulation to no cross accumulation.	. Cross
accumulation means out of network spending applies towards out-of-network deductible and in-network de	eductible

Select the applicable percentage attributes from the pricing table for each cost category.

Step 8 - Industry Load and Capitation Percentage

Determine applied industry load for each cost category.

Step 9 - Demographic Adjustment

Apply demographic and industry loads to Community Rate PMPM summed for all individuals in a given area and tier. Demo Loads are a function of Sex/Age/Status of the client and deductible amount. Status includes employee, spouse and children. If status of a member cannot be determined, the Demo load are a function of Sex/Age and deductible amount.

Step 10 - Base Medical Community Rate by Class (CRC) PMPM

If status of a member can be determined, extract the age/sex/status/deductible demographic factor from the pricing tables for the particular individual being rated. If status of a member cannot be determined, extract the age/sex/deductible demographic factor from the pricing tables for the particular individual being rated.

Formulas: Base Medical Community Rate by Class PMPM = Step 7 Medical CR x Step 8 applied industry load x (Step 9 age/sex/status/deductible factor OR Step 9 age/sex/deductible factor)

SECTION C2 Step 11 - Other Benefit Riders

Step 11a - Rider

Extract other benefit rider base cost pmpms per the pricing table according to the plan design. Adjust for trend, demographic and industry loads per the other benefit load table.

Formula	S:
For each	rider use the following:
Trend = Age/sex/	ne rider base cost pmpm per the pricing table. step 2 medical trend factor (except for Vision riders, use 1.03). Mental Health/Substance Abuse has own trend (may vary by product/rating area). deductible factor = step 9 age/sex/status/deductible demographic factor load = step 8 applied industry load
	rider pmpm = rider base cost pmpm x trend x age/sex/status/deductible factor* x industry load total riders = sum of all rider pmpms
	v/status/deductible factor applies to all rider except infertility rider pmpm. Infertility rider has its own age/sex factor that does not depend on status/deductible. MO and NWK products, the mental, 'health & substance abuse coverage is capitated and will be included as a rider to the base plan.
h - Mental H	aalth/Substance Abuse

Step 11b - Mental Health/Substance Abuse

Extract the MHSA base cost pmpm per the pricing table. (The table key varies by deductible/copay/coinsurance)
Trend = 6.00%
FFS Adjustment = 1% (This is applied to MHSA Cap pmpm)
Step 11b MHSA pmpm = MHSA base cost pmpm x trend x FFS Adjustment

Combine the individual per member per month claim costs to determine aggregate costs by area and tier.

De	etermine aggregate pmpm for each area (defined as network/pricing module/site combination):							
Ste	Step 12 total aggregate PMPM by area by tier = <u>sum the step 10 total PMPM for all individuals (members) within the given area and tier</u>							
	sum of the number of members within the given area and tier							
l								
De	etermine aggregate pmpm for each other benefit for each area (defined as network/pricing module combination):							
Ste	ep 12 aggregate riders by area by tier = sum the step 11 total riders PMPM for all individuals (members) within the given area and tier							
0.	sum of the number of members within the given area and tier							
Ste	ep 12 aggregate MHSA by area by tier = sum the step 11 total MHSA PMPM for all individuals (members) within the given area and tier							
	sum of the number of members within the given area and tier							
ste	ep 12 aggregate other benefits by area by tier = 'Step 12 aggregate MHSA by area by tier + 'Step 12 aggregate riders by area by tier							
	a dina Madina La and Out of Naturali							
IS-DIE	nding Medical In and Out of Network							
	with an in-network and an out-of-network component, such as POS, this step blends the in-and out-of-network base medical e one overall rate. Once steps 1-10 have been completed for both in-network							
	twork, use the specific in-network and out-of-network rating factors in the following formulas. Blending is done by tier at the area level.							
15-	prmulas:							
	rmulas: elect the applicable base POS load factor from the pricing table. POS load is the pmpm of a blended product divide by the pmpm of an lockin product.							
	tract the followings from the pricing table which vary by specific areas and products.							
	1. A, B, and C factors 2. Average Cost Share differences between in-network and out-network (X)							
After we get the average POS info, we need to calculate the case specific POS load. Case POS Load = A*X^2 + B*X + C								
0	Case POS load After MRC = Max(Case POS Load , 0) * MRC Factor							
Calculate the in-network and OON-network utilization In-Network Utilization = Max(Min((step 12 total aggregated in-network pmpm x (1 - Step 8 aggregated capitation percentage) * (1 + Case POS load After MRC)								
- step 12 total aggregated out-of-network pmp)								
	/ (step 12 total aggregated in-network pmpm x (1 - Step 8 aggregated capitation percentage) - step 12 total aggregated out-of-network pmpm), 1), 0) Out-of-Network Utilization = 1 - In-Network Utilization							

In-Network Utilization = Max(Min() step 12 total aggregated in-network pmpm x (1 - Step 8 aggregated capitation percentage) * (1 + Case POS load After MRC)
 step 12 total aggregated out-of-network pmpm)
/ (step 12 total aggregated in-network pmpm x (1 - Step 8 aggregated capitation percentage) - step 12 total aggregated out-of-network pmpm)
Out-of-Network Utilization = 1 - In-Network Utilization
If OON pmpm is lower than IN PMPM, IN Util will be set to 100%.
Step 13 blended PMPM = [(step 12 total aggregated in-network pmpm x Step 8 aggregated capitation percentage)
+ (step 12 total aggregated in-network pmpm x (1 - Step 8 aggregated capitation percentage) x step 13 in-network utilization)
+ (step 12 total aggregated out-of-network pmpm x step 13 out-of-network utilization)]
Step 13 blended community rated PMPM = [(step 12 total community rated in-network pmpm x aggregate capitation percentage)
 + (step 12 total community rated in-network pmpm x (1 - capitation percentage) x step 13 in-network utilization)
+ (step 12 total community rated out-of-network pmpm x step 13 out-of-network utilization)]

SECTION E Step 14 - Final Tiered Rates

Formulas:
For EPP, EPO and Indemnity products, without either FlexCare/CIGNA Pharmacy Plus or RxPrime/CIGNA Pharmacy:
Step 14 final tiered PMPMs = (step 12 total aggregate PMPM by area by tier + step 12 aggregate other benefits by area by tier
+ step P13 total aggregated pharmacy PMPM by area by tier)
applied loss ratio
For EPP, EPO and Indemnity products, with FlexCare/CIGNA Pharmacy Plus or RxPrime/CIGNA Pharmacy:
Step 14 final tiered PMPMs =(step 12 total aggregate PMPM by area by tier + step 12 aggregate other benefits by area by tier)
applied loss ratio
For DPP, OAP and PPO products, without either FlexCare/CIGNA Pharmacy Plus or RxPrime/CIGNA Pharmacy:
Step 14 final tiered PMPMs = (step 13 blended PMPM + step 12 aggregate other benefits by area by tier)
+ step P13 total aggregated pharmacy PMPM by area by tier (or RxPrime, if applicable)
- Step i to total aggregate primiting i the by the tot time, is applied by
applied loss faulo
For DPP, OAP and PPO and Indemnity products, with FlexCare/CIGNA Pharmacy Plus or RxPrime/CIGNA Pharmacy:
Step 14 final tiered PMPMs =(step 12 total aggregate PMPM by area by tier + step 12 aggregate other benefits by area by tier)
applied loss ratio

SECTION C1 - PHARMACY MANUAL RATING FORMULAS

INSTRUCTIONS:

Use this section to calculate fee-for-service pharmacy expected claim costs.

- Step P1 Extract the Average Wholesale Price per Script
- Step P2 Apply the Discount
- Step P3 Calculate Gross Cost Per Script
- Step P4 Calculate and Apply the Cost Trend Factor
- Step P5 Extract the Script Counts Across All Drug Categories
- Step P6 Calculate and Apply Utilization Trend Factor
- Step P7 Calculate Gross Trended PMPM
- Step P8 Calculate Gross Area-Adjusted PMPM
- Step P9 Calculate Regular Cost Share Using Claims Probability Distribution (CPD)
- Step P10 Calculate Adjusted Cost Share for 4th-tier Cost Categories
- Step P11 Calculate Regular Cost Share PMPM, Regular Net Pharmacy PMPM, and Adjusted Cost Share PMPM
- Step P12 Calculate Aggregate Metrics
- Step P13 Calculate Net Pharmacy Rate
- Step P14 Apply the Clinical Modules Factor
- Step P15 Apply the Pharmacy Demographic Adjustment
- Step P16 Apply the Pharmacy Industry Adjustment
- Step P17 Apply the Pharmacy Mandates Adjustment
- Step P18 Calculate and Apply Utilization Dampening Adjustment
- PB. Determine the Final Pharmacy PMPM for each individual.

Step P19 - Determine Final Pharmacy PMPM

PC. Aggregate individual per member per month claim costs.

Step P20 - Aggregate Individual Claim Costs

DETAILED FORMULAS:

The following formulas detail the claim cost calculation process. The specific steps are applied to each cost category, except as specifically noted. It should be noted that there are no separate provisions made for OON pharmacy benefits. All benefits are assumed to be in network. Claim costs for each individual life are calculated separately and the results are aggregated. Where noted, a separate set of assumptions or calculations are used for cases run on the FACETS platform.

SECTION PA

Step P1 - Extract the Average Wholesale Price per Script

Extract the AWP per script by cost category in both the retail and mail order (MOD) buckets (note: separate assumptions for FACETS platform). AWP per script varies by Formulary Status (Closed vs. Open) and Formulary Type (Standard, Peformance, Advantage, Generics Only).

Step P2 - Apply the Discount

Discounts are estimated for retail and mail. The discounts vary by funding type. Discounts also differ for the FACETS platform, which has separate discounts for its 90-day retail option. If applicable, discounts are adjusted for 90-day retail option.

Formula:

Final Retail Tier Discount = 30-Day Retail Discount x (1 - % of Retail from 90-Day) + 90-Day Retail Discount x % of Retail from 90-Day where % of Retail from 90-Day = [(Retail Script Counts x Retail shift to 90-Day Supply) + (MOD Script Counts x MOD Shift to 90-Day Supply x MOD Multiplier Assumption)] / Retail Script counts If selecting Performance 4-Tier product, where non-preventive generics and preferred brand share the second tier, one needs to calculate a weighted average discount to use.

Formula:

Performance 4-Tier Product, 2nd Tier Discount for Retail or MOD =

- 1 {[(Non-Preventive Generics Script Counts x Non-Preventive Generics AWP) x (1 Generic Discount) + (Preferred Brand Script Counts x Preferred Brand AWP) x
- (1 Preferred Brand Discount)] / [(Non-Preventive Generics Script Counts x Non-Preventive Generics AWP) + (Preferred Brand Script Counts x Preferred Brand AWP)]}

Once discount is calculated, apply it to Average AWP.

Formula:

Step P2 Discounted AWP = (1 - Discount Factor) x Step P1 Average AWP

Step P3 - Calculate Gross Cost Per Script

Dispensing fees are estimated for retail and mail. They vary by funding type and differ for the FACETS platform. For mail, dispensing fees don't vary between brand and generic drugs. For retail, they do.

Sales tax is not included in either for retail or mail due to insignificance.

Formula:

Step P3 Gross Cost Per Script = Step P2 Discounted AWP + Dispensing Fee

Step P4 - Calculate and Apply the Cost Trend Factor

Determine the total trend days from the base claim period midpoint to the policy period midpoint. Calculate the trend years by exposure year and calculate applied trend. Use trend values specific to the particular product being priced. Trend values will also vary by year.

Unit Cost Trend Factor is the sumproduct of days to trend in specific years with those years' corresponding trend factors.

Trend Calculation Example:

1-		Due duet	0:	N	
(a) =	Product	= CignaF	marmac	/

- (b) = Base claim effective date = 1/1/2012
- (c) = Policy effective date of quote = 7/1/2013
- (d) = Policy end date of quote = 6/30/2014
- (e) = Annual CignaPharmacy cost trend factor for 2013/2012 = 6.22%
- (f) = Annual CignaPharmacy cost trend factor for 2014/2013 = 8.09%
- (g) = Base claim period midpoint = b + 182.5 days = 7/1/2012
- (h) = Policy period midpoint = (c + d) / 2 = 12/30/2013
- (i) = Total trend days = h g = 546.5
- (j) = Trend days from 2012 to 2013 = 364.5
- (k) = Trend days from 2013 to 2014 = 182

Unit Cost Trend Factor = $(1 + e) \wedge (j / 366) \times (1 + f) \wedge (k / 365) = (1.0622 \wedge 0.999) \times (1.0809 \wedge 0.499) = 1.1041$

Formula:

Step P4 Gross Trended Cost per Script = Step P3 Gross Cost per Script x Unit Cost Trend Factor

Step P5 - Extract the Script Counts Across All Drug Categories

Extract the retail and MOD script counts PMPY for each cost category (note: separate assumption for FACETS platform). Pull in script counts for buy-up cost categories (e.g. Oral Contraceptives, Smoking Cessation, etc.) as needed. If the category-specific buy-up has not been selected, set the script count to 0. If it has been selected, pull the script count normally as previously mentioned. Utilization by tier varies by Formulary Status (Closed vs. Open) and Formulary Type (Standard, Performance, Advantage, Generics Only). If applicable, script counts are adjusted for 90-day retail option.

Formulas:

Final Retail Script Count = Extracted Retail Script Count + (90-Day Retail Shift from MOD Assumption x MOD Multiplier Assumption x MOD Script Counts) Final MOD Script Count = Extracted MOD Script Count x (1 - MOD Shift to 90-Day Retail Assumption)

Step P6 - Calculate and Apply Utilization Trend Factor

Calculate the utilization trend factor by re-running Step P4 with utilization trend factors.

Formulas:

Utilization Trend Factor = Result of Step P4 using utilization trends instead of cost trends Step P6 Trended Script Count = Step P5 Script Count x Utilization Trend Factor

Step P7 - Calculate Gross Trended PMPM

Calculate Gross Trended PMPM by multiplying trended script count by trended cost per script and dividing by 12 (scripts are PMPY).

Formula:

Step P7 Gross Trended PMPM = Step P4 Gross Trended Cost per Script x Step P6 trended script count / 12

Step P8 - Calculate Gross Area-Adjusted PMPM

Extract the area factor. This factor is based on the site/funding type being rated.

Formula:

Step P8 Gross Area-Adjusted PMPM = Step P7 Gross Trended PMPM x Rx Area Factor

Step P9 - Calculate Regular Member Cost Share Using Claims Probability Distribution (CPD)

Extract the co-pays/co-insurance, deductible, applicable deductible waivers, out-of-pocket maximum, and plan maximum for the plan design.

Step P9a - Readjust Distribution to Appropriate Rate Level

Scale PMPY cost for each row and tier of the pharmacy CPD table, by the case-specific utilization and cost by tier derived in steps P1 through P6. The tiers should be further split into preventive vs. nonpreventive.

Formula:

For each row and tier of CPD,

Step P9a Gross PMPY by Tier = Step P8 Gross Area-Adjusted PMPM / (weighted average of PMPY's within each tier from each row)

Step P9b - Calculate Deductible Impact, Adjust for Excluded Preventives

Compare the summed Gross PMPY's by Tier for each row to the deductible to see how much of the deductible is applied for each row. If the client elects to waive preventive drugs, do not apply those costs to the summed Gross PMPY's by Tier.

Note: For combined deductible, no deductible is used. Instead an adjustment is made as part of the final community loads.

Formula:

For each row of CPD,

Step P9b Deductible Applied = Min [Sum(Step 9a Gross PMPY by Tier), Deductible]

Step P9c - Calculate Percentage of Costs Left after Deductible is Applied

Formula: For each row of CPD, Step P9c Percentage Left = 1 - [Step P9b Deductible Applied / Sum(Step P9a Gross PMPY by Tier)]

Step P9d - Estimate Remaining Member Costs per Script

Take cost per script from each row and tier from the scaled CPD table after step P9a and by the percentage left over after the deductible is applied.

Formula:

For each row and tier of scaled CPD after step P9a,

Step P9d Per Script Cost per Tier = (Cost per Script from scaled CPD) x Step P9c Percentage Left

Step P9e - Adjust for Copays/Coinsurance

To obtain adjusted member costs per script for each tier, factor in copay or coinsurance impact.

Formula:

For each row and tier of CPD,

If copay plan:

Step P9e Adjusted per Script Cost per Tier = Min (Tier copay, Step P9d Per Script Cost per Tier)

If coinsurance plan with minimum and maximum copays:

Step P9e Adjusted per Script Cost per Tier = Min [Max (Tier coinsurance x Step P9d Per Script Cost per Tier, Min Copay), Max Copay]

Step P9f - Calculate Aggregate Member Cost Share

Formula:

For each row of CPD,

Step P9f Aggregate Member Cost Share = Sum [(Step P9e Adjusted per Script Cost per Tier) x (Number of Scripts) + Step P9b Deductible Applied]

Step P9g - Adjust for Out-of-Pocket Maximum

Factor in impact of OOP maximum on member cost share.

Formula:

For each row of CPD,

Step P9g Cost Share after OOP Max = Min (OOP Max, Step P9f Aggregate Member Cost Share)

Step P9h - Adjust for Plan Maximum

Factor in the impact of the plan maximum on member cost share.

Formula:

For each row of CPD,

Step P9h Cost Share after Plan Max = Max (Step P9g Cost Share after OOP Max, Total Estimated Cost - Plan Max)

Step P9i - Calculate Final Cost Share

Compare the weighted average (by row) of the member cost share with the weighted average of the total cost.

Formula:

Step P9i Regular Member Cost Share = Weighted average (Step P9h Cost Share after Plan Max) / Weighted average (Total Costs)

Step P10 - Calculate Adjusted Cost Share for 4th-tier Cost Categories

The cost categories that can be elected to be moved to the 4th tier are oral contraceptives, anti-histamines, cold & cough, and lifestyle. If they are not elected to be moved to the 4th tier, use the regular cost share calculated in Step P9. If they are moved to 4th tier, increase cost share by 5%.

Adding a class to the 4th tier should always increase the cost share for that class, but with minimal impact to overall rates due to low utilization levels.

Formula:

Step P10 Adjusted Cost Share = StepP9i Regular Member Cost Share x 1.05

Step P11 - Calculate Regular Cost Share PMPM, Regular Net Pharmacy PMPM, and Adjusted Cost Share PMPM

Formulas:

Step P11 Regular Cost Share PMPM = Step P8 Gross Area-Adjusted PMPM x Step P9i Regular Member Cost Share Step P11 Regular Net Pharmacy PMPM = Step P8 Gross Area-Adjusted PMPM - Step P12 Regular Cost Share PMPM

For all regular cost categories and other categories that have not been moved to 4th tier, use the following: Step P11 Adjusted Cost Share PMPM = Step P8 Gross Area-Adjusted PMPM x Step P9i Regular Member Cost Share

For cost categories that have been moved to 4th tier, use the following:

Step P11 Adjusted Cost Share PMPM = Step P8 Gross Area-Adjusted PMPM x Step P10 Adjusted Cost Share

Step P12 - Calculate Aggregate Metrics

Many of these aggregate metrics are only used for analysis purposes and visibility.

Step P12a - Aggregate AWP

Calculated by doing a sumproduct of each category's AWP with its corresponding script count and dividing by the total script count.

Example (assuming only retail generic and retail preferred brand categories):

- (a) = Retail Generic AWP = \$50
- (b) = Retail Preferred Brand AWP = \$125
- (c) = Retail Generic Script Count PMPY = 4
- (d) = Retail Preferred Brand Script Count PMPY = 2

Aggregate AWP = (a x c + b x d) / (c + d) = (50 x 4 + 125 x 2) / 6 = 75

Step P12b - Aggregate Discounted AWP, Dispensing Fee

Calculated in the same way as Aggregate AWP in Step P12a.

Step P12c - Aggregate Discount

Calculated by "backing into it" using Aggregate AWP and Aggregate Discounted AWP.

Formula:

Step P12c Aggregate Discount = 1 - (Step P12b Aggregate Discounted AWP / Step P12a Aggregate AWP)

Step P12d - Aggregate Cost Trend Factor, Utilization Trend Factor, Area Factor, and Regular Cost Share

These metrics are equal across all categories, and are thus the same in aggregate.

Step P12e - Aggregate Gross Cost per Script and Gross Trended Cost per Script

Calculated in the same way the individual cost categories are calculated.

Formulas:

Step P12e Aggregate Gross Cost per Script = Step P12b Aggregate Discounted AWP + Aggregate Dispensing Fee Step P12e Aggregate Gross Trended Cost per Script = Step P12e Aggregate Gross Cost per Script x Step P12d Aggregate Cost Trend Factor

Step P12f - Aggregate Script Counts, Trended Script Counts, Gross Trended PMPM, Gross Area Rx PMPM,

Regular Cost Share PMPM, Regular Net Pharmacy PMPM, and Adjusted Cost Share PMPM

Calculated by summing up the corresponding metrics across all cost categories.

Step P12g - Aggregate Adjusted Cost Share

Calculated by "backing into it" using Aggregate Gross Area Rx PMPM and Aggregate Rx Cost Share PMPM.

Formula:

Step P12g Aggregate Adjusted Cost Share = Step P12f Aggregate Adjusted Cost Share PMPM / Step P12f Aggregate Gross Area Rx PMPM

All calculations going forward are done on an aggregate basis only (i.e. not split into cost categories).

Step P13 - Calculate the Net Pharmacy Rate

Formula:

Step P13 Net Pharmacy Rate = Step P12f Aggregate Gross Area-Adjusted PMPM - Step P12g Aggregate Adjusted Cost Share PMPM

Step P14 - Apply the Clinical Modules Factor

Extract the Clinical Modules factor, which is dependent upon which modules/GST programs are selected.

Formula:

Step P14 Clinical-Adjusted PMPM = Step P13 Net Pharmacy Rate x Clinical Modules Factor

Step P15 - Apply the Pharmacy Demographic Adjustment

Extract the age/sex factor from Rx Demo Factors table for the demographic of the case being run and apply to the Step 14 Clinical-Adjusted PMPM. The factor will be calculated in the same way as is done for Medical, just using a different table.

Formula:

Step P15 Clinical/Demo-Adjusted PMPM = Step P14 Clinical-Adjusted PMPM x Pharmacy Demographic Factor

Step P16 - Apply the Pharmacy Industry Adjustment

Extract the unadjusted industry factor and apply it to the PMPM calculated in Step P15.

Formula:

Step P16 Clinical/Demo/Industry-Adjusted PMPM = Step P15 Clinical/Demo-Adjusted PMPM x Industry Factor

Step P17 - Apply the Pharmacy Mandates Adjustment

Extract the mandate factor from the Rx Mandate Factors table for the state/funding type of the case being rated and apply it to the PMPM calculated in Step P16.

Formula:

Step P16 Clinical/Demo/Industry/Mandate-Adjusted PMPM = Step P16 Clinical/Demo/Industry-Adjusted PMPM x (1 + Mandate Factor)

Step P18 - Calculate and Apply Utilization Dampening Adjustment

Extract the Utilization Dampening Adjustment based on member cost share and apply it to the Step 17 Clinical/Demo/Industry/Mandate-Adjusted PMPM.

Formula:

Step P18 Total Benefit Pharmacy CRC = Step P17 Clinical/Demo/Industry/Mandate-adjusted PMPM x Utilization Dampening Adjustment

SECTION PB

Step P19 - Determine Final Pharmacy CRC

Extract the pharmacy loading factor based on applicable community rate adjustments, similar to medical, and apply it to the PMPM calculated in Step P18 to get the community rate by class (CRC) PMPM. This includes items such as multiple offering loads, open access loads, women's preventive health adjustments, generic requirement adjustments, combined deductible and/or OOP maximum adjustments, and deductible accumulation adjustments. Then take out the industry and demographic factors to get to the community rate (CR) PMPM.

Formula:

Step P19 Final Pharmacy CRC = Step P18 Total Benefit Pharmacy CRC x Pharmacy Loading Factor Step P19 Final Pharmacy CR = Step P19 Final Pharmacy CRC / Industry factor / Demographic factor

SECTION PC

Step P20 - Aggregate Individual Claim Costs

Combine the individual per member per month claim costs to determine aggregate costs by area.

Step P20 Total Aggregated CRC by Area =	Sum of the Step P19 Final Pharmacy CRC for all individuals (members) within the given area Sum of the number of individuals (members) within the given area
Step P20 Total Aggregated CR by Area =	Sum of the Step P19 Final Pharmacy CR for all individuals (members) within the given area Sum of the number of individuals (members) within the given area

Experience Rating Formula for CGLIC Medical Products

Blended claims are a weighted average of the group's official experience and the manually rated claims.

The group's official experience is calculated as fee-for-service paid claims, adjusted for large claims and capitation, then multiplied by a trend factor. Large claims up to the pooling limit are added back in. The claims are then adjusted for any changes in liability. This experience could include CIGNA experience on the particular group or a portion of the group or prior carrier experience.

The manually rated claims are calculated according to the formulas and tables filed and approved with the state.

The weights used to blend the claims are based on the credibility of the group. The blended claims may be adjusted for underwriting discretion. A retention charge is then added for administrative expenses, taxes, commissions and profit. The premium is then adjusted for the Experience Protection Benefit (pooling charge) and network access fees, where applicable.

TIERED BENEFITS ADJUSTMENT

1) A manual rate will be developed for the underlying plan, consistent with this filing's base methodology and reflecting the Tier 1 level

- of cost sharing for Specialty/Primary office visits.
- or cost strating to Specially rimitery of the value. The rate adjustment will equal (1 Savings %), according to the following formula: 2) If a client decides to administer the Tier 1 benefit to non-CCN services (no-cut dollars), benefit save is not multipled by the % of members in the no-cut group.

3) PCP and SCP savings are calculated seperatly and then combined for a total impact to the manual rate.

Savings % = [1-% out-of-network]

x [benefit save x CCN dilution % x % non-HPN dollars + benefit save x CCN dilution % x % no-cut dollars] x Dual Choice Adjustment

4) A multiplicative dampening adjustment will be made to this rate if the Cigna care network will be offered in a multiple choice (either with Cigna or slice with another carrier) environment

TABLES

General (example):

Starting Save, % non-HPN dollars, and % no-cut dollars are developed by area based on Care Network contracting data.

% out-of-network

Developed for the underlying plan, consistent with this filing's base methodology and reflecting the Tier 1 benefit level

Medicare COB Factor Language

Rates for Post-65 Medicare Eligible Retirees are adjusted to reflect the coordination of benefits with Medicare.

The Medicare COB adjustment is based on the percentage of Medicare eligible members in the population

being rated, the age/sex, the geographic location of the membership, the coordination of benefits method being applied,

the underlying medical product type, and the plan deductible, coinsurance, copay, out-of-pocket maximum, and other cost-sharing.

Medical and Pharmacy Claim Distribution Table

Medical member cost share is applied to the Medical CPD and Rx member cost share is applied to the Rx CPD below. (Cost share is calculated using the individual separate Medical and Rx CPDs.) The combined cost share is then capped at the OOP level. The adjustment is calculated by dividing the expected value of claims after the OOP is applied by the expected value of claims before the combined OOP is applied.

ADVERSE SELECTION ADJUSTMENT FOR MULTIPLE CHOICE SCENARIOS WITH LESS THAN 6 OFFERINGS

Multiple Offering Loads*						
Offerings	Load					
1	0.0%					
2	2.0%					
3	2.5%					
4+	3.0%					
*Does not apply to Local Plus						

Platform	Riders
Proclaim and Facets	All riders are multiplied by (1) Area Factor, (2) Medical Trend (IN or OON where appropriate), (3) Rider Load (this incorporates the Multiple Offering, Deductible Accumulation, Open Access, Preventive Care, CCF, Breast Pump Supplies, & Combined Deductible), (4) Demographic Factor (equivalent to the medical demographic factor load), and (5) Industry Load. **Couple of exceptions for Vision and Infertility
**	Vision has a different trend. Infertility has a different demographic adjustment.
	Preventive - Routine Care Age 3+ (Max Amt) and FACETS_PreventativeOtherServicesThresholdFor100PctCoverage_IN
Proclaim and Facets	The value of 4.649896 is the PMPM charged when Preventive Care is not selected
	The value of 0.0014 is the slope, which is multiplied the max dollar amount chosen for preventive services.
	This number would be added to the value of 4.649896. The PMPM is capped at 6.96012
	Preventive - Routine Care Age 3+ (OON Buy Up)
Proclaim	IN PMPM multiplied by the POS load
	Preventive - Routine Care Age <= 2 (OON Buy Up)
Proclaim	1.693512 is the PMPM charged when selecting the OON buy-up. This value is constant.
	Preventive - FACETS PreventativeOtherServicesThresholdFor100PctCoverage OON
Facets	IN PMPM multiplied by the POS load
	1.693512 is the PMPM charged when selecting the OON buy-up. This value is constant.
	Outpatient Short Term Rehab Therapy and Chiro (Max Visit)
Proclaim	0.136603 is slope for the first 30 visits
	0.056402 is the slope for all visits after the first 30 visits example: If 45 days were selected, to get you PMPM you would do the following:
	(30*0.136603 + 15*0.056402)
	The PMPM is capped at 7.482
	Chiropractic Care (Max Amt) and FACETS ChiroMaxAmt
Proclaim and Facets	For the first \$1020 of the Max Amount, take the (Max Amount/17)*0.136603
	* Notice how the same slope was used as in the Max Visit above. (Max Amount/17) transforms the dollar amount into a Max Visits amount. For all Max Amount dollars after \$1021 use slope of 0.056402.
	The PMPM is capped at 3.660474
	Chiropractic Care (Max Visit) and FACETS ChiroMaxDays
Proclaim and Facets	0.053831 is slope for the first 60 visits 0.014354 is the slope for all visits after the first 60 visits
	The PMPM is capped at 3.660474
	FACETS OutpatientPT STRMaxDays IN
Proclaim and Facets	0.100276 is slope for the first 20 visits
	0.023541 is the slope for all visits after the first 20 visits example: If 45 days were selected, to get you PMPM you would do the following:
	(20*0.100276 + 25*0.023541)
	The PMPM is capped at 3.417986
	FACETS_OutpatientSpeechHearingOccupationalMaxDays
Proclaim and Facets	0.010766 is slope for the first 20 visits 0.002692 is the slope for all visits after the first 20 visits
	example: If 45 days were selected, to get you PMPM you would do the following:
	(20*0.010766 + 15*0.002692) The DNDM is separad at 0.40372
	The PMPM is capped at 0.40373 .
Proclaim and Facets	FACETS_OutpatientSpeechHearingOccupationalMaxAmt For the first \$600 of the Max Amount, take the (Max Amount/30)*0.010766
rooiaim and racets	* Notice how the same slope was used as in the Max Visit above. (Max Amount/30) transforms the dollar amount into a Max Visits amount.
	For all Max Amount dollars after \$601 use slope of 0.002692.
	The PMPM is capped at 0.40373
	PAR Infertility Treatment - Buy Up #1 and Facets Family Planning 1
Proclaim and Facets	1.266 is the PMPM charged when selecting this option. This value is constant.
	PAR Infertility Treatment - Buy Up #1 OON and Facets Family Planning 1 OON
Proclaim and Facets	IN PMPM multiplied by the POS load
	Infertility Treatment - Buy Up #2 and Facets Family Planning 2
Proclaim and Facets	All PMPMs are based of the value 5.226 Slope = ((Max/20,200)^(0.6))
	Sidpe = ((Max2c),c00°(00)) Final PMPM = 5.226°Slope

	The PMPM is capped at 10.452
Proclaim and Facets	Infertility Treatment - Buy Up #2 OON and Facets Family Planning 2 OON IN PMPM multiplied by the POS load
	Alternative Care (Acupuncture, Naturopath, Massage) Options for Acupuncture and Naturopath therapy with or without Massage are available at \$300 or \$600 annual maximums. The PMPM's without
Proclaim and Facets	Massage are 1.545 and 2.256 respectively, and with Massage they are 1.782 and 3.322 respectively
	Acupuncture (if any Alternative Care option is elected, then this doesn't apply)
Proclaim and Facets	IN PMPM equals 0.557 for 12 visits, 0.661 for 15 visits, and equals 0.835 for 20 and 24 visit options.
	Organ Transplants OON Covered
Proclaim and Facets	0.237 is the PMPM charged when selecting the OON Transplants buy-up. This value is constant.
	Durable Medical Equipment
Proclaim	The PMPM is capped at 1.453
	Durable Medical Equipment OON Buy Up
Proclaim	IN PMPM multiplied by the POS load
	External Prosthetic Appliances
Proclaim	The PMPM is capped at 0.292
Proclaim	External Prosthetic Appliances OON Buy Up IN PMPM multiplied by the POS load
FIOCIAIIII	
Facets	Durable Medical Equipment and External Prosthetic Appliances The PMPM is capped at 1.745
Facets	Durable Medical Equipment and External Prosthetic Appliances OON Buy Up IN PMPM multiplied by the POS load
Proclaim and Facets	Routine Foot Disorders Buy Up 1.007 is the PMPM charged for Max Amounts less than 1,000. 1.184 is the PMPM charged for Max Amounts larger than \$1,000
	Routine Foot Disorders Buy Up OON
Proclaim and Facets	IN PMPM multiplied by the POS load
	Hama Haalth Care (Max Vicit)
Proclaim and Facets	Home Health Care (Max Visit) The Standard (free) benefit is a 64.6 day max
	(-1.232) is the PMPM charged when Max Visits is set to zero. The value of 0.0186613 is the slope multiplied by the number of Max days selected. This product is then added to the value of (-1.232). This
	corresponds to 64.6 max days being the Standard (free) benefit.
	The PMPM is capped at 1.338
Decelsion and Eq. (TMJ
Proclaim and Facets	0.367 is the PMPM charged when selecting the TMJ buy-up. This value is constant
	Bariatric Surgery
Proclaim and Facets	.71 is the PMPM charged for Max Amounts less than or equal to \$8,000 and the value of 2.25 is the PMPM charged for Max amounts greater than \$8,000. Unlimited is 2.58 PMPM.
Proclaim and Facets	Complex Psych Program Savings (-0.178) is the PMPM charged when this benefit is selected. This value is constant
	Narcotics Therapy Program Savings
Proclaim and Facets	Narcotics Inerapy Program Savings (-0.178) is the PMPM charged when this benefit is selected. This value is constant

FACETS Vision Riders

Determine the product type and which methodology to use

1) If plan name is one of the existing medical vision riders from table VisionTranslate, then proceed under the old methodology by looking up the rates by product name and plan name in table VisionRiderPMPM.

2) Next, determine whether the product type is indemnity or PPO:

a) If it is a Facets/CIGNA West product, then it is indemnity b) If it is a CIGNA Vision product, then it is PPO *(currently not rated in MRE)*

Calculate effective trend as follows:

1) The experience period midpoint is 7/1/2011.

2) The rating period begin date is the effective date.

3) The rating period end date is the option date.

4) The rating period midpoint is the average of the effective date and option date.

5) Annualized trend is set at 3.0%.

6) Effective trend = (1 + annualized trend) ^ (number of days in [rating period midpoint - experience period midpoint]/365.25)

Vision trend is generally low. Scheduled fees tend to increase year-over-year for exams but decrease for materials, which balances out to slightly positive trend. Most of real trend is due to increased utilization, but the pricing assumes trend shows up in cost.

The tiering cost factor is calculated as follows:

1) If the census is a demographic census, then the **tiering cost factor** is the Grand Composite Cost ACS from **tableVisionTiering** multiplied by the aggregate medical demo factor.

2) If the census is a relationship census, then the tiering cost factor is calculated as follows:

- (a) subscribers multiplied by the cost from table Vision Relatinship
- (b) spouses multiplied by the cost from table Vision Relatinshiop
 - (c) dependents multiplied by the cost from table Vision Relationship
 - (d) [(a) + (b) + (c)] divided by total subscribers

The tiering cost factor is 2(e) from above.

tableVisionTiering

			Distributio
Tier	Cost ACS	Member ACS	n
Subscribers Single	1.000	1.000	46.9%
Subscribers Two Party	2.000	2.000	18.1%
Subscribers EE+Child	2.020	2.700	9.7%
Subscribers Family	3.224	4.040	25.3%
Grand Composite	1.936	2.11	100.0%

tableVisionRelationship

Tier	Cost
Subscriber	1.000
Spouse	1.000
Dependent	0.600

There are no demo factors used to price vision, other than a load for 65+. The implied demo factors are built into the Cost ACS factor, since children have lower claim costs.

The 65+ load is calculated as follows:

1) If the census is a demographic census, then the 65+ load is 1.00.

2) If the census is a relationship census, then the 65+ load is calculated as follows:

 (a) the sum of all subscribers 65+ divided by calcCensusTotalSubscribers
 (b) (a) * a 65+ factor from table65Load

table65Load

Age	Load
65-	1.000
65+	1.100

The 65+ load reflects increased utilization of bifocal, trifocal, and progressive lens by those aged over 65+ compared to the general adult population.

The small group load is calculated as follows:

(1) If calcCensusTotalSubscribers is less than 50, then the**small group load** is the factor from **tableSGLoad** (2) Otherwise, it is 1.00

tableSGLoad

Subscribers	Load
1	1.000
50	1.100

The small group load applies due to antiselection in smaller cases.

The industry load is calculated as follows:

(1) Look up the industry factor using the caseSIC from tableIndustryLoad below

tableIndustryLoad

SIC Code	Factor
0	1.000
1000	1.000
1500	0.930
2000	1.180
4000	1.000
5000	1.090
5200	1.020
6000	1.210
7000	1.140
7200	1.110
7300	1.100
7500	1.000
7600	0.930
7800	1.000
7900	1.000
8000	1.030
8100	1.040
8200	1.140
8300	0.870
8400	1.120
8600	1.120
8900	1.100
9100	1.180
9999	1.000

The industry load reflects different utilization patterns across industries either due to eyewear requirements (cosmetic or otherwise), better product awareness, or eye health.

The frequency load is calculated as follows:

(1) Determine if the plan design covers an exam only or materials as well.

(2) If it covers an exam only, look up the exam frequency load from tableExamFrequency using input VisionEyeExamFrequency.

tableExamFrequency

Frequency		Factor
	12	1.01
	24	0.7

(3) If it covers materials as well, lookup the corresponding frequency loads from tableComprehensiveFrequency using input FACETS_VisionLensesContactsFramesFrequency.

tableComprehensiveFrequency

Frequency	Exam	Lenses	Contacts	Frames	Materials
12		1	1	1	1
24	0.650	0.700	0.700	0.700	0.700

The frequency load accounts for different utilization patterns given a 24 month coverage period.

The comprehensive exam load is calculated as follows:

(1) Lookup the comprehensive exam load from tableComprehensiveExam.

tableComprehensiveExam

Type of Plan	Factor
Comprehensive	1.7
Exam	1

When materials are covered as well as the exam, members are 62% more likely to get an exam compared to members in an exam only plan.

Calculate the network utilization as follows:

(1) Lookup the network utilization based on product type from tableNetworkUtilization.

tableNetworkUtilization

Product Type	Private	Retailer	OON
PPO	84.6%	15.4%	8.0%
Indemnity	89.8%	10.2%	100.0%

For the PPO, approximately 90% of IN network utilization goes to independent, private retailers. The other 10% goes to chain retailers. About 5% of total utilization goes out of network for PPO type plans.

For indemnity plans, all 100% is "out of network," so to speak.

Calculate the total cost per exam claim as follows:

(1) Lookup the relevant row from tableExamCost using Site.

(2) Calculate the in-network average total cost per exam claim as follows:

(a) if the product type is indemnity, this is \$0.00

- (b) if the product type is PPO, then this is the retailer utilization times the retailer scheduled cost from tableExamCost plus the independent utilization times the independent scheduled cost from tableExamCost
- (c) (b) times the effective trend

(3) Calculate the out-of-network average total cost per exam claim as follows:

(a) the retailer utilization times the retailer U&C cost from $\ensuremath{\textbf{tableExamCost}}$

plus the independent utilization times the independent U&C cost fron**tableExamCost** (b) (a) times the **effective trend**

tableExamCost

tableExamCost

The idea here is to take calculate the IN and OON average claim cost separately, since benefits are different in each case. Then each claim cost can be used to figure out the expected claim cost IN vs. OON based on the benefit design.

Calculate member cost share and claims cost per service type as follows:

(1) Calculate the IN and OON member cost share per service type in terms of dollars for utilization dampening:

- (a) if there is a copay for a service, then this is the member cost share for that service (b) if the service type is contact lens or frames and there is an allowance, then
- the member cost share is 0
- (c) if there is a single allowance for all materials combined (contact lenses, frames, and lenses), then the member cost share is 0
- (d) if there is an allowance for a specific service type, then the member cost share is the average total cost for that service minus the allowance (floored at 0)

(2) Calculate the IN and OON claims cost per service for each service type in terms of dollars.

- (a) if there is a copay for a service, then the claims cost is the average total cost for that service minus the copay
- (b) if the service type is contact lens or frames and there is an allowance, then the claims cost is the allowance
- (c) if there is a single allowance for all materials combined (contact lenses, frames, and lenses), then the member claims cost is the allowance
- (d) if the service type is not contact lens or frames and there is an allowance, then the claims cost is the lesser of the average total cost for that service or the allowance

Increased member cost share decreases utilization. The only exception is for services where the unit costs are variable and there is an allowance. Frames and contact lens fall into this category. Members can purchase more expensive frames given a higher frames/materials allowance. They can also increase the number of contact lens purchased given a higher contact lens/materials allowance

Calculate the utilization dampening factor as follows.

(1) The exam utilization dampening factor is the greater of 50% or 1 - (exam factor frontableUD times the dollar member cost share).

(2) The materials utilization dampening factor is the greater of 50% or 1 - (materials factor frontableUD times the dollar member cost share).

tableUD	
Service	Factor
Exam	-0.72%
Materials	0.00%

Each dollar of additional member cost share reduces the expected utilization for that service by .72% for exams and .2% for materials. It's capped at 50% to reflect that some members will utilize the service regardless of coverage, due to discounts, or otherwise (actual number is lower than this).

Calculate the total utilization load as follows.

- (1) 65+ load
- (2) small group load
- (3) industry load
- (4) tiering cost factor

This load gets applied to all service types IN and OON.

⁽⁵⁾ The total utilization load is (1) x (2) x (3) x (4).

Calculate utilization for exams as follows.

(1) Lookup exam base utilization from table Service Utilization.

- (2) Calculate exam utilization load as follows:
 - (a) total utilization load
 - (b) frequency load for exam (c) comprehensive exam load
 - (d) utilization dampening factor
 - (e) (a) x (b) x (c) x (d)
- (3) If product type is PPO, calculate IN exam utilization as follows:
 - (a) Base utilization
 - (b) exam utilization load
 - (c) (a) x (b)
- (4) If product type is PPO, calculate OON exam utilization as follows:
 - (a) Base utilization divided by [(1 OON utilization)/OON utilization] (b) exam utilization load
 - (c) (a) x (b)

(5) If product type is indemnity, calculate OON exam utilization as follows:

- (a) Base utilization divided by (1-OON utilization)
 - (b) exam utilization load
 - (c) (a) x (b)

tableServiceUtilization

	IN	
Service Type	Subscriber	Category
Exam	30.10%	Exam
Frames	32.68%	Frames
Single Vision	15.14%	Lens
Contact Lenses (soft)	9.33%	Contact Lens
Contact Lenses (hard)	3.11%	Contact Lens
Progressive lenses	8.19%	Lens
Contact Lens Exam	9.36%	Contact Lens
Bifocal	8.30%	Lens
Polycarbonate	12.85%	Lens
Antireflective	16.16%	Lens
Trifocal	0.24%	Lens
Photochromic	6.65%	Lens
Scratch Coat	1.87%	Lens
UV	0.50%	Lens
Lenticular Lens	0.02%	Lens
Therapeutic CL	0.20%	Lens
Safety Glasses	12.95%	Frames
Tints	1.20%	Lens
Materials	45.10%	Materials
Low Vision	0.10%	Lens
High Index	4.04%	Lens

The subscriber utilization in the table above is based on utilization count divided by eligible subscribers,

Calculate utilization for materials as follows.

(1) If the plan has a single allowance for all materials (contact lenses, lenses, frames), look up the base "Materials" utilization from tableServiceUtilization. Otherwise, look up base materials utilization by service type.

(2) Calculate the materials utilization load as follows: (a) total utilization load

- (b) frequency load for total materials or service type (c) utilization dampening factor
- (d) 1.50 if additional materials are covered, 1.0 otherwise
- (e) (a) x (b) x (c) x (d)
- (2) If product type is PPO, calculate IN materials utilization as follows:
 - (a) Base utilization for total materials or service type
 - (b) materials utilization load
 - (c) (a) * (b)
- (3) If product type is PPO, calculate OON materials utilization as follows:
 - (a) Base utilization divided by [(1 -OON utilization)/OON utilization] (b) materials utilization load
 - (c) (a) * (b)
- (4) If product type is indemnity, calculate OON materials utilization as follows:
 - (a) Base utilization divided by (1-OON utilization)
 - (b) materials utilization load

(c) (a) * (b)

Calculate average in network claim cost for each service type as follows:

- (1) If product type is indemnity, then this is zero for all service types. Otherwise, proceed to step 2.
- (2) Calculate the IN PEPM claim cost for each service (including combined materials allowance) as follows:
 - (a) IN claims cost per service
 - (b) IN utilization
 - (c) (a) x (b) divided by policy period length in months (i.e. 12 for 1 year)
- (3) Calculate the IN PEPM cost share for each service as follows:
 - (a) IN cost share per service
 - (b) IN utilization
 - (c) (a) x (b) divided by policy period length in months (i.e. 12 for 1 year)

Calculate average out of network claim cost for each service type as follows:

- (1) Calculate the OON PEPY claim cost for each service (including combined materials allowance) as follows: (a) **OON claims cost per service**

 - (b) OON utilization
 - (c) (a) x (b) divided by policy period length in months (i.e. 12 for 1 year)
- (2) Calculate the OON PEPM cost share for each service as follows:
 - (a) OON cost share per service (b) OON utilization
 - (c) (a) x (b) divided by policy period length in months (i.e. 12 for 1 year)
- Calculate the final PEPM and PMPM rate as follows.
- (1) Calculate the PEPM manual rate by summing up the IN and OON PEPM claim costs across all service types.
- (2) Calculate the PMPM manual rate as follows:
 - (a) PEPM manual rate
 - (b) average contract size: total members divided by total subscribers (c) (a) divided by (b)
- (3) Calculate the PEPM cost share by summing up the IN and OON PEPM cost share across all service types.
- (4) Calculate the **cost share** % as follows:

(a) [PEPM cost share]/[PEPM cost share + PEPM manual rate]

(5) Any rollups should be done by summing up the raw dollar amounts and dividing by the sum of the members or subscribers.

ACTUARIAL MEMORANDUM

Scope and Purpose

The purpose of this filing is to submit CIGNA Health and Life Insurance Company's group manual rating methodology. Our pricing model was developed to provide a consistent rating methodology across products. This filing includes Open Access Plus, PPO, Network, Indemnity, and retiree medical insurance product, and is applicable for groups of 51 or more lives. Methodology is also included for Pharmacy products.

Benefit Description

The benefits covered in this memorandum include group health insurance coverage as described in CIGNA Health and Life Insurance Company forms HP-POL et al, and HC-TOC et al.

Census

Member level census will be used when available. If only subscriber level data is available, penetration and translation assumptions will be used to create a member level census for manual rate development. The penetration and translation assumptions used are developed from studies of our book of business, which includes experience from similar Connecticut General Life Insurance Company ("CGLIC") policies. Penetration estimates the number of subscribers that will select the CIGNA Health and Life Insurance Company plan; the translation process develops projected subscribers and members within rating tiers.

Adjustments to Base Claims

The base claim rates by area are adjusted for certain group and member characteristics. These include industry loads and discounts, age and sex demographic adjustments, and trends. Adjustments for industry (SIC) are developed from a study of our book of business, which includes experience from similar CGLIC policies, combined with results from an outside consultant's national industry factor

assessment study.

Age and sex demographic adjustments are developed from a study of our book of business, which includes experience from similar CGLIC policies. The resulting age/sex slopes are normalized to represent the national census.

Trends reflect historical experience from CIGNA's group medical experience, which includes experience from similar CGLIC policies, and projections for future levels. Medical trend rates are applied on a daily basis.

Benefit Plan Adjustments

Base claims are reduced for specific cost sharing features of the product and benefit plan selected. Copay and other cost sharing benefit design related adjustments are made using assumptions regarding utilization levels by base claim component. Claim distributions are used to determine the impact of deductibles, coinsurance and out of pocket maximums. In addition, a utilization dampening factor is applied to reflect lower utilization levels as cost sharing rises.

Renewability Clause

The benefit plans covered under this memorandum are guaranteed renewable.

Applicability

CIGNA Health and Life Insurance Company anticipates both renewals and new issues from the forms currently filed.

Marketing Method

These products are sold to employer-employee groups, labor union groups and association groups through CIGNA Health and Life Insurance Company group sales offices.

Underwriting

A very limited number of groups are medically underwritten, though the effects are not currently quantified.

Premium Classes

Premium rates may vary by product, plan design, geographic area, group demographics, industry, effective date, experience, and underwriting discretion.

Issue Age Range

There are no issue age restrictions in our policy forms; however, eligibility requirements must be fulfilled.

Premium Modalization Rules

The CIGNA Health and Life Insurance Company Health Manual produces monthly premiums. Modalization factors are expressed as a function of these monthly rates as follows:

 Annual
 11.8227

 Semi-Annual
 5.9557

 Quarterly
 2.9852

Distribution of Business

Rates vary by geographic location and group specific characteristics, including demographics. Target distribution is to groups with both single employees and employees with dependents, assuming a 40/60 distribution.

Experience Rating

The group rates filed represent the rate level we expect to be necessary to achieve a desired average loss ratio for all group contracts. Accordingly, actual rates for groups will vary as a result of a variety of factors. These include variation in benefit plan, age, gender, family composition, size, industry, area, healthplan claim experience, and underwriting discretion. Depending upon group size, case specific claim experience may be used to adjust the rate.

Credibility is based on group size and months of experience. Rates for partially credible groups are based on a blend of experience and manual rating.

Anticipated Loss Ratio

The methodology and supporting factors apply to groups of 51 or more employees. The anticipated large group loss ratio for this policy is 85%, using the loss ratio definition consistent with PPACA. This filing includes a number of changes to our medical and pharmacy rating factors and assumptions. Each year Cigna engages in a variety of studies to examine and potentially update portions of our rating methodology. This is done to ensure that pricing factors are accurate and reflect recent experience. We may also modify pricing in response to changes in state or federal regulations. It is difficult to quantify each change independent of the others, but overall we have estimated the following impacts based upon our national book of business:

- Updates to our medical area factors across the country to reflect recent favorable claims experience. Overall this results in roughly a 2.5% decrease to medical expected claims.
- A change in utilization assumptions for 2012 that result in an overall decrease (national book of business) of roughly 1.5% to medical expected claims.
- Updates to pricing for certain coverage riders, including Chiropractic Care, Durable Medical Equipment, External Prosthetic Appliances, and Therapies. The overall impact of these changes is roughly a 1.9% decrease to medical expected claims, but impacts will vary widely depending upon the riders selected and the levels of coverage associated with each rider.
- Updates to our pricing methods for plans with a collective (nonembedded) deductible. This sort of deductible is more common with HRA and HSA/HDHP plans. The net impact to our Collective book of business is roughly a 3% increase but overall the impact to the entire book of business is a 0.3% increase to medical expected claims.
- A number of updates to pharmacy pricing factors, including:
 - o Average Wholesale Prices
 - o Script Counts
 - o Trend factors
 - o Step Therapy Cost Savings
 - o Area Factors

Overall these changes result in an increase of 2.9% to pharmacy expected claims.

The components of Cigna's retention for our Large Group pricing are as follows: Administrative Expenses 7% Commissions 3% Premium and Income Taxes 2% Profit 3% Total 15%

Opinion

In my opinion, the rates were developed using reasonable actuarial assumptions, and the rate levels are reasonable in relationship to the benefits provided. The actuarial data and experience will be maintained by the company and available for review by the Commissioner of Insurance upon request.

I certify that to the best of my knowledge and judgment, this rate filing is in compliance with the applicable laws and regulations of the State. In summary, I believe that the rating assumptions proposed will produce rates which are not excessive, inadequate, or unfairly discriminatory.

November 12, 2013

The Honorable John P. Crowley Commissioner of Banking, Insurance, Securities and Health Care Administration Vermont Division of Insurance 89 Main Street, Drawer 20 Montpelier, VT 05620-3101

RE: CIGNA Health and Life Insurance Company GROUP HEALTH RATING MANUAL NAIC# 67369

Dear Mr.Crowley:

We are submitting for your approval our Group Health Rating Manual Rate Filing for CIGNA Health and Life Insurance Company (CHLIC).

This medical rate filing duplicates the rate filing recently submitted to your Department for Connecticut General Life Insurance Company (CGLIC). Please note the CIGNA Health and Life Insurance Company is a direct, wholly owned subsidiary of Connecticut General Life Insurance Company.

Our intent with filing an updated rate methodology is to maintain rates consistent with those filed for CGLIC. Our pricing analysis is based upon a combination of the experience from both CGLIC and CHLIC. We anticipate that the books of business written in both CGLIC and CHLIC will continue to be very similar.

Questions regarding this application can be directed to Wayne Chuang at (860) 226-5921, or via email at Wayne.chuang@cigna.com.

Sincerely,

David Whym

David Myers, ASA, MAAA Actuarial Director

VERMONT FILING SUMMARY Cigna Health and Life Insurance Company

Vermont (only) (000's)

5th prior year 2008	-	-	0.0%
4th prior year 2009	-	-	0.0%
3rd prior year 2010	-	-	0.0%
2nd prior year 2011	2,380	1,093	45.9%
1st prior year 2012	11,951	7,874	65.9%

Countrywide (000's)

5th prior year 2008	-	-	0.0%
4th prior year 2009	-	-	0.0%
3rd prior year 2010	-	-	0.0%
2nd prior year 2011	296,642	226,864	76.5%
1st prior year 2012	1,880,578	1,516,282	80.6%

1. Cover letter states that the Company decided to withdraw the filing for 2013 rates. Does that mean that the 2.8% decrease was not applied for rates charged in 2013?

Cigna employs a series of filing indicators in our rating application to control which set of rating factors and formulas are used in each state. For states that require approval of rate filings we set the indicator to point to current rates until we receive a formal approval. At that time we set the indicator to point to the proposed rates. Because our 2013 filing was never approved in Vermont we did not switch the filing indicator to point to the proposed rates, and therefore the 2.8% average rate decrease was never implemented in our manual rating engines.

However, when Pricing completes its annual review of experience each year we do communicate results to Underwriting. Through those communications our Underwriting partners would have been made aware that we saw favorable experience in Vermont and that a rate decrease was proposed for the state. On a case-by-case basis underwriters might then factor that knowledge into their rate setting processes and choose to reduce rates below pure manual. Underwriters are afforded some discretion in setting final rates and a decision to lower rates might be based on the assumption that actual experience will emerge more favorably than what the current manual pricing would suggest.

2. Please list and quantify the reasons for the 2014 rate increase of 3.8%. The primary driver behind the rate increase is trend: both known and planned unit cost increases from providers and utilization and/or mix of service increases. For 2014 this is estimated to be 8.7 %. The rate increase also includes changes in area factors when we review claims in Vermont and compare against manual rates and pricing methodology updates. In 2014 we estimate that Vermont accounts will experience a combined -4.5% decrease (area factor and methodology updates, excluding trend). Therefore, the combined estimated impact is (1-0.045)*(1+0.087)-1, or +3.8%.

3. Please fill out the Annual Rate Change Distribution table below Response pending

4. What changes have been incorporated into the rate manual as a result of PPACA?

Response pending

5. Please provide the detailed quantitative and qualitative development of the following:

- Area Factors;
- In-Network, Out-of-Network, and Mental Health Cost Trend;
- Additional Benefits rates (Mental Health, Substance Abuse, and Vision); and
- Medical MRC/ARC Factors

Response pending

6. Please provide at least one (1) example of the PMPM rate calculation based on a real live case from previous year.

Response pending

7. Define utilization dampening.

• Has the Utilization Dampening Formula been adjusted since the last filing? Utilization dampening is Cigna's terminology for the formulas we utilize to adjust expected claims based upon the relative richness of benefits under the plan. As clients modify benefits and shift more of the costs to the individual member (through higher deductibles and copays, lower coinsurance, etc.) we expect members to curtail their consumption of healthcare services to some degree. The utilization dampening formulas model the anticipated decrease in utilization as the member's share of total plan costs increases. These formulas have not changed from the most recent approved filing in Vermont.

8. Define gatekeeper credit.

The gatekeeper credit is a decrement to the expected claims for plans where all medical care is coordinated by the member's primary care physician (PCP). At the present time very little of Cigna's book of business still requires that the PCP act as a gatekeeper, so this credit is rarely applied.

9. Define consumerism adjustment.

The consumerism adjustment is a reduction to expected claims for so-called consumer driven health plans, in particular Cigna's account-based HRA and HSA plans. We have observed that experience for these plans tends to be slightly more favorable than plans with similar benefits but without an account component. This credit is a relatively simple way to reflect that favorability without having to make more significant modifications to our core pricing methodology. This credit has not been reviewed since the last approved rate filing in Vermont.

10. What is Health Advocacy Claim Decrement PMPM and how often is it applied?

Health Advocacy is a somewhat generic Cigna terminology for a variety of medical outreach programs, including wellness and disease management programs. These programs are expected to reduce overall claims by helping members better manage their health and healthcare spending, whether those members are relatively healthy or have chronic health conditions. The adjustments and claim decrements reflect the anticipated impacts of the various programs.

11. What trend level was used in the last filing for Mental Health?

The last approved filing dates from 2012. The mental health trend in that filing was 6% and that value is consistent with this year's requested rate.

12. Please provide the detailed quantitative support for the increase in Rx Cost Trend.

Response pending

13. What is Dual Choice Adjustment?

The Cigna Care Network (CCN) product is one that employs a limited tiered network for certain categories of physicians. The Dual Choice adjustment is used in situations where the CCN product is offered alongside another product. This piece of the pricing methodology ensures we are quoting CCN most effectively as the leanest or only offering, which is where the product is designed to perform best.

If the CCN plan isn't the leaner offering by a significant enough margin (defined here as 10%), the CCN plan experience is less favorable. We believe this is due to a greater percentage of high utilizing members enrolling in the CCN plan. If the CCN plan is offered alongside another plan, and the CCN plan isn't at least 10% lower cost, then we decrease the CCN pricing discount. If the CCN plan is offered alongside another plan but is at least 10% leaner then we make no adjustment to the CCN discount. If the CCN plan is the only plan being offered then the dual choice adjustment does not come into play.

14. Page "III EU AS1" lists lifetime maximum factors. Please explain how the use of these factors complies with the ACA.

The lifetime maximum factors shown on page III EU AS1 are mostly obsolete. These factors were used when medical plans commonly included a lifetime maximum on benefits payable under the plan. With the passage of the Affordable Care Act these lifetime maximums are no longer allowed. However, clients with plans that incorporated a lifetime maximum were able to "phase out" the maximums and we've left the pricing factors in place in order to support that transition. At some point in the near future we will likely remove the factors from our manual pricing methodology altogether.

15. Please provide an example of how the Deductible and OOP Max adjustments are used in the calculations.

Response pending

16. What is the support for the base claims? What are the base claims in other states?

Response pending

17. What are the applied Nation Medical and Pharmacy Trends that are applied to the provided claim distribution tables?

Response pending

18. Please provide more detail of the Combined Deductible Adjustment. What are the "CS Bands"?

For the most part Cigna employs separate pricing methodologies to calculate manual claims for medical and pharmacy plans. The combined deductible adjustment is used when a client's medical and pharmacy plans share a combined calendar year deductible. The reference to CS in these tables means cost share – i.e., the percentage of covered expenses borne by the individual member. The table lookup is based in part upon the cost share values, which for ease of lookup are expressed in ranges.

19. Please provide the quantitative development of the Multiple Offering Loads. The multiple offering loads are applied to plans where clients offer their employees/subscribers a choice between two or more different plans. In that situation the ability to choose creates a degree of selection bias that doesn't exist when only a single plan is offered. The loads were developed by comparing actual to expected results for single option plans with results for plans that are part of a multiple offering situation. These loads have not been reviewed in several years so we do not have any data that can be provided quickly. We can extract some data from our Medical Rate Review databases but that will require some time to compile.

20. Actuarial Memorandum states that there is a limited of number of underwritten groups.

• How many groups currently in-force are underwritten?

• Does the experience differ between UW and Non-UW groups?

The section that mentions medical underwriting is obsolete and should be removed from our rate filings. Cigna employs a form of medical underwriting for smaller self-funded groups. We had begun to extend that medical underwriting process to fully insured groups in some markets but that pilot was halted after the passage of the Affordable Care Act. None of our insured business in Vermont has been priced using any form of medical underwriting.

21. Anticipated Loss Ratio section of the Actuarial Memorandum provides a list of changes to

the rating methodologies. Please demonstrate how the expected VT impacts were developed for the following changes:

• The -4.5% change to the area factors;

• The -1.5% change for utilization assumptions; and

• The 1.1% change for pharmacy area factors.

Response pending

22. How do the current retention assumptions compare to past experience and what retention assumptions were used in the previous filing?

Response pending

23. Please demonstrate the projected MLR calculation.

Response pending

Vermont Filing - Response to Objections

1. Please fill out the Annual Rate Change Distribution table below

We have provided counts for members and groups. We do not have any data that directly corresponds to contracts, but in our estimation this should be very similar to (if not the same as) the data provided for groups. Please note that the data reported for members should reflect only those individuals who reside in Vermont. The group counts include policies with members in Vermont as well as other states, so the distribution of rate changes for groups will reflect rate impacts for states other than Vermont.

The member and policy counts shown in this exhibit are based upon Cigna's entire book of business in Vermont and not just fully insured accounts. We believe the distribution would be very similar if limited to fully insured accounts but that information is not readily available. Also note that this exhibit combines business for both Connecticut General Life Insurance Company (CGLIC) and Cigna Health and Life Insurance Company (CHLIC). We conduct our experience reviews and pricing analyses on the entire book and not by legal entity, so a split of this exhibit by legal entity is not readily available.

Range	Member Months	Accounts
reduction of 15% or more	51	1
reduction of 10.01% to 14.99%	-	-
reduction of 5.01% to 10.00%	3,518	9
reduction of 0.01% - 5.00%	49,748	154
no change	-	-
increase of 0.01% to 5.00%	277,628	296
increase of 5.01% to 10.00%	238,303	28
increase of 10.01% to 14.99%	7,318	2
increase of 15% or more	-	-
total	576,566	490

2. What changes have been incorporated into the rate manual as a result of PPACA?

There were no changes made to rating factors or formulas specific to PPACA with this rate filing. The one area of focus this year with respect to PPACA was out-of-pocket maximum requirements. Historically most of our large group medical plans did not have copays accumulate to the OOP maximum. Our rating methodology supports that option, so no changes were needed to our rating engine. However, since that option has been thinly elected in the past we're not confident our factors are as accurate as we'd like. As the book of business with that option increases we plan to review our claims experience and make any necessary modifications to ensure that we're pricing that option in a manner consistent with emerging experience.

3. Please provide the detailed quantitative and qualitative development of the following:

- Area Factors;
- In-Network, Out-of-Network, and Mental Health Cost Trend;
- Additional Benefits rates (Mental Health, Substance Abuse, and Vision); and
- Medical MRC/ARC Factors

<u>Area factors</u> are determined by comparing the geography's average manual rate to the average claims in that geography. Additional consideration is given in situations where the average is skewed by a large case to best allow the area factor to represent an "average" case. The current

area factor is then calibrated based on that comparison. For determining 2014 rates, the comparison between manuals and claims in Vermont suggested a net change of -3.3%. However, this includes the State of Vermont which accounted for approximately 40% of the member months under evaluation. Dampening the weight of this account and other large accounts suggests a net increase of 1%, and that is the rate change enacted. National rate actions are also taken based on review of trend/utilization, and for the 2014 filing an additional -1.5% was taken.

<u>Medical Trend</u> is determined using a variety of quantitative and qualitative information when setting prospective utilization/mix trends. Examples of internal quantitative information include a utilization report, a bed day report and a closed block analysis, all of which utilize recent national data. Examples of qualitative information include items such as economic outlook, flu season severity, changes in provider billing practices, medical technology enhancements, legislative changes, external studies, contracting strategy changes, clinical insight regarding medical management programs, among other drivers. Unit cost trend is determined using various data: 1) historical claim data to determine service weights within a facility and facility weights within a market, 2) facility and professional contract information (for expected cost increases), 3) prospective incorporation of trend improvement from key initiatives to manage medical costs in the current year. A couple examples of key initiatives are enhancements to the claim edits and a new national contract with a radiology vendor. Out of network trend is no longer considered separately for 2014 filing and is included in the overall development of trend. There are still values for out of network trend until the legacy methodology migrates out as new filings are approved.

<u>Mental Health Trend</u>: MHSA prospective trend is calculated using a variety of quantitative and qualitative information. Examples of internal quantitative information include utilization reports, bed day reports, and historical trend analysis. Examples of qualitative information includes items such as legislative changes, contracting strategy changes, and changes in provider billing practices.

<u>Mental Health and Substance Abuse rates</u>: MHSA base rates are developed by applying a trend factor to the prior year's MHSA rates.

Vision Rates: Please see separate PDF file "VT Vision Buildup"

<u>Medical MRC ARC Factors</u> The MRC/ACR factors are a component of the rating_methodology designed to help price the portion of expected claims due to non-participating or out-of-network (OON) providers. Cigna's rating methodology starts from a benchmark that assumes no coverage for services rendered by OON providers. For plans that offer such coverage we apply a load to the benchmark claim rate. That load is comprised of two pieces:

- 1. A POS load, which essentially defines the anticipated level of utilization of OON services for that plan, and
- 2. An adjustment to the expected OON claims to reflect various savings programs.

The OON programs are designed to reduce the billed charges from OON providers. The various programs may employ the use of:

- Secondary networks
- Bill negotiation
- Medicare-based caps on billed charges
- Usual & Customary caps on billed charges

The factors shown in the table are developed from analysis of the savings that Cigna is able to achieve through these various programs. The factors can be thought of as reductions to the load

we would apply for OON coverage in the absence of any savings programs. The baseline or benchmark value for the OON program factors is Usual & Customary at the 80th percentile. The factor for this program is set to a value of 1.000, and all other programs (except higher percentiles of U&C) are assumed to achieve greater savings on OON claims than U&C. For example, the factor for our Medicare Stacked 150% option is 0.318. That means that the combination of saving programs included with this option is expected to reduce OON charges by 68.2% vs. U&C.

4. Please provide at least one (1) example of the PMPM rate calculation based on a real live case from previous year.

Please see attached exhibits.

5. Please provide the detailed quantitative support for the increase in Rx Cost Trend.

The previously approved filing in 2011 had an Rx Cost Trend of 5.0% for 2013/2012 and 2014/2013. The current filing under review has an Rx Cost Trend of 6.22% for 2013/2012 and 8.09% for 2014/2013. The increase in the 2013/2012 Rx Cost Trend is driven by improved insight into Specialty inflation and pipeline drugs. Specifically, new HIV drugs that came out in late 2012 and utilization of Hep C drugs add cost pressure in 2013. Partially offsetting the unfavorable impact from Specialty drugs are significant patent expirations that took place in mid to late 2012 (e.g. Seroquel, Plavix, Singulair, Lexapro). The increase in the 2014/2013 Rx Cost Trend is driven by a significantly lower level of patent expirations, which removes much of the favorability seen in the 2013/2012 Rx Cost Trend. Brand drug inflation (in the 11-12% range) and consistently high specialty drug trend also contribute.

6. Please provide an example of how the Deductible and OOP Max adjustments are used in the calculations.

We believe you may be referring to the adjustments found on page III EU AS1. If that is correct then those adjustments are intended to account for the impact of the family multiple on the calendar year deductible and OOP maximum. For instance, if the individual deductible is \$1,000 and the family deductible is \$3,000 (and non-collective) we then have a multiple of 3 for the family deductible. The adjustments in these two tables allow us to calculate "effective" values for the deductible and OOP maximum that reflect the impact of the family multiples. The larger the family multiple, the smaller the impact.

The tables are based upon the family multiple value and the individual deductible or OOP maximum value. For example, if the family multiple is 2 and the individual deductible is \$1,000 then the adjustment factor is 0.85. That factor is applied to the individual deductible to produce an effective deductible value of \$850. We then apply the effective deductible and OOP maximum values to our medical claim probability distribution.

7. What is the support for the base claims? What are the base claims in other states? The base claim values do not vary by state. These are national average values used to scale our claim probability distributions to the appropriate level. Our base claim values are calibrated to a particular starting point. For this filing that base claim effective date is January 1, 2012. We pull actual claims data for our Cigna book of large group business to help establish the appropriate base claim values.

8. What are the applied Nation Medical and Pharmacy Trends that are applied to the provided claim distribution tables?

The national medical trend rates are used to calibrate the claim distributions to a level consistent with the rate effective date for a particular quote. In the past Cigna used a trend rate specific to each rating area to calibrate the claim distribution. While technically more accurate this approach led to subtle differences in the value of certain fixed dollar plan elements like the calendar year deductible. This was raising concerns with sales people and brokers who could not understand why certain plan design elements had a different impact depending upon the rating area used in the quote. As a result we modified our rating methodology to use national average trend rates to calibrate the claims distributions. This allows for greater consistency in the pricing of the plan design. After that part of the calculation we then introduce adjustments to move from the national average trend rates to market-specific trend rates.

9. Anticipated Loss Ratio section of the Actuarial Memorandum provides a list of changes to the rating methodologies. Please demonstrate how the expected VT impacts were developed for the following changes:

- The -4.5% change to the area factors;
- The -1.5% change for utilization assumptions; and
- The 1.1% change for pharmacy area factors.

This is partially described in our response to question 3 on area factors: 1.5% decrease based on utilization review and 1% increase based on area specific review. What wasn't described accurately in the memo is the 4.5% decrease includes the impact of methodology changes and is not technically an adjustment to the area factor. This implies that the of methodology changes is estimated to be ~4% decrease to the mix of plan designs in Vermont. Pharmacy area factors follow a similar review of comparing manual rates to claims.

Our method for estimating the impact of rating methodology changes involves running a block of business through both the current and proposed rating engines. As part of our review of claims experience we create a version of our rating engines that incorporates all of the proposed changes to our rating formulas and factors. In all other aspects these proposed engines are identical to the current production engines. For this experience review process we also create a database containing information on the vast majority of our book of large group business. We then run two batch processes using the book of business database and the two versions of our rating engines. We can then compare the calculated rates across the entire book of business or a subset of that book. To estimate the rate impacts by state we identify those groups with membership in that state and aggregate the impacts for that subset. Please note that many of Cigna's large group clients have employees or covered members residing in multiple states. Thus, the results reported for Vermont do reflect some influence from other states where groups with Vermont membership also have members residing.

10. How do the current retention assumptions compare to past experience and what retention assumptions were used in the previous filing?

Administrative Expenses	7%
Commissions	3%
Premium and Income Taxes	2%
Profit	3%
Total	15%

This year's is as follows:

Administrative Expenses 7% PPACA Fees 3% Premium and Income Taxes 2% Profit 3% Total 15%

As you may be aware, there was a change to exclude commissions from premium and instead show it as an advisor fee.

In terms of how this compares to experience, taxes and commissions were in line with experience. Operating expenses however were about 2-3% higher than what was priced/expected in the admin fee. We do not yet have full year 2013 financials, however 2012 financials indicate a loss ratio lower than 85%, so profit was higher than assumed and primarily due to a lower than expected trend environment.

11. Please demonstrate the projected MLR calculation.

We are not sure what projected MLR calculation you are referring to. As far as we know there is no such calculation in our filing. We do show historic loss ratios along with premium and claims in the Vermont Filing Summary exhibit. In our Actuarial Memorandum we show our anticipated loss ratio as 85%. This value is not, however, a projection but simply a target loss ratio that our pricing is designed to achieve. In the SERFF data file we do project premium and claim values for the Requested Rate period. These values are calculated as follows:

- Projected Earned Premium derived by taking the Total Earned Premium from the Prior Rate period and applying two years' of trend along with the % average change requested.
- Projected Incurred Claims derived by taking the Projected Earned Premium and multiplying by the target loss ratio of 85%.

If you are looking at some other projection please specify where you are seeing that and we will be happy to review and respond.

Steps P4 & P6: Pharmacy Trend Calculation

Color Key	
Black text =	Descriptive text
Blue text =	Formula
Green text =	Formula that references another sheet
Pink text =	Hard-coded value

Base Claim Effective Date:1/Base Claim Midpoint:7/

1/1/2012 Base claim dates refer to the dates used to come up with the
7/1/2012 pharmacy data tables (see "General Pharmacy Tables"). The pharmacy data tables are trended to the policy period by trending from the base claim midpoint to the policy year midpoint.

Quote Effective Date:	1/1/2
Quote Midpoint:	7/2/2
Quote End Date:	12/31/2

1/1/2014 7/2/2014 12/31/2014

Tr	rend	Da	ys in		Cost	Uti	lization

SECTION C1 - PHARMACY MANUAL RATING FORMULAS

INSTRUCTIONS:

Use this section to calculate fee-for-service pharmacy expected claim costs.

- PA. Run each individual from the census through the calculation steps as indicated below. Hold the resulting per member per r
 - Step P1 Extract the Average Wholesale Price per Script
 - Step P2 Apply the Discount
 - Step P3 Calculate Gross Cost Per Script
 - Step P4 Calculate and Apply the Cost Trend Factor
 - Step P5 Extract the Script Counts Across All Drug Categories
 - Step P6 Calculate and Apply Utilization Trend Factor
 - Step P7 Calculate Gross Trended PMPM
 - Step P8 Calculate Gross Area-Adjusted PMPM
 - Step P9 Calculate Regular Cost Share Using Claims Probability Distribution (CPD)
 - Step P10 Calculate Adjusted Cost Share for 4th-tier Cost Categories
 - Step P11 Calculate Regular Cost Share PMPM, Regular Net Pharmacy PMPM, and Adjusted Cost Share PMPM
 - Step P12 Calculate Aggregate Metrics
 - Step P13 Calculate Net Pharmacy Rate
 - Step P14 Apply the Clinical Modules Factor
 - Step P15 Apply the Pharmacy Demographic Adjustment
 - Step P16 Apply the Pharmacy Industry Adjustment
 - Step P17 Apply the Pharmacy Mandates Adjustment
 - Step P18 Calculate and Apply Utilization Dampening Adjustment
- PB. Determine the Final Pharmacy PMPM for each individual.

Step P19 - Determine Final Pharmacy PMPM

PC. Aggregate individual per member per month claim costs.

Step P20 - Aggregate Individual Claim Costs

DETAILED FORMULAS:

The following formulas detail the claim cost calculation process. The specific steps are applied to each cost category, except as specific noted that there are no separate provisions made for OON pharmacy benefits. All benefits are assumed to be in network. Claim costs f calculated separately and the results are aggregated. Where noted, a separate set of assumptions or calculations are used for cases rules are aggregated.

SECTION PA

Step P1 - Extract the Average Wholesale Price per Script

Extract the AWP per script by cost category in both the retail and mail order (MOD) buckets (note: separate assumptions for FACETS pla by Formulary Status (Closed vs. Open) and Formulary Type (Standard, Peformance, Advantage, Generics Only).

Step P2 - Apply the Discount

Discounts are estimated for retail and mail. The discounts vary by funding type. Discounts also differ for the FACETS platform, which ha its 90-day retail option. If applicable, discounts are adjusted for 90-day retail option.

Formula:

Final Retail Tier Discount = 30-Day Retail Discount x (1 - % of Retail from 90-Day) + 90-Day Retail Discount x % of Retail from 90-Day where % of Retail from 90-Day = [(Retail Script Counts x Retail shift to 90-Day Supply) + (MOD Script Counts x MOD Shift to 90-Day S MOD Multiplier Assumption)] / Retail Script counts

If selecting Performance 4-Tier product, where non-preventive generics and preferred brand share the second tier, one needs to calcul discount to use.

Formula:

Performance 4-Tier Product, 2nd Tier Discount for Retail or MOD =

- 1 {[(Non-Preventive Generics Script Counts x Non-Preventive Generics AWP) x (1 Generic Discount) + (Preferred Brand Script Count
- (1 Preferred Brand Discount)] / [(Non-Preventive Generics Script Counts x Non-Preventive Generics AWP) + (Preferred Brand Script (

Once discount is calculated, apply it to Average AWP.

<u>Formula</u>:

Step P2 Discounted AWP = (1 - Discount Factor) x Step P1 Average AWP

Step P3 - Calculate Gross Cost Per Script

Dispensing fees are estimated for retail and mail. They vary by funding type and differ for the FACETS platform. For mail, dispensing fee generic drugs. For retail, they do.

Sales tax is not included in either for retail or mail due to insignificance.

Formula:

Step P3 Gross Cost Per Script = Step P2 Discounted AWP + Dispensing Fee

Step P4 - Calculate and Apply the Cost Trend Factor

Determine the total trend days from the base claim period midpoint to the policy period midpoint. Calculate the trend years by exposu trend. Use trend values specific to the particular product being priced. Trend values will also vary by year.

Unit Cost Trend Factor is the sumproduct of days to trend in specific years with those years' corresponding trend factors.

Trend Calculation Example:

- (a) = Product = CignaPharmacy
- (b) = Base claim effective date = 1/1/2012
- (c) = Policy effective date of quote = 7/1/2013
- (d) = Policy end date of quote = 6/30/2014
- (e) = Annual CignaPharmacy cost trend factor for 2013/2012 = 6.22%
- (f) = Annual CignaPharmacy cost trend factor for 2014/2013 = 8.09%
- (g) = Base claim period midpoint = b + 182.5 days = 7/1/2012
- (h) = Policy period midpoint = $(c + d) / 2 = \frac{12}{30} / 2013$
- (i) = Total trend days = h g = 546.5
- (j) = Trend days from 2012 to 2013 = 364.5
- (k) = Trend days from 2013 to 2014 = 182

Unit Cost Trend Factor = (1 + e) ^ (j / 366) x (1 + f) ^ (k / 365) = (1.0622 ^ 0.999) x (1.0809 ^ 0.499) = 1.1041

<u>Formula</u>:

Step P4 Gross Trended Cost per Script = Step P3 Gross Cost per Script x Unit Cost Trend Factor

Step P5 - Extract the Script Counts Across All Drug Categories
