Re: MVP Health Plan, Inc.

2024 Vermont Exchange Rate Filing – Individual

SERFF Tracking #: MVPH-133660955

Objection #11

Dear Mr. Pontiff:

The following additional information is required for this filing.

Notice regarding proper responses:

- A minimum-acceptable response to quantitative questions from us must include a spreadsheet calculation with retained formulas such that we can replicate the calculations therein.
- Explanatory responses are merely a supplement to the spreadsheet material and in of themselves will constitute a lack of response.

Questions:

1. Using this table of charge increases

		rease			
	Total	Inpatient	Outpatient	Professional	Commercial Charge Increase
Brattleboro					1.50%
Central VT					10.95%
Copley	15.0%	16.2%	16.2%	3.5%	
Gifford					8.60%
Grace Cottage					2.0%
Mt. Ascutney	5.1%	6.5%	6.5%	3.5%	
North Country	4.5%	5.0%	5.0%	0.0%	
Northeastern VT	15.0%	16.8%	16.8%	0.0%	
Northwestern	6.0%	7.1%	7.1%	0.0%	
Porter					6.86%
Rutland	5.6%	4.4%	8.8%	0.0%	
Southwestern VT					3.87%
Springfield	7.1%	1.8%	8.4%	7.7%	
University of VT					13.45%

Please disclose and provide quantitative support for the impact to the rates if: The unit cost trend was set equal to the charge increases in the table.

To ensure that the review of your filing is completed before statutory deadlines, we expect you to respond as expeditiously as possible, but no later than July 27, 2023.

We trust that you understand these forms may not be used in Vermont until they are formally approved by the GMCB.

Sincerely,

Traci Hughes, FSA, MAAA

Objection #10

Dear Mr. Pontiff:

The following additional information is required for this filing.

Notice regarding proper responses:

- A minimum-acceptable response to quantitative questions from us must include a spreadsheet calculation with retained formulas such that we can replicate the calculations therein.
- Explanatory responses are merely a supplement to the spreadsheet material and in of themselves will constitute a lack of response.

Questions:

- 1. Please disclose and provide detailed quantitative and qualitative support for the impact of L&E's recommended CSR loads:
 - a. To the silver plans vs. all other plans, with no other assumption changes
 - b. To the silver plans vs. all other plans, with other assumption changes
- 2. Please disclose, justify, and provide detailed quantitative and qualitative support for any other assumption changes made as a result of L&E recommended CSR loads.
- 3. Please provide a full rate sheet that reflects rates with the changes that L&E recommended for CSR loads, and associated assumption changes due to the CSR load changes, only (i.e., not reflecting any other L&E recommended changes for hospital budgets, risk adjustment, etc.).

To ensure that the review of your filing is completed before statutory deadlines, we expect you to respond as expeditiously as possible, but no later than July 24, 2023.

We trust that you understand these forms may not be used in Vermont until they are formally approved by the GMCB.

Objection #8

Dear Mr. Pontiff:

The following additional information is required for this filing.

Notice regarding proper responses:

- A minimum-acceptable response to quantitative questions from us must include a spreadsheet calculation with retained formulas such that we can replicate the calculations therein.
- Explanatory responses are merely a supplement to the spreadsheet material and in of themselves will constitute a lack of response.

Questions:

- 1. Using the FY2023 budget submission narratives posted on the GMCB website (https://gmcboard.vermont.gov/FY2024hospitalbudgets), please disclose and provide quantitative support for the impact to the rates if:
 - a. The unit cost trend was set equal to the budget increases submitted.
 - b. The unit cost trend was set equal to the budget increases submitted, reduced by 17%.

To ensure that the review of your filing is completed before statutory deadlines, we expect you to respond as expeditiously as possible, but no later than July 12, 2023.

We trust that you understand these forms may not be used in Vermont until they are formally approved by the GMCB.

Objection #8

Dear Mr. Pontiff:

The following additional information is required for this filing.

Notice regarding proper responses:

- A minimum-acceptable response to quantitative questions from us must include a spreadsheet calculation with retained formulas such that we can replicate the calculations therein.
- Explanatory responses are merely a supplement to the spreadsheet material and in of themselves will constitute a lack of response.

Questions:

- 1. Regarding the response to question #3 in objection letter 5: Please also provide the monthly counts COVID-19 testing utilization.
- 2. Regarding the administrative costs, please address the following:
 - a. The actual administrative costs in 2022 were \$48.26 PMPM compared to the proposed \$52.74 PMPM for 2024. This is equivalent to a 4.5% average annual increase from 2022 to 2024. What are the driver(s) of the increase to administrative costs PMPM?
 - b. We observed the largest increase from 2022 to 2024 is attributed to the "All Other Admin" expense category. What is included in this category? Please elaborate further and discuss the larger increase to within this expense category.

To ensure that the review of your filing is completed before statutory deadlines, we expect you to respond as expeditiously as possible, but no later than June 29, 2023.

We trust that you understand these forms may not be used in Vermont until they are formally approved by the GMCB.

DELIVERED ELECTRONICALLY

June 22, 2023

Jackie Lee Vice President & Principal Lewis & Ellis, Inc.

Dear Ms. Lee:

To assist the Board with its review of MVP Health Plan, Inc.'s (MVP) 2024 individual and small group rate filings (Docket Nos. GMCB-004-23rr & GMCB-003-23rr), please ask MVP to provide the following information sought by the Office of the Health Care Advocate.

- 1. Please demonstrate the impact of "known contract changes" for 2023 and 2024 reflected in the Rx unit cost trends for these filings. Ind. Actuarial Mem. at 5: SG Actuarial Mem. at 5.
- 2. In responses to HCA Questions 3 and 4 dated June 27, 2022, in the dockets GMCB-005-22rr and 006-22rr, MVP stated that its contract with its current pharmacy benefit manager (PBM) runs through December 31, 2023. MVP also stated that its PBM contract has "annual market check provisions" that enable MVP to survey the market and negotiate contract enhancements. Please detail the outcome of any MVP "market check" MVP performed on its PBM in the last 12 months.
- 3. Please demonstrate the impact of any contract enhancements that MVP negotiated with its PBM in the last 12 months for the Vermont individual and small group books of business.
- 4. Regarding the passage of Vermont Act 131 (2022):
 - a. Did MVP evaluate whether its PBM has complied with the requirements of Act 131? If so, please provide an explanation of the manner in which this evaluation was completed. If not, explain why not.
 - b. Please explain the impact of Act 131's requirements on MVP's rates.
- 5. On page 35 of its January 15, 2023, report regarding PBMs,¹ the Department of Financial Regulation stated that, "read in a light most favorable to patients, the statutory language [if Act 131] suggests that Vermont health plans must apply copay assistance to patient deductibles." For policies subject to these rate filings, state whether MVP applied copay assistance to member deductibles.

¹ https://legislature.vermont.gov/assets/Legislative-Reports/DFR-Act-131-Report-on-PBMs.pdf

- 6. Please document the impact, if any, of allowing copay assistance to apply to member deductibles on these filings.
- 7. We note MVP's current RBC ratio is well above the level that would trigger regulatory action. Please provide support for the assertion that 1.5% CTR is required in these filings to maintain "statutory reserve requirement for MVP's VT block of business." Ind. Actuarial Mem. at 8; SG Actuarial Mem. at 8.
- 8. Describe MVP's negotiations with hospitals subject to GMCB regulation for FY2023. MVP's answer should identify any savings off the GMCB approved rates and quantify the impact of these savings on medical cost trend in these rate filings.
- 9. MVP selected the upper end of the range (\$130 ingredient, \$40 administration) for both ingredient cost and administration of the Covid vaccine, resulting in a \$2.29 PMPM Ind and \$2.32 PMPM SG charge. What would the PMPM be if the low end of the range (\$110 ingredient, \$25 administration) were selected?
- 10. Provide support for the increase in administrative costs from \$47.10 to \$52.74 PMPM Ind. and \$38.75 to \$44.62 PMPM SG.
- 11. Please quantify the impact of MVP's Quality Improvement/Cost Control programs, estimated cost of which is 6% to 7% of administrative expense. Ind. Actuarial Mem. at 8; SG Actuarial Mem. at 8.

Sincerely,

/s/ Michael Barber

Re: MVP Health Plan, Inc.

2024 Vermont Exchange Rate Filing – Individual

SERFF Tracking #: MVPH-133660955

Objection #5

Dear Mr. Pontiff:

The following additional information is required for this filing.

Notice regarding proper responses:

- A minimum-acceptable response to quantitative questions from us must include a spreadsheet calculation with retained formulas such that we can replicate the calculations therein.
- Explanatory responses are merely a supplement to the spreadsheet material and in of themselves will constitute a lack of response.

Questions:

- 1. Regarding the response to question #2 in objection letter 3: If the changes to Exhibit 2a decrease the rate change to 12.58% within the pricing file, but there are no changes to the URRT, the URRT will still indicate the rate changes of 12.76% and the two will not match. As a result of the initial changes, anything else within the pricing file or URRT be affected, such as leveraging or the paid-to-allowed ratio in the pricing file or the AV/CS in Wksh 2 of the URRT? The two files will need to show the same rate change. Please reconcile.
- 2. MVP assumes that the cost of the COVID-19 vaccine in 2024 will be \$130, which is the high end of the \$110 to \$130 range from the KFF publication referenced in the actuarial memorandum. Please further explain the choice to assume a \$130 cost per vaccine, instead of, for example, the midpoint of \$120.
- 3. Please provide the number of COVID-19 treatments and visits, separately, for each month from January 2021 through May 2023 (or the most recent month available).
- 4. A recent study by NORC at the University of Chicago (https://www.ahip.org/resources/medicaid-redetermination-coverage-transitions) estimated that 8.1% of those losing Medicaid coverage in VT will purchase an individual plan. Of that 8.1%, 2.6% will be direct purchase, 4.2% will be subsidized marketplace, and 1.3% will be unsubsidized marketplace. Please further justify MVP's choice to assume no membership shift, specifically into Silver and Silver CSR plans, as a result of the Medicaid redeterminations, while taking this study into consideration.

- 5. Please explain why MVP is not assuming any membership shift into Bronze plans as a result of the new CSR guidance for 2024.
- 6. Please explain why MVP expects no members to see value in moving from a Silver CSR plan to the lowest Gold plan as result of the new CSR guidance for 2024.

To ensure that the review of your filing is completed before statutory deadlines, we expect you to respond as expeditiously as possible, but no later than June 20, 2023.

We trust that you understand these forms may not be used in Vermont until they are formally approved by the GMCB.

In re:	MVP Health Plan, Inc.)	GMCB-005-23rr
	2024 Small Group Market Rate Filing)	SERFF No. MVPH-133660956

Dear Mr. Karnedy and Mr. Long,

The Green Mountain Care Board hereby requests that MVP Health Plan, Inc. (MVP) provide the following information to assist with the Board's review of the above-referenced filings. Please provide responses to all questions by June 21, 2023.

- 1. In our decision last year, MVP was ordered to include "detailed information on the efforts it has taken to encourage enrollment through VHC and the effectiveness of these efforts" in its 2024 individual rate filing. Provide this information.
- 2. Provide MVP's 2022 Supplemental Health Care Exhibit.
- 3. For the most recent year for which data are available (please specify), provide the dollar value of payments and the percentages of payments made by MVP under each alternative payment model category below across MVP's individual and small group plans and identify the relevant program or payment arrangement(s).

(YEAI	(YEAR)						
HCP-LAN Category	\$ value	% of total					
Category 1: FFS-No link to Quality							
1: FFS-No link to Quality & Value							
Category 2: FFS-Link to Quality a							
2A: Foundational payments for infrastructure & operations							
2B: Pay for reporting							
2C: Pay for performance							
Category 3: APMs Built on FFS A							
3A: APMs with shared savings							

3B: APMs with shared savings and downside risk		
3N: Risk based payments NOT linked to quality		
Category 4: Population-Based Pa	yment	
4A: Condition-specific population-based payment		
4B: Comprehensive population-based payment		
4B with reconciliation to FFS and ultimate accountability for TCOC		
4B with NO reconciliation to FFS		
4C: Integrated finance & delivery system		
4N: Capitated payments NOT linked to quality		

- 4. Explain whether MVP observed an increase in cancellations or shifts in enrollment by metal level due to the high premium increases in 2023.
- 5. Describe how MVP prospectively assesses its solvency and explain how the projected contribution to surplus from each filing and MVP's prospective assessment of solvency would be impacted if the rates were reduced by 1%, 2%, 3%, 4%, and 5% (assuming no corresponding decrease in costs).
- 6. The Board is interested in better understanding how MVP reimburses non-hospital-affiliated providers in its service area and what MVP has assumed in the filings regarding reimbursement increases for these providers. To that end, please
 - a. Describe the mechanisms by which MVP reimburses non-hospital-affiliated providers. For example, does MVP use fee schedules? If so, how many fee schedules does MVP maintain and what types of services or providers does each apply to?
 - b. Describe the magnitude and timing of any reimbursement increases for non-hospital-affiliated providers expected between now and the end of 2024, identify where in the filing these increases are reflected, and explain whether the increases will be across-the-board or targeted to certain providers or codes.
 - c. How does MVP define each provider type and how does this definition relate to the "professional" premium category of the URRT?
- 7. Explain how, if at all, MVP assesses the equity and sufficiency of payments across care settings.
- 8. The Board is interested in understanding how charge increases allowed in the individual and small group filings compare to actual charge increases implemented by MVP. To that end, please provide, in a table format for each year since 2014:

- a. The charge increases for non-hospital-affiliated providers allowed in MVP's individual and small group filings and the actual increases implemented by MVP. Explain any variances.
- b. The charge increases for hospitals allowed in the rate filing and the actual increases implemented by MVP. Explain any variances.

Sincerely,

s/ Michael Barber

Objection Letter Date 06/05/2023
Submitted Date 06/05/2023
Respond By Date 06/12/2023

Dear Christopher Pontiff,

Introduction:

Please see the attached letter.

Conclusion:

June 5, 2023

Christopher Pontiff MVP Health Plan, Inc. 625 State Street Schenectady, NY 12305

Re: MVP Health Plan, Inc.

2024 Vermont Exchange Rate Filing – Individual

SERFF Tracking #: MVPH-133660955

Objection #3

Dear Mr. Pontiff:

The following additional information is required for this filing.

Notice regarding proper responses:

- A minimum-acceptable response to quantitative questions from us must include a spreadsheet calculation with retained formulas such that we can replicate the calculations therein.
- Explanatory responses are merely a supplement to the spreadsheet material and in of themselves will constitute a lack of response.

Questions:

- 1. Regarding question #4 in Objection Letter 2: What were the primary driver(s) of the higher Rx trends in 2020-2021 and, separately, 2021-2022?
- 2. Regarding question #5 in Objection Letter 2: Please elaborate on exactly what corrections need to be made to Exhibit 2a and the URRT. Further, please disclose any impact this has on the proposed rates.
- 3. Regarding Line 13 in question #12 in Objection Letter 2:
 - a. Why wasn't a utilization reduction assumption applied to treatment and visits due to the removal of waived cost sharing, as was done for testing?
 - b. The table provided, "Adjustments to Make to Experience Period Data due to Vaccines" indicates 165,128 member months. Please also provide the number of distinct members and the number of distinct COVID-19 vaccine utilizing members.
- 4. Regarding question #14 in Objection Letter 2: Membership shifts for 2020 to 2021 and 2021 to 2022 were provided. Please also provide the membership shift between metal levels for 2022 to 2023, using the current enrollment distribution.

- 5. Regarding question #18 in Objection Letter 2: Please provide a similar breakdown of the general administrative load for actual 2022 expenses.
- 6. The Federal Act Memo states that there is a +0.05% allowed claim cost impact for plan design changes related to the impact of hearing aids as EHB. However, the "Plan Design Changes" adjustment factor in the URRT is 1.000. Please confirm that this is due to URRT rounding.
- 7. Regarding the historical SHCE admin PMPM provided in the Actuarial Memorandum:
 - a. What were the driver(s) of the significant increase in administrative costs PMPM in 2021?
 - b. In the rate-year 2022 filing (filed in 2020), it was stated that in 2022 MVP would take on the billing and payment processing functions, resulting in an increase to the administrative costs PMPM. However, the actual 2022 administrative costs PMPM decreased by approximately \$3 PMPM. Please reconcile.
- 8. We are aware of an updated actuarial certification from Wakely for the 2024 Standard Plans due to IRS-release final H.S.A. limits for 2024. Please either confirm that the noted revisions are included in the submitted rate filing or list each revision and provide the calculation of the resulting rate impact. If the latter, do not provide fully revised documentation (URRT, Act Memo, Exhibits, etc.) at this time.

To ensure that the review of your filing is completed before statutory deadlines, we expect you to respond as expeditiously as possible, but no later than June 12, 2023.

We trust that you understand these forms may not be used in Vermont until they are formally approved by the GMCB.

Sincerely,

Traci Hughes, FSA, MAAA

2024 Vermont Exchange Rate Filing – Individual

SERFF Tracking #: MVPH-133660955

Objection #2

Dear Mr. Pontiff:

The following additional information is required for this filing.

Notice regarding proper responses:

- A minimum-acceptable response to quantitative questions from us must include a spreadsheet calculation with retained formulas such that we can replicate the calculations therein.
- Explanatory responses are merely a supplement to the spreadsheet material and in of themselves will constitute a lack of response.

Questions:

- 1. Please provide detailed quantitative and qualitative support for the 2023 & 2024 medical unit cost trend assumption separately for Vermont providers that are governed by the GMCB and all other providers. The support for the providers governed by GMCB should reconcile to the approved budget changes for FY23 (https://gmcboard.vermont.gov/node/3183), and include an explanation and support for any differences. The support for all other providers should include the data and any adjustments that were made to the data to determine the best estimate of unit cost changes.
- 2. We acknowledge the following from page 5 of the Actuarial Memorandum: "MVP analyzed historical medical utilization trends for its VT block of business and determined that the data has been too volatile in recent years to use for medical utilization trend purposes. MVP attributes this volatility to the significant membership growth for this block of business and COVID-19." Please provide the analysis of the historical medical utilization trends. This analysis should include quantitative and qualitative components.
- 3. Please provide quantitative and further qualitative support for the utilization, unit cost, and deductible leveraging Rx trends in Exhibit 2b.
- 4. Please provide the historical annual Rx trends observed from 2020-2022, as well as the actual-to-expected ratio for the Rx trend in each year.

- 5. The annualized trend using the first four service categories of the URRT is 8.8%, which is slightly different from the 8.9% shown in Exhibit 2a. Please reconcile.
- 6. Provide quantitative support for the 1.062 trend factor applied to the claims for the deductible in Exhibit 2a.
- 7. Please provide quantitative support for the Benefit Actuarial Value and Induced Demand reflected in Index Rate in Exhibit 6.
- 8. Please provide the national study performed by Wakely Consulting Group for the impact of the National High Cost Reinsurance Pool.
- 9. For each month from January 2021 through March 2023, please provide the total allowed costs, member months, and any normalization factors appropriate to normalize for changes in unit costs, population age factors, and induced utilization.
- 10. Please provide the bad debt as a percentage of premium for 2022.
- 11. As shown in the Experience Period Claims section of the Actuarial Memorandum, please provide qualitative and quantitative support for the increase in "Other Medical Expenses not in claim warehouse" and "Net Reinsurance Expense". Please elaborate on what is driving the increased amounts for these two items compared to last year's filing.
- 12. Please provide further qualitative and quantitative support for the adjustment on lines 11-16 of Exhibit 3. This should include a derivation of the calculated impact, disclosure of all assumptions made, as well as support and/or sources used as a basis for assumptions made.
- 13. Please provide the incurred and paid claims PMPM for COVID testing, COVID vaccinations, and COVID treatment costs, separately by incurral month from January 2022 through December 2022. Similarly, please provide the projected incurred and paid claims PMPM for COVID testing, COVID vaccinations, and COVID treatment costs for calendar year 2024.
- 14. We acknowledge the following from page 9 of the Actuarial Memorandum: "We studied the migration of silver CSR members to other plans over time. We also compared the premium relativities of other metal levels to silver as proposed and in prior years. Based on this information, we did not make a membership shift in response to the change in CSR loading." Please provide the study of silver CSR member migration. This analysis should include quantitative and qualitative components.
- 15. Please provide quantitative and qualitative support for the calculation of the CSR load applied to the 2024 proposed rates and elaborate on why the load varies by silver plan.
- 16. We acknowledge the following from page 10 of the Actuarial Memorandum: "MVP is aware that the Medicaid continuous enrollment provision will not continue in 2024. We have decided not to assume a membership or morbidity change for this. We expect the impact to be the same as the overall market wide morbidity impact which we do not have data to project or support."

Considering that most enrollees moving from Medicaid to ACA will be eligible for CSR plans, please justify the assumption that there will not be any Medicaid members electing silver CSR plans therefore shifting a greater portion of membership into silver CSR plans.

- 17. Please provide the average age factor for MVP's individual market for 2022 and 2023.
- 18. Please provide a breakdown of the assumed general administrative load of \$52.74 shown in Exhibit 5 by expense category.
- 19. Please provide the company's historical RBC ratio for a minimum of three years.
- 20. Please provide the historical actual to expected profit margin for a minimum of three years.

To ensure that the review of your filing is completed before statutory deadlines, we expect you to respond as expeditiously as possible, but no later than May 25, 2023.

We trust that you understand these forms may not be used in Vermont until they are formally approved by the GMCB.

Sincerely,

Traci Hughes, FSA, MAAA

2024 Vermont Exchange Rate Filing – Individual

SERFF Tracking #: MVPH-133660955

Objection #1

Dear Mr. Pontiff:

The following additional information is required for this filing.

Notice regarding proper responses:

- A minimum-acceptable response to quantitative questions from us must include a spreadsheet calculation with retained formulas such that we can replicate the calculations therein.
- Explanatory responses are merely a supplement to the spreadsheet material and in of themselves will constitute a lack of response.

Questions:

- 1. Please provide the 2022 RATEE report from CMS.
- 2. For each individual plan, provide the calculated benefit relativity and projected enrollment distribution by HIOS variant and presence of APTC.

To ensure that the review of your filing is completed before statutory deadlines, we expect you to respond as expeditiously as possible, but no later than May 18, 2023.

We trust that you understand these forms may not be used in Vermont until they are formally approved by the GMCB.

ACTUARIAL MEMORANDUM

2024 Vermont Individual Exchange Filing

General Information

This memorandum details the methods and assumptions underlying the proposed 2024 premium rates for the State of Vermont's individual ACA compliant market. These products will be issued by MVP Health Plan, Inc. (MVP), a non-profit subsidiary of MVP Health Care, Inc. The rate filing has been prepared to satisfy the requirements of 8 V.S.A §5104 as well as the requirements of the Federal ACA including 45 CFR Part 156, §156.80. The premium rates are effective between 1/1/2024 and 12/31/2024. There are no benefit plans being retired, nor are there any new benefit plans being added. MVP modified several of the benefits being offered, and the updated forms have been submitted in a separate SERFF filing. The proposed average rate increase (MVP's revenue increase) is 12.8%, with increases ranging from 7.7% to 15.5%.

Drivers of Rate Increase

The proposed premium rates reflect an increase over the prior rates due to single risk pool experience which is more adverse than assumed in the current rates, medical and pharmacy cost and utilization inflation, and an increase to contribution to reserve assumptions. Premium rate increases are varying by plan due to benefit modifications of several benefits being offered as well as the impact of fixed PMPM non-claim costs on premiums that vary based on benefit level.

Market/Benefits

All benefit plans included in this rate filing are available to everyone eligible to purchase coverage in the individual market. All Essential Health Benefits (EHBs) are covered. Only one EHB substitution was made as required by the Department of VHA, a substitution for the \$2,000 annual Private Duty Nursing benefit limit in the benchmark plan. MVP contracted Milliman to determine an actuarially equivalent visit limit, and the experience period data reflects this actuarially equivalent limit.

The non-standard plans proposed by MVP and included in this rate filing contain two benefits in excess of the EHBs: a wellness benefit and an acupuncture allowance of \$500. The wellness benefit and acupuncture allowance are included in all non-standard products and the wellness benefit is filed as a mandatory rider, form: FRVT366.

To inform consumers of the availability and details of the products included in this filing, MVP will provide community outreach support as well as offer web and print product content and other printed product materials for VT plans. MVP will also have a mass media presence to further educate health care customers in Vermont.

The book of business affected by this rate filing is 8,470 policyholders, 8,470 subscribers and 11,602 members based on February 2023 membership.

Experience Period Premium and Claims (Worksheet 1, Section 1 of Unified Rate Review Template)

Worksheet 1, Section 1 of the Unified Rate Review Template contains MVP Health Plan, Inc. Individual data for Vermont members over the time period 1/1/2022 - 12/31/2022, completed through 3/31/2023.

MVP does not project to rebate consumers for 2022 dates of service, and therefore no adjustments were made to the earned premium amount reflected on Worksheet 1, Section 1 of the Unified Rate Review Template. The earned premium shown reflects the amount of premium MVP collected from individuals over the experience period.

Allowed claim data includes claims from our fee for service (FFS) claim warehouses (medical and pharmacy) along with additional medical expenses not captured in the claim warehouse such as: payments associated with medical home, physician incentive payments, FFS write-offs and net reinsurance expenses.

An allowance for incurred but not reported paid claims (IBNR) was added to the experience period fee-for-service (FFS) medical claims. IBNR files were supplied directly from MVP's reserving actuary. MVP uses a combination PMPM and completion factor method to develop IBNR estimates, and Vermont specific data for the experience period was used to develop the factors. The fee-for-service experience period claims were reconciled with the IBNR lag triangles to ensure accuracy.

The Risk adjustment reflected in the experience period is for the merged market and includes High Cost Risk Pool recoveries per the URRT instructions.

A summary of experience period claims processed through MVP's claim system, experience period costs not processed through MVP's claims system, as well as an estimate of IBNR are summarized below for the claims shown in Worksheet I, Section I of the URRT.

	Allowed	Incurred
Claims Processed Through Claim System	\$113,346,364	\$96,410,157
Experience Period Costs Not Processed Through Claims System	\$2,780,903	\$2,780,903
IBNR	\$1,769,235	\$1,503,955
Total	\$117,896,502	\$100,695,015

Benefit Categories (Worksheet 1, Section 2 of Unified Rate Review Template)

MVP determines benefit category based on the type of claim form submitted in conjunction with the code and type of code attached to the claim form (i.e. ICD-9, ICD-10, Diagnosis Code, or HCPCS). The "Other Medical" category includes pediatric dental claims. The "Capitation" category includes capitated payments as well as all other claims not processed through MVP's claim warehouses.

Medical Trend Factors

The assumed unit cost trends reflect known and assumed price increases from MVP's provider network, weighted by benefit category. The Capitation unit cost trend reflects the expected change between the capitated and non-FFS claim expense between the experience period and the projection period.

MVP analyzed historical utilization patterns for the ACA-compliant business to determine whether there has been a utilization trend pattern in the recent past. Because of the rapid membership growth in this block in the past several years and COVID-19, the utilization trends produced by the model were not considered reliable. However, the regulatory actuary in the 2020 rate filing performed an analysis that found that "a reasonable range for market wide utilization trend to be 1% to 4%". MVP has maintained this same trend in the filing each year. Because MVP believes that their data still lacks necessary stability and L&E's view of utilization trend encompasses the entire market, MVP has built in a 1% annual utilization trend for this filing.

Rx Trend Factors

Annual allowed Rx trend factors split by generic, brand, and specialty drugs are provided by MVP's PBM and were determined using MVP specific data over the experience period by drug class. The forecast provided by MVP's PBM accounts for drugs coming off patent, changes in average wholesale price, new drugs being released to the market, and price competitiveness amongst generic and brand drug manufacturers.

Credibility Manual Rate Development (Worksheet 1, Section 2 of Unified Rate Review Template)

MVP is assuming that the individual market risk pool membership base of 165,128 member months in the experience period is fully credible for rating purposes. Therefore, the applied credibility percentage is 100.00% (0.00% weight on credibility manual).

<u>Projection Factors (Worksheet 1, Section 2 of Unified Rate Review Template)</u>

Morbidity Adjustment-Impact of COVID Testing

MVP is assuming a 10% reduction in Covid testing costs in the projection period due to a utilization decrease. We expect demand for testing to decrease once cost sharing is reinstituted. This factor is decreasing the experience period allowed claim cost by 0.04%.

Morbidity Adjustment- Impact of COVID Vaccines

It is expected commercial payers will have to pay the full ingredient cost of Covid vaccines by 2024. MVP is taking 2022 experience and increasing it by \$130/\$40, the expected ingredient cost in 2024 over what we pay currently¹. The factor is increasing the experience period allowed claim cost by 0.3%.

Plan Design Changes- Impact of Hearing Aids as EHB

Hearing aids have been added as an essential health benefit in 2024. MVP analyzed historical experience in its New York population and determined this mandate would increase the experience period allowed claim cost by 0.05%.

Other- Impact of Leap Year

Because the rating period is a leap year and the experience period is not a leap year, the rating period will have one more day than the experience period. Assuming claims are uniformly distributed among all days in the year, MVP is adjusting the experience period claim expense upward by 0.27% (366 days / 365 days).

Reinsurance (Worksheet 1, Section 2)

MVP is reflecting \$0.00 PMPM in reinsurance recoveries during the projection period.

Federal Risk Adjustment Program (Worksheet 1, Section 2)

Based on the Interim Risk Transfer results for 2022 provided by CMS, MVP is expected to pay \$13,309,301 into the individual market transfer pool for 2022. This is \$80.60 on a PMPM basis or 13.2% of experience period claims prior to market-wide adjustments.

The URRT instructions state that the projected risk adjustment PMPM on Worksheet 1 is to be calculated on an allowed basis. Therefore, MVP has taken the projected risk adjustment PMPM on a net basis and divided by the projection period paid to allowed ratio to come up with the value shown (\$124.62 PMPM).

Exchange User Fees (Worksheet 1, Section 2)

Vermont's Exchange is not a Federally-Facilitated Exchange, therefore 0.00% of premium is built in to account for user fees during the projection period.

Market-Wide Adjusted Index Rate

The experience period index rate of \$713.97 is equal to the individual market allowed claim data for the time period, 1/1/2022 - 12/31/2022, completed through 3/31/2023.

 $^{^{1}\} https://www.kff.org/coronavirus-covid-19/issue-brief/how-much-could-covid-19-vaccines-cost-the-u-s-after-commercialization/$

The actual market adjusted index rate for the projection period equals \$972.17. However, due to the rounding of factors present in the URRT, the value in the file reflects \$972.41. This value was computed by adjusting the projection period index rate for the federal risk adjustment program, reinsurance and marketplace user fees. Please see above for details on the computation of the projected value of the risk adjustment program. Note that this is a true expectation of allowed costs and is not equivalent to the adjusted claim cost for pricing on Exhibit 7 of the rate filing.

<u>Actuarial Values and Cost Sharing Design of Plan (Worksheet 2, Section 3)</u>

The AV Metal Level for each plan was determined using the Federally prescribed Actuarial Value Calculator. Adjustments for aggregate deductibles, the VT Rx OOPM, and safe harbor prescription Rx benefits were made to the calculator results for the non-standard Gold 3 and non-Standard Silver 2 plans. The actuarial certification of these adjustments has been included.

The Benefit Actuarial Value for each plan was determined using MVP's in-house benefit pricing tools. The pricing tools value the expected net paid claim cost associated with unique benefit plan designs from a starting single risk pool allowed amount. The AV is the ratio of the expected paid to allowed amount for each plan design. MVP did not reflect any induced utilization in the projection of the net paid amounts for each unique benefit plan.

The induced utilization factors used to set premium rates and compute the average in-force induced utilization factor are the HHS prescribed induced utilization factors of 1.00 for Bronze, 1.03 for Silver, 1.08 for Gold, and 1.15 for Platinum.

The actual paid to allowed ratio during the experience period and the assumed paid to allowed ratio used for pricing differ. The actual paid to allowed ratio (including assumed payments for cost sharing reductions) for the experience period is different than the pricing paid to allowed ratio produced by MVP's internal benefit relativity model. Because MVP prices using net claim expense instead of allowed claims, the allowed claims in the URRT need to be adjusted for the difference in the paid to allowed ratios to develop an equivalent Plan Adjusted Index Rate. The total of this adjustment is 9.8%.

The total adjustment made is the product of the three values (AV, induced demand, and difference in paid to allowed ratio).

Provider Network Adjustment (Worksheet 2, Section 3)

MVP only offers one provider network for its Vermont plans; therefore, no plan-level adjustment is necessary.

Benefits in Addition to EHB (Worksheet 2, Section 3)

Members purchasing a non-standard plan will receive MVP's Member Wellness Incentive (Form: FRVT366) and a \$500 acupuncture allowance. The wellness benefit provides subscribers with up to \$600 in wellness rewards per year, subject to certain guidelines. The cost of these benefits is included in the experience period claims as well as the plan AVs so an adjustment is not required.

Catastrophic Plan Adjustment (Worksheet 2, Section 3)

An additional plan level adjustment was applied to the catastrophic plan to account for the unique age eligibility requirements as permitted by the Federal ACA Rules. MVP did not reflect the fact that individuals facing financial hardship could also qualify to enroll in this plan.

MVP determined the adjustment factor for this plan by calculating the HHS Age factor for the eligible population and comparing it to the HHS Age factor of the experience period membership. The eligible population was assumed to be any member under the age of 30 that was not attached to a subscriber age 30 or older. It was assumed that a member

under the age of 30 and attached to a subscriber age 30 or older would enroll as a dependent in a non-catastrophic plan. The eligibility adjustment factor is equal to 0.581.

Catastrophic Plan Level Adjustment	
	HHS Age Factor
Ages 0-29, Meeting Subscriber Qualifications	1.051
Single Risk Pool Total	1.809
Catastrophic Adjustment	0.581

Non-Claim Expense Plan Level Adjustments

Non claim expenses include both percent of premium loads and PMPM loads. The loads do not vary by plan. Each Standard and Non-Standard plan is being loaded with the same PMPM and Percent of Premium loads. The loads are outlined below:

Federal Taxes PMPM based

A total of \$0.46 PMPM is added for fees MVP must pay to the Federal Government per ACA regulations on a PMPM basis. This is comprised of \$0.21 PMPM for the risk adjustment user fee levied by the Department of Health and Human Services and \$0.25 PMPM for the Patient Centered Outcome Research Fee.

State Taxes PMPM Based

\$2.37 PMPM is added for fees MVP must pay to the State of Vermont to help fund expenses incurred by state agencies and other non-profit organizations on MVP's behalf, including the Green Mountain Care Board, the Vermont Program for Quality in Health Care, Inc., and the Office of the Health Care Advocate. This is found by using the best available information about the market-wide cost of each of the programs and then accounting for MVP's market share from 2022 to 2024.

State Taxes Premium based – VT Vaccine Assessment

Based on information provided by the Vermont Vaccine Purchasing Program (VVPP), MVP's rates are \$13.54 per covered child and \$2.74 per covered adult for 2024, followed by an estimate of \$15.05 per covered child and \$3.00 per covered adult for 2025. Based on a blend of MVP's child and adult membership in the projection period, the total PMPM costs were determined for each year and given an equal weight, resulting in \$3.44 PMPM. This blended PMPM was then compared to the projection period premium PMPM before the assessment load to convert the assessment to a percent of premium load of 0.38%.

Federal Fees Premium based – National High Cost Reinsurance Pool (HCRP) Charge

In the 2024 Notice of Benefit and Payment Parameters issued by HHS, carriers will be compensated 60% for members' paid claims above \$1 million in a given plan year. The total reinsurance received across all states will be aggregated and compared to the national average premium PMPM to determine a percentage of premium charged to each issuer to fund the program.

Based on a national study performed by Wakely Consulting Group, the estimate of the load charged to individual market issuers in 2024 will be 0.55%.

General Administrative Expense Load (Including QI component)

The total administrative expense load included as a plan level adjustment equals \$52.74 PMPM and is used to cover SG&A expenses as well as Quality Improvement/Cost Containment Programs (QI). Based on an analysis of MVP's historical Supplemental Health Care Exhibit (SHCE) expenses, approximately 6% of MVP's total administrative expense was spent on QI. Therefore, \$3.16 PMPM of the \$52.74 PMPM administrative expense is attributable to QI.

The following table summarizes the administrative expenses for small group and individual lines of business from the 2020, 2021, and 2022 SHCEs compared to the available admin expense built into the rates for the same time period.

Combined VT AR42 and AR44	Year	Exchange Available Admin PMPM	SHCE Admin PMPM*
Individual	2020	N/A	\$35.40
Small Group	2020	N/A	\$33.65
Combined	2020	\$42.00	\$34.40
Individual	2021	N/A	\$51.71
Small Group	2021	N/A	\$44.49
Combined	2021	\$43.75	\$47.44
Individual	2022	\$47.10	\$48.26
Small Group	2022	\$38.75	\$39.63
Combined	2022	\$42.20	\$43.07

*Reflects lines 1.07, 6.6, 8.3, 10.1, and 10.4 of SHCE, Part 1

Contribution to Reserves/Risk Charge

MVP is building a 1.5% contribution to reserves/risk charge into the VT Exchange premium rates for 2024. This charge is added to premium rates to meet statutory reserve requirements for MVP's VT block of business and protect against adverse experience relative to pricing assumptions.

Bad Debt Expense

A plan level adjustment equal to 0.30% of premium was added to account for non-payment of premium risk.

Age/Geographic/Tobacco Calibration (Worksheet 2, Section 3)

Per Vermont stating rating rules, variation in rates due to tobacco and age are not allowed. Therefore, all calibration factors are 1. Additionally, there is only 1 rating region in Vermont, so the geography calibration is also 1.

Consumer Adjusted Premium Rates

The Calibrated Plan Adjusted Index Rate PMPMs are converted to per contract premium rates using the computed single conversion factor and the prescribed standard load ratios. Please note that due to the rounding present in the URRT template, actual Plan Adjusted Index Rate PMPMs may vary from the URRT to the actual rates as filed.

The single conversion factor (SCF) was calculated using subscriber and member data by contract type for the eligible population enrolled with MVP as of February 2023. The SCF = weighted average contract size / weighted average load ratio.

Projection Period Membership

MVP's projection period membership equals the February 2023 enrollment of the population eligible to purchase these products, or 11,602 members. On Worksheet 2 of the URRT, members are mapped based on their February 2023 benefit to the same benefits for 2024.

MVP is aware that the Medicaid continuous enrollment provision will not continue in 2024. We have decided not to assume a membership or morbidity change for this. We expect the impact to be the same as the overall market wide morbidity impact which we do not have data to support.

Guidance on loading for silver plans was implemented by the Green Mountain Care Board starting in 2024. Based on this, MVP has calculated pricing AVs for on-exchange silver plans using the weighted average benefit richness of silver members, inclusive of the CSR-adjusted benefits. Our current proposed relativities do not indicate there is a further

incentive for members to move to a different metal level. We studied the migration of silver CSR members to other plans over time. We also compared the premium relativities of other metal levels to silver as proposed and in prior years. Based on this information, we did not make a membership shift in response to the change in CSR loading.

Loss Ratio Information

The traditional target loss ratio (claims cost / premium) for the rates proposed in this rate filing is 91.2%. After adjusting for taxes/assessments and expenses associated with quality improvements, the Federal target loss ratio for the rates proposed in this filing is 92.7%. Please see the following table for a calculation of these loss ratios based on MVP's projected starting claim cost in 2024:

Target Loss Ratio for 2024 VT Exchange			
A) Claims Expense	\$831.86		
B) Taxes/Assessments	\$11.31		
C) Quality Improvement	\$3.16		
D) Premium	\$912.33		
E) Traditional Loss Ratio	91.2%		
= A) / D)			
F) Federal Loss Ratio	92.7%		
= [A) + C)] / [D) - B)]			

Actuarial Certification

I, Christopher Pontiff, am a Fellow of the Society of Actuaries and a Member of the American Academy of Actuaries. The projected Index Rate and Adjusted Paid Amount used in the development of these proposed premium rates is in compliance with all applicable State and Federal Statutes and Regulations (45 CFR 156.80(d)(1)) and developed in compliance with the applicable Actuarial Standards of Practice. I have examined the assumptions and methods used in determining MVP's requested rates. Based on my review and examination, it is my opinion that the proposed premium rates are reasonable in relation to the benefits provided and that they are not excessive, nor inadequate, nor unfairly discriminatory. They are developed using only the permitted rating classifications. The Adjusted Paid Amount and only the allowable modifiers as described in 45 CFR 156.80(d)(1) and 45 CFR 156.80(d)(2) were used to generate plan level rates. The Standard AV Calculator was used to determine the Metal AV Value to be shown in Worksheet 2 of the Part I Unified Rate Review template for all the plans. The EHB portion of premium reflected in Worksheet 2, Sections 3 and 4 was calculated in accordance with actuarial standards of practice.

The URRT does not demonstrate the process that was used to develop premium rates. Rather it represents information required by Federal regulation to be provided in support of the review of rate increases and for certification that the Index rate is developed in accordance with Federal regulation and used consistently and only adjusted by the allowable modifiers.

I certify that I am knowledgeable as to the Vermont laws and regulations that apply to this filing and that, to the best of my knowledge and belief, this filing is in compliance with such laws and regulations and provides all required benefits.

I am of the opinion that this filing is in compliance with the applicable Federal and State Laws and Regulations concerning the PPACA and the HCERA of 2010.

I certify that each rate filing has been prepared in accordance with the following Actuarial Standards of Practice; ASOP #5, ASOP#8, ASOP #12, ASOP #23, ASOP #25, ASOP#41, ASOP#45, and ASOP#50.

ACTUARIAL MEMORANDUM

2024 Vermont Individual Exchange Filing

General Information

This memorandum details the methods and assumptions underlying the proposed 2024 premium rates for the State of Vermont's individual ACA compliant market. These products will be issued by MVP Health Plan, Inc. (MVP), a non-profit subsidiary of MVP Health Care, Inc. The rate filing has been prepared to satisfy the requirements of 8 V.S.A §5104 as well as the requirements of the Federal ACA including 45 CFR Part 156, §156.80. The premium rates are effective between 1/1/2024 and 12/31/2024. There are no benefit plans being retired, nor are there any new benefit plans being added. MVP modified several of the benefits being offered, and the updated forms have been submitted in a separate SERFF filing. The proposed average rate increase (MVP's revenue increase) is 12.8%, with increases ranging from 7.7% to 15.5%.

Drivers of Rate Increase

The proposed premium rates reflect an increase over the prior rates due to single risk pool experience which is more adverse than assumed in the current rates, medical and pharmacy cost and utilization inflation, and an increase to contribution to reserve assumptions. Premium rate increases are varying by plan due to benefit modifications of several benefits being offered as well as the impact of fixed PMPM non-claim costs on premiums that vary based on benefit level.

Market/Benefits

All benefit plans included in this rate filing are available to everyone eligible to purchase coverage in the individual market. All Essential Health Benefits (EHBs) are covered. Only one EHB substitution was made as required by the Department of VHA, a substitution for the \$2,000 annual Private Duty Nursing benefit limit in the benchmark plan. MVP contracted Milliman to determine an actuarially equivalent visit limit, and the experience period data reflects this actuarially equivalent limit.

The non-standard plans proposed by MVP and included in this rate filing contain two benefits in excess of the EHBs: a wellness benefit and an acupuncture allowance of \$500. The wellness benefit and acupuncture allowance are included in all non-standard products and the wellness benefit is filed as a mandatory rider, form: FRVT366.

To inform consumers of the availability and details of the products included in this filing, MVP will provide community outreach support as well as offer web and print product content and other printed product materials for VT plans. MVP will also have a mass media presence to further educate health care customers in Vermont.

The book of business affected by this rate filing is 8,470 policyholders, 8,470 subscribers and 11,602 members based on February 2023 membership.

Experience Period Premium and Claims (Worksheet 1, Section 1 of Unified Rate Review Template)

Worksheet 1, Section 1 of the Unified Rate Review Template contains MVP Health Plan, Inc. Individual data for Vermont members over the time period 1/1/2022 - 12/31/2022, completed through 3/31/2023.

MVP does not project to rebate consumers for 2022 dates of service, and therefore no adjustments were made to the earned premium amount reflected on Worksheet 1, Section 1 of the Unified Rate Review Template. The earned premium shown reflects the amount of premium MVP collected from individuals over the experience period.

Allowed claim data includes claims from our fee for service (FFS) claim warehouses (medical and pharmacy) along with additional medical expenses not captured in the claim warehouse such as: payments associated with medical home, physician incentive payments, FFS write-offs and net reinsurance expenses.

An allowance for incurred but not reported paid claims (IBNR) was added to the experience period fee-for-service (FFS) medical claims. IBNR files were supplied directly from MVP's reserving actuary. MVP uses a combination PMPM and completion factor method to develop IBNR estimates, and Vermont specific data for the experience period was used to develop the factors. The fee-for-service experience period claims were reconciled with the IBNR lag triangles to ensure accuracy.

The Risk adjustment reflected in the experience period is for the merged market and includes High Cost Risk Pool recoveries per the URRT instructions.

A summary of experience period claims processed through MVP's claim system, experience period costs not processed through MVP's claims system, as well as an estimate of IBNR are summarized below for the claims shown in Worksheet I, Section I of the URRT.

	Allowed	Incurred
Claims Processed Through Claim System	\$113,346,364	\$96,410,157
Experience Period Costs Not Processed Through Claims System	\$2,780,903	\$2,780,903
IBNR	\$1,769,235	\$1,503,955
Total	\$117,896,502	\$100,695,015

Benefit Categories (Worksheet 1, Section 2 of Unified Rate Review Template)

MVP determines benefit category based on the type of claim form submitted in conjunction with the code and type of code attached to the claim form (i.e. ICD-9, ICD-10, Diagnosis Code, or HCPCS). The "Other Medical" category includes pediatric dental claims. The "Capitation" category includes capitated payments as well as all other claims not processed through MVP's claim warehouses.

Medical Trend Factors

The assumed unit cost trends reflect known and assumed price increases from MVP's provider network, weighted by benefit category. The Capitation unit cost trend reflects the expected change between the capitated and non-FFS claim expense between the experience period and the projection period.

MVP analyzed historical utilization patterns for the ACA-compliant business to determine whether there has been a utilization trend pattern in the recent past. Because of the rapid membership growth in this block in the past several years and COVID-19, the utilization trends produced by the model were not considered reliable. However, the regulatory actuary in the 2020 rate filing performed an analysis that found that "a reasonable range for market wide utilization trend to be 1% to 4%". MVP has maintained this same trend in the filing each year. Because MVP believes that their data still lacks necessary stability and L&E's view of utilization trend encompasses the entire market, MVP has built in a 1% annual utilization trend for this filing.

Rx Trend Factors

Annual allowed Rx trend factors split by generic, brand, and specialty drugs are provided by MVP's PBM and were determined using MVP specific data over the experience period by drug class. The forecast provided by MVP's PBM accounts for drugs coming off patent, changes in average wholesale price, new drugs being released to the market, and price competitiveness amongst generic and brand drug manufacturers.

Credibility Manual Rate Development (Worksheet 1, Section 2 of Unified Rate Review Template)

MVP is assuming that the individual market risk pool membership base of 165,128 member months in the experience period is fully credible for rating purposes. Therefore, the applied credibility percentage is 100.00% (0.00% weight on credibility manual).

<u>Projection Factors (Worksheet 1, Section 2 of Unified Rate Review Template)</u>

Morbidity Adjustment-Impact of COVID Testing

MVP is assuming a 10% reduction in Covid testing costs in the projection period due to a utilization decrease. We expect demand for testing to decrease once cost sharing is reinstituted. This factor is decreasing the experience period allowed claim cost by 0.04%.

Morbidity Adjustment- Impact of COVID Vaccines

It is expected commercial payers will have to pay the full ingredient cost of Covid vaccines by 2024. MVP is taking 2022 experience and increasing it by \$130/\$40, the expected ingredient cost in 2024 over what we pay currently¹. The factor is increasing the experience period allowed claim cost by 0.3%.

Plan Design Changes- Impact of Hearing Aids as EHB

Hearing aids have been added as an essential health benefit in 2024. MVP analyzed historical experience in its New York population and determined this mandate would increase the experience period allowed claim cost by 0.05%.

Other- Impact of Leap Year

Because the rating period is a leap year and the experience period is not a leap year, the rating period will have one more day than the experience period. Assuming claims are uniformly distributed among all days in the year, MVP is adjusting the experience period claim expense upward by 0.27% (366 days / 365 days).

Reinsurance (Worksheet 1, Section 2)

MVP is reflecting \$0.00 PMPM in reinsurance recoveries during the projection period.

Federal Risk Adjustment Program (Worksheet 1, Section 2)

Based on the Interim Risk Transfer results for 2022 provided by CMS, MVP is expected to pay \$13,309,301 into the individual market transfer pool for 2022. This is \$80.60 on a PMPM basis or 13.2% of experience period claims prior to market-wide adjustments.

The URRT instructions state that the projected risk adjustment PMPM on Worksheet 1 is to be calculated on an allowed basis. Therefore, MVP has taken the projected risk adjustment PMPM on a net basis and divided by the projection period paid to allowed ratio to come up with the value shown (\$124.62 PMPM).

Exchange User Fees (Worksheet 1, Section 2)

Vermont's Exchange is not a Federally-Facilitated Exchange, therefore 0.00% of premium is built in to account for user fees during the projection period.

Market-Wide Adjusted Index Rate

The experience period index rate of \$713.97 is equal to the individual market allowed claim data for the time period, 1/1/2022 - 12/31/2022, completed through 3/31/2023.

 $^{^{1}\} https://www.kff.org/coronavirus-covid-19/issue-brief/how-much-could-covid-19-vaccines-cost-the-u-s-after-commercialization/$

The actual market adjusted index rate for the projection period equals \$972.17. However, due to the rounding of factors present in the URRT, the value in the file reflects \$972.41. This value was computed by adjusting the projection period index rate for the federal risk adjustment program, reinsurance and marketplace user fees. Please see above for details on the computation of the projected value of the risk adjustment program. Note that this is a true expectation of allowed costs and is not equivalent to the adjusted claim cost for pricing on Exhibit 7 of the rate filing.

<u>Actuarial Values and Cost Sharing Design of Plan (Worksheet 2, Section 3)</u>

The AV Metal Level for each plan was determined using the Federally prescribed Actuarial Value Calculator. Adjustments for aggregate deductibles, the VT Rx OOPM, and safe harbor prescription Rx benefits were made to the calculator results for the non-standard Gold 3 and non-Standard Silver 2 plans. The actuarial certification of these adjustments has been included.

The Benefit Actuarial Value for each plan was determined using MVP's in-house benefit pricing tools. The pricing tools value the expected net paid claim cost associated with unique benefit plan designs from a starting single risk pool allowed amount. The AV is the ratio of the expected paid to allowed amount for each plan design. MVP did not reflect any induced utilization in the projection of the net paid amounts for each unique benefit plan.

The induced utilization factors used to set premium rates and compute the average in-force induced utilization factor are the HHS prescribed induced utilization factors of 1.00 for Bronze, 1.03 for Silver, 1.08 for Gold, and 1.15 for Platinum.

The actual paid to allowed ratio during the experience period and the assumed paid to allowed ratio used for pricing differ. The actual paid to allowed ratio (including assumed payments for cost sharing reductions) for the experience period is different than the pricing paid to allowed ratio produced by MVP's internal benefit relativity model. Because MVP prices using net claim expense instead of allowed claims, the allowed claims in the URRT need to be adjusted for the difference in the paid to allowed ratios to develop an equivalent Plan Adjusted Index Rate. The total of this adjustment is 9.8%.

The total adjustment made is the product of the three values (AV, induced demand, and difference in paid to allowed ratio).

Provider Network Adjustment (Worksheet 2, Section 3)

MVP only offers one provider network for its Vermont plans; therefore, no plan-level adjustment is necessary.

Benefits in Addition to EHB (Worksheet 2, Section 3)

Members purchasing a non-standard plan will receive MVP's Member Wellness Incentive (Form: FRVT366) and a \$500 acupuncture allowance. The wellness benefit provides subscribers with up to \$600 in wellness rewards per year, subject to certain guidelines. The cost of these benefits is included in the experience period claims as well as the plan AVs so an adjustment is not required.

Catastrophic Plan Adjustment (Worksheet 2, Section 3)

An additional plan level adjustment was applied to the catastrophic plan to account for the unique age eligibility requirements as permitted by the Federal ACA Rules. MVP did not reflect the fact that individuals facing financial hardship could also qualify to enroll in this plan.

MVP determined the adjustment factor for this plan by calculating the HHS Age factor for the eligible population and comparing it to the HHS Age factor of the experience period membership. The eligible population was assumed to be any member under the age of 30 that was not attached to a subscriber age 30 or older. It was assumed that a member

under the age of 30 and attached to a subscriber age 30 or older would enroll as a dependent in a non-catastrophic plan. The eligibility adjustment factor is equal to 0.581.

Catastrophic Plan Level Adjustment						
	HHS Age Factor					
Ages 0-29, Meeting Subscriber Qualifications	1.051					
Single Risk Pool Total	1.809					
Catastrophic Adjustment	0.581					

Non-Claim Expense Plan Level Adjustments

Non claim expenses include both percent of premium loads and PMPM loads. The loads do not vary by plan. Each Standard and Non-Standard plan is being loaded with the same PMPM and Percent of Premium loads. The loads are outlined below:

Federal Taxes PMPM based

A total of \$0.46 PMPM is added for fees MVP must pay to the Federal Government per ACA regulations on a PMPM basis. This is comprised of \$0.21 PMPM for the risk adjustment user fee levied by the Department of Health and Human Services and \$0.25 PMPM for the Patient Centered Outcome Research Fee.

State Taxes PMPM Based

\$2.37 PMPM is added for fees MVP must pay to the State of Vermont to help fund expenses incurred by state agencies and other non-profit organizations on MVP's behalf, including the Green Mountain Care Board, the Vermont Program for Quality in Health Care, Inc., and the Office of the Health Care Advocate. This is found by using the best available information about the market-wide cost of each of the programs and then accounting for MVP's market share from 2022 to 2024.

State Taxes Premium based – VT Vaccine Assessment

Based on information provided by the Vermont Vaccine Purchasing Program (VVPP), MVP's rates are \$13.54 per covered child and \$2.74 per covered adult for 2024, followed by an estimate of \$15.05 per covered child and \$3.00 per covered adult for 2025. Based on a blend of MVP's child and adult membership in the projection period, the total PMPM costs were determined for each year and given an equal weight, resulting in \$3.44 PMPM. This blended PMPM was then compared to the projection period premium PMPM before the assessment load to convert the assessment to a percent of premium load of 0.38%.

Federal Fees Premium based – National High Cost Reinsurance Pool (HCRP) Charge

In the 2024 Notice of Benefit and Payment Parameters issued by HHS, carriers will be compensated 60% for members' paid claims above \$1 million in a given plan year. The total reinsurance received across all states will be aggregated and compared to the national average premium PMPM to determine a percentage of premium charged to each issuer to fund the program.

Based on a national study performed by Wakely Consulting Group, the estimate of the load charged to individual market issuers in 2024 will be 0.55%.

General Administrative Expense Load (Including QI component)

The total administrative expense load included as a plan level adjustment equals \$52.74 PMPM and is used to cover SG&A expenses as well as Quality Improvement/Cost Containment Programs (QI). Based on an analysis of MVP's historical Supplemental Health Care Exhibit (SHCE) expenses, approximately 6% of MVP's total administrative expense was spent on QI. Therefore, \$3.16 PMPM of the \$52.74 PMPM administrative expense is attributable to QI.

The following table summarizes the administrative expenses for small group and individual lines of business from the 2020, 2021, and 2022 SHCEs compared to the available admin expense built into the rates for the same time period.

Combined VT AR42 and AR44	Year	Exchange Available Admin PMPM	SHCE Admin PMPM*
Individual	2020	N/A	\$35.40
Small Group	2020	N/A	\$33.65
Combined	2020	\$42.00	\$34.40
Individual	2021	N/A	\$51.71
Small Group	2021	N/A	\$44.49
Combined	2021	\$43.75	\$47.44
Individual	2022	\$47.10	\$48.26
Small Group	2022	\$38.75	\$39.63
Combined	2022	\$42.20	\$43.07

*Reflects lines 1.07, 6.6, 8.3, 10.1, and 10.4 of SHCE, Part 1

Contribution to Reserves/Risk Charge

MVP is building a 1.5% contribution to reserves/risk charge into the VT Exchange premium rates for 2024. This charge is added to premium rates to meet statutory reserve requirements for MVP's VT block of business and protect against adverse experience relative to pricing assumptions.

Bad Debt Expense

A plan level adjustment equal to 0.30% of premium was added to account for non-payment of premium risk.

Age/Geographic/Tobacco Calibration (Worksheet 2, Section 3)

Per Vermont stating rating rules, variation in rates due to tobacco and age are not allowed. Therefore, all calibration factors are 1. Additionally, there is only 1 rating region in Vermont, so the geography calibration is also 1.

Consumer Adjusted Premium Rates

The Calibrated Plan Adjusted Index Rate PMPMs are converted to per contract premium rates using the computed single conversion factor and the prescribed standard load ratios. Please note that due to the rounding present in the URRT template, actual Plan Adjusted Index Rate PMPMs may vary from the URRT to the actual rates as filed.

The single conversion factor (SCF) was calculated using subscriber and member data by contract type for the eligible population enrolled with MVP as of February 2023. The SCF = weighted average contract size / weighted average load ratio.

Projection Period Membership

MVP's projection period membership equals the February 2023 enrollment of the population eligible to purchase these products, or 11,602 members. On Worksheet 2 of the URRT, members are mapped based on their February 2023 benefit to the same benefits for 2024.

MVP is aware that the Medicaid continuous enrollment provision will not continue in 2024. We have decided not to assume a membership or morbidity change for this. We expect the impact to be the same as the overall market wide morbidity impact which we do not have data to support.

Guidance on loading for silver plans was implemented by the Green Mountain Care Board starting in 2024. Based on this, MVP has calculated pricing AVs for on-exchange silver plans using the weighted average benefit richness of silver members, inclusive of the CSR-adjusted benefits. Our current proposed relativities do not indicate there is a further

incentive for members to move to a different metal level. We studied the migration of silver CSR members to other plans over time. We also compared the premium relativities of other metal levels to silver as proposed and in prior years. Based on this information, we did not make a membership shift in response to the change in CSR loading.

Loss Ratio Information

The traditional target loss ratio (claims cost / premium) for the rates proposed in this rate filing is 91.2%. After adjusting for taxes/assessments and expenses associated with quality improvements, the Federal target loss ratio for the rates proposed in this filing is 92.7%. Please see the following table for a calculation of these loss ratios based on MVP's projected starting claim cost in 2024:

Target Loss Ratio for 2024 VT Exchange						
A) Claims Expense	\$831.86					
B) Taxes/Assessments	\$11.31					
C) Quality Improvement	\$3.16					
D) Premium	\$912.33					
E) Traditional Loss Ratio	91.2%					
= A) / D)						
F) Federal Loss Ratio	92.7%					
= [A) + C)] / [D) - B)]						

Actuarial Certification

I, Christopher Pontiff, am a Fellow of the Society of Actuaries and a Member of the American Academy of Actuaries. The projected Index Rate and Adjusted Paid Amount used in the development of these proposed premium rates is in compliance with all applicable State and Federal Statutes and Regulations (45 CFR 156.80(d)(1)) and developed in compliance with the applicable Actuarial Standards of Practice. I have examined the assumptions and methods used in determining MVP's requested rates. Based on my review and examination, it is my opinion that the proposed premium rates are reasonable in relation to the benefits provided and that they are not excessive, nor inadequate, nor unfairly discriminatory. They are developed using only the permitted rating classifications. The Adjusted Paid Amount and only the allowable modifiers as described in 45 CFR 156.80(d)(1) and 45 CFR 156.80(d)(2) were used to generate plan level rates. The Standard AV Calculator was used to determine the Metal AV Value to be shown in Worksheet 2 of the Part I Unified Rate Review template for all the plans. The EHB portion of premium reflected in Worksheet 2, Sections 3 and 4 was calculated in accordance with actuarial standards of practice.

The URRT does not demonstrate the process that was used to develop premium rates. Rather it represents information required by Federal regulation to be provided in support of the review of rate increases and for certification that the Index rate is developed in accordance with Federal regulation and used consistently and only adjusted by the allowable modifiers.

I certify that I am knowledgeable as to the Vermont laws and regulations that apply to this filing and that, to the best of my knowledge and belief, this filing is in compliance with such laws and regulations and provides all required benefits.

I am of the opinion that this filing is in compliance with the applicable Federal and State Laws and Regulations concerning the PPACA and the HCERA of 2010.

I certify that each rate filing has been prepared in accordance with the following Actuarial Standards of Practice; ASOP #5, ASOP#8, ASOP #12, ASOP #23, ASOP #25, ASOP#41, ASOP#45, and ASOP#50.

MVP Health Care, Inc.

Consumer Disclosure about Proposed Health Insurance Rate Increase VT 2024 ACA Individual Exchange Rate Filing

About Us

MVP Health Plan, Inc. is a non-profit health care payer operating in Vermont and New York. MVP's mission is to provide high quality and affordable health care with a focus on wellness to our members.

Why We Are Changing Our Premiums

MVP must obtain approval from the Green Mountain Care Board for the health insurance premium rates charged. MVP files annual premium rates for the Exchange which are guaranteed for 12 months. This rate filing seeks approval of MVP's 2024 Individual Exchange rates for effective dates of coverage between January 1, 2024 and December 31, 2024. The premium rates filed reflect MVP's current estimate of the cost to provide health insurance for that coverage period. The filed premium rates may be higher or lower than the previously filed premium rates, however, premium rates generally increase over time. Changes in the filed premium rates (relative to previously approved rates) are driven by many factors, including:

- -Increases in base period experience. Premium rates are increasing by **3.4%** because our estimate of 2023 claims are higher than expected compared to the previous year.
- -Increases in cost and utilization of services. The cost and utilization of medical and pharmacy services generally increase over time. Premium rates are increasing by 7.5% because of this estimated trend in 2024.
- -Impact of the Federal Risk Adjustment Program. The federal risk adjustment program seeks to "level the playing field" among insurers. MVP has enrolled a population of lower-risk members, so it is required to pay into the program. MVP's individual payment has become less, decreasing premium rates by approximately 0.2%.
- -Changes in the cost of doing business. As the cost of doing business rises over time, MVP must collect a portion of the premium revenue to protect consumers by ensuring its solvency. MVP aligned its administrative costs with the expected cost of the individual market. These changes are worth approximately 1.3% of a premium increase.
- -Impact of the Leap Year. MVP is increasing rates by approximately **0.3**% to account for 2024 being a leap year (and having an additional day).

Conclusion

The proposed rates reflect an average rate adjustment to prior rates of 12.8%, ranging from 7.7% to 15.5%. There are 8,470 policyholders, 8,470 subscribers and 11,602 members impacted by this rate filing.

Vermonters can provide public comment on the proposed rate increases during the public comment period beginning on May 9th. For information about providing public comment, please visit https://ratereview.vermont.gov/public-comment

Product-Plan Data Collection

Product/Plan Level Calculations

Company Legal Name: MVP Health Plan, Inc.

VT Individual

HIOS Issuer ID: Effective Date of Rate Change(s): 77566 State: 1/1/2024 Market: To add a product to Worksheet 2 - Plan Product Info, select the Add Product button or Ctrl + Shift + P. To add a plan to Worksheet 2 - Plan Product Info, select the Add Plan button or Ctrl + Shift + L.

To validate, select the Validate button or Ctrl + Shift + I.

To finalize, select the Finalize button or Ctrl + Shift + F.

To remove a product, navigate to the corresponding Product Name/Product ID field and select the Remove Product button or Ctrl + Shift + Q. To remove a plan, navigate to the corresponding Plan Name/Plan ID field and select the Remove Plan button or Ctrl + Shift + A.

ACTUARIAL MEMORANDUM 2024 Vermont Individual Exchange Filing

Purpose and Scope of Filing

This memorandum details the methods and assumptions underlying the proposed 2024 premium rates for the State of Vermont's Individual ACA compliant market. These products will be issued by MVP Health Plan, Inc. (MVP), a non-profit subsidiary of MVP Health Care, Inc. The rate filing has been prepared to satisfy the requirements of 8 V.S.A §5104 as well as the requirements of the Federal ACA including 45 CFR Part 156, §156.80. The premium rates are effective between 1/1/2024 and 12/31/2024. There are no benefit plans being retired, nor are there any new benefit plans being added. MVP modified several of the benefits being offered, and the updated forms have been submitted in a separate SERFF filing. The proposed average rate increase (MVP's revenue increase) is 12.8%, with increases ranging from 7.7% to 15.5%.

Market/Benefits

All benefit plans included in this rate filing are available to everyone eligible to purchase coverage in the individual market.

A description of benefits is included in Exhibit 1 of the rate filing. As in 2023, MVP has filed Silver plans to be sold off exchange known as "reflective" Silver plans. These plans are equivalent to the corresponding on exchange plan with the exception of a \$5 copay or 5% coinsurance change to the ambulance benefit or a modification to the deductible/maximum out of pocket for the plan which has no cost sharing after the deductible.

Exhibit 1A of the filing provides an overview of benefit changes for renewing plans from 2023 to 2024. As noted in the rate filing document, design changes from the previous year's plan design are shaded in gray.

All Essential Health Benefits (EHBs) are covered. Only one EHB substitution was made as required by the DVHA, a substitution for the \$2,000 annual Private Duty Nursing benefit limit in the benchmark plan. MVP previously contracted Milliman to determine an actuarially equivalent visit limit, and the claim data in the experience period represents this actuarially equivalent limit.

The non-standard plans proposed by MVP and included in this rate filing contain two benefits in excess of the EHBs: a wellness benefit and an acupuncture allowance of \$500. The wellness benefit and acupuncture allowance are included in all non-standard products and the wellness benefit is filed as a mandatory rider, form: FRVT366.

To inform consumers of the availability and details of the products included in this filing, MVP will provide community outreach support as well as offer web and print product content and other printed product materials for VT plans. MVP will also have a mass media presence to further educate health care customers in Vermont.

The book of business affected by this rate filing is 8,470 policyholders, 8,470 subscribers and 11,602 members based on February 2023 membership.

Experience Period Claims

MVP historical claim data was the basis of the premium rate development. All ACA compliant Individual data is included in the experience period data set. The claim data is assumed to be fully credible.

The experience period for the historical claims is incurred dates of service between 1/1/22 and 12/31/22, paid through 2/28/23. MVP has restated its incurred medical claim estimates to complete the claims through 3/31/23.

Please see Exhibit 3 for a summary of MVP's experience period claims, market-wide adjustments to experience period claims, and the development of the paid Index rate PMPM. Details of the market-wide adjustments and trend projections being made to MVP's experience period data are discussed below.

Line 1 of Exhibit 3 provides the member months for the experience period for the rating pool.

Line 2 of Exhibit 3 provides the experience period fee for service medical claim expense on a "per member per month" (PMPM basis). This includes all claims for medical services paid by MVP for the rating pool during the experience period.

Line 3 of Exhibit 3 provides the FFS claims paid by MVP for pediatric dental services provided to members in the rating pool during the experience period.

Line 4 reflects the assumption for claims Incurred but not Reported (IBNR) as of the latest date the claims data was paid through. We have completed the claims using an IBNR factor of 1.8% which is our best estimate of ultimate liabilities as of 3/31/23. MVP uses a combined trended PMPM and completion factor method to value its ultimate claim liabilities. Note that the model used to calculate IBNR for this block of business includes all Vermont business, so the paid and incurred claims below will not match the paid and incurred claims in the filing. Please see the following table comparing incurred and paid claim amounts by month for the experience period.

T	1	I	
		Incurred	
Incurred Month	Paid Claims	Claims	IBNR Factor
202212	\$18,211,516	\$19,193,037	1.054
202211	\$16,714,473	\$17,322,906	1.036
202210	\$18,629,912	\$19,962,840	1.072
202209	\$15,745,369	\$15,922,114	1.011
202208	\$17,689,240	\$17,868,631	1.010
202207	\$17,196,684	\$17,476,872	1.016
202206	\$17,427,673	\$17,467,389	1.002
202205	\$17,299,783	\$17,342,327	1.002
202204	\$17,055,835	\$17,078,435	1.001
202203	\$17,459,308	\$17,462,993	1.000
202202	\$14,493,506	\$14,482,313	0.999
202201	\$15,014,176	\$15,010,911	1.000
Total	\$202,937,477	\$206,590,768	1.018

Line 5 reflects medical plus dental fee-for-service (FFS) claims, completed with IBNR. The formula is line 2 multiplied by line 4, then adding line 3. MVP is assuming that dental claims are fully complete with two months of run-out, and therefore IBNR is not applied to these claims.

Line 6 provides the experience period incurred pharmacy claims for the rating pool. Pharmacy claims include any claims which are paid through the pharmacy portion of the member's benefits.

Experience period Rx rebates are reflected in line 7 of Exhibit 3.

Line 8 of Exhibit 3 reflects MVP's ultimate liability for pharmacy claims during the experience period, which nets manufacturer rebates from the incurred claims paid by MVP.

Line 9 of Exhibit 3 reflects expenses for services such as capitations and other non-FFS medical expenses which come from MVP's General Ledger and are not processed through MVP's claims system. Please see the table below for detail on the items that comprise the capitation and non-FFS expenses reflected in MVP's experience period claims.

Summary of Experience Period Non-FFS and Capitation Amounts

Other Medical Expenses not in claim warehouse	\$5.38
Net Reinsurance Expense	\$1.09
Medical Home and PCP Incentive	\$3.56
Total Non-FFS and Capitation Amounts	\$10.03

^{*}Note: VT Paid Claim Surcharge (0.999% of paid claims) and NY HCRA Surcharge (0.15% of paid claims) are not reflected in figures above. Line 9 of Exhibit 3 = (line 5 of Exhibit 3 + line 8 of Exhibit 3) * 1.149% + the applicable value shown above.

Line 10 of Exhibit 3 represents MVP's best estimate of the costs incurred to cover members in the rating pool during the experience period after making the adjustments described above. It is calculated by summing the medical and dental FFS incurred claims completed with IBNR (line 5 of Exhibit 3), the pharmacy incurred claims net of rebates (line 8 of Exhibit 3), and the capitation and non-FFS medical expenses (line 9 of Exhibit 3).

Market-Wide Adjustments to Experience Period Claims

Several adjustments to the experience period incurred claim costs were necessary to adjust for items not captured in the experience period. The adjustments are explained below.

Line 11- Adjustment for Waived Cost Share Due to COVID-19

MVP is removing \$1.40 PMPM to account for cost sharing related to the COVID-19 pandemic including treatment, visits, and testing that was waived during the experience period. Cost sharing will shift back to the members in 2024 with the unwinding of the public health emergency.

Line 12- Adjustment for COVID Testing

MVP is assuming a 10% reduction in Covid testing costs in the projection period due to a utilization decrease, resulting in the removal of \$0.31 PMPM. We expect demand for testing to decrease once cost sharing is reinstituted.

Line 13- Adjustment for COVID Vaccines

It is expected commercial payers will have to pay the full ingredient cost of Covid vaccines by 2024. MVP is taking 2022 experience and increasing it by \$130/\$40, the expected ingredient cost in 2024 over what we pay currently¹. This results in an additional \$2.29 PMPM.

Line 14- Adjustment for Hearing Aids as EHB

Hearing aids have been added as an essential health benefit in 2024. MVP analyzed historical experience in its New York population and determined this mandate would result in an additional \$0.34 PMPM.

Line 15- Adjustment for Abortions Covered in Full

Vermont has mandated coverage of abortions without cost sharing except before the deductible on HDHPs. MVP analyzed its historical VT experience and determined this is worth \$0.02 PMPM.

Line 16- Adjustment for Telemedicine Benefit Expansion

Telemedicine is now covered in full on all plans. The Consolidation Appropriations Act of 2023 allowed the extension of safe harbor before the deductible for all telehealth, even for HDHPs. Our benefit relativity model accounts for this so the expansion of telemedicine for all HDHPs is reflected in the AV of the plan. Based on the cost share MVP took in 2022, this benefit is an additional \$0.02 PMPM on the rate.

 $^{^{1}\} https://www.kff.org/coronavirus-covid-19/issue-brief/how-much-could-covid-19-vaccines-cost-the-u-s-after-commercialization/$

Line 17- Adjustment for Leap Year

Because the rating period is a leap year and the experience period is not a leap year, the rating period will have one more day than the experience period. Assuming claims are uniformly distributed among all days in the year, MVP is adjusting the experience period claim expense upward by 0.27% (366 days / 365 days), or \$1.67 PMPM.

Medical Trend Factors

The development of annual medical paid claim trend factors for 2023 and 2024 is illustrated in Exhibit 2a.

For VT providers whose contractual reimbursement changes are governed by the GMCB, MVP is reflecting the GMCB's most recently approved budgeted changes as the unit cost trend for 2023. Due to the unusually large increases in hospital budgets last year, we are using approved 2022 increases as the best estimate of future budgeted changes for 2024. For VT providers not governed by the GMCB and non-VT providers, MVP is reflecting its best estimate of unit cost changes. Total allowed unit cost trend is 10.9% for 2023 and 4.8% for 2024.

MVP analyzed historical medical utilization trends for its VT block of business and determined that the data has been too volatile in recent years to use for medical utilization trend purposes. MVP attributes this volatility to the significant membership growth for this block of business and COVID-19. During the 2020 filing, "L&E [Lewis & Ellis Actuaries and Consultants] performed a series of independent trend calculations using market wide utilization data from 2015 to 2018" and found that "After assessing all the market wide results, L&E believes that a reasonable range for market wide utilization trend to be 1% to 4%" (L&E Actuarial Memo, SERFF # MVPH-131934219, page 7). MVP has maintained this same trend in the filing each year. Because MVP believes that their data still lacks necessary stability and L&E's view of utilization trend encompasses the entire market, MVP has built in a 1% annual utilization trend for this filing.

In addition to the medical cost inflation rate assumed from the historical experience period to the rating period, an adjustment is needed to reflect the impact of cost share leveraging on the carrier's share of the medical cost. Leveraging is a result of the fixed nature of deductibles and copays in health benefit plans. When there are fixed member deductibles and copays, the carrier bears a greater portion of the cost of medical inflation. Therefore, an additional factor adjustment is made to the trend assumption to capture this cost.

The trend applied to the deductible portion of the experience period was derived using the distribution of claims for MVP's entire book of business (consistent with the data in MVP's benefit relativity model). Claims below the average deductible amount over the experience period were trended at the applicable allowed trend rate while claims greater than the deductible were held flat.

The average annual allowed trend factor applied to FFS medical claims in this filing is 8.9%. The annual paid leveraging factor is 0.8% which results in an average annual paid FFS medical trend of 9.8%. This can be found on line 19 of Exhibit 3.

Rx Trend Factors

Annual allowed Rx trend factors split by generic, brand, and specialty drugs are illustrated in Exhibit 2a. The trend forecast provided by MVP's PBM was determined using MVP's Vermont commercial data by drug class. The forecasts provided by MVP's PBM account for drugs coming off patent, changes in average wholesale price, new drugs being released to the market, and price competitiveness amongst generic and brand drug manufacturers. In addition to the market trend data provided by the PBM, MVP is also reflecting its best estimate of known contract changes for 2023 and 2024. Those contract changes are reflected in the unit cost trends shown on Exhibit 2a.

Supporting documentation illustrating how the Rx trends shown on Exhibit 2a were converted to paid trends for 2023 and 2024 can be found in Exhibit 2b.

To project rebates, MVP has taken the experience period rebates as a percentage of the experience period allowed claims (29.5%) and applied that percentage to the rating period allowed claims. This represents MVP's best estimate of future rebates that will be shared between the PBM and MVP.

The average annual allowed Rx trend in this filing is 8.6%, and the average annual paid Rx trend net of Rx rebates is 9.2% which can be found in line 20 of Exhibit 3.

The Annual FFS Claim Trend Projection factor shown in line 21 of Exhibit 3 represents the blended FFS annual trend projection. To arrive at the blended trend projection shown in line 21, the following calculation is performed: [line 5 * line 19 + line 8 * line 20] / [line 5 + line 8]. The annual trend is then applied for 24 months to move the experience period data from the experience period to the rating period, and the rating period FFS claim expense on a PMPM basis is reflected in line 23 of Exhibit 3.

Paid Claim Surcharges, Capitation, and Non-FFS PMPM Projection

The paid claim surcharges, capitation, and non-FFS expenses shown in lines 24 and 25 of Exhibit 3 represent MVP's best estimate of these costs in the projection period. A summary of the expenses driving the capitation and non-FFS expenses in line 25 can be found below. Expenses captured in the "Other Medical Expense not in warehouse" line include student out of area charges, a surcharge levied by the state of Massachusetts, and manual checks.

Summary of Rating Period Non-FFS and Capitation Amounts					
	·				
Other Medical Expenses not in claim warehouse	\$5.38				
Net Reinsurance Expense	\$0.75				
Medical Home and PCP Incentive	\$3.56				
Total Non-FFS and Capitation Amounts	\$9.69				

MVP is assuming that the VT paid claim surcharge will remain unchanged in 2024 and equal 0.999%. The NYS HCRA surcharge of 0.15% is also unchanged.

Federal Risk Adjustment Program

(see Exhibit 7)

Based on the Interim Risk Transfer results for 2022 provided by CMS, MVP is expected to pay \$13,309,301 into the individual market transfer pool for 2022. This is \$80.60 on a PMPM basis or 13.2% of experience period claims prior to market-wide adjustments. To calculate line 27 of Exhibit 3, MVP applied this risk adjustment payment as a percentage of claim expense to line 26 of Exhibit 3, which the best estimate of the rating period claim expense. This results in an estimated payment of \$97.11 PMPM or \$16,036,327 using experience period membership.

Plan Level Adjustments / Plan Specific Net and Gross Index PMPM rates

Line 28 of Exhibit 3 represents MVP's projected paid index rate after adjustments for 2024. This is the starting net claim cost that will be used to set 2024 premium rates. Gross Index rates and contract tier rates are calculated in Exhibit 7. The plan specific net claim cost for each plan is computed as follows on Exhibit 7:

Adjusted Claim Cost For Pricing (see Exhibit 7) = Projected Paid Index Rate After Adjustments PMPM (line 28 of Exhibit 3)

[Avg Inforce Actuarial Value * Induced Utilization Factor]

Plan Specific Net Claim Cost PMPM = Adjusted Claim Cost for Pricing * Benefit Actuarial Value * Plan Induced Utilization Factor

The Plan Specific Gross Claim Cost PMPM for each plan is derived by adjusting the Plan Specific Net Claim Cost PMPM which account for Benefits in Excess of EHBs, PMPM non-claim expense loads, and percent of premium non-claim expense loads.

Actuarial Values and Induced Utilization Factors

The AV Metal Level for each plan was determined using the Federally prescribed Actuarial Value Calculator. Adjustments for aggregate deductibles, the VT Rx OOPM, and safe harbor prescription Rx benefits were made to the calculator results for the non-standard plans. The actuarial certification of these adjustments has been included as an attachment to this filing in SERFF.

The Benefit Actuarial Value for each plan was determined using MVP's in-house benefit relativity model. The pricing tools value the expected net paid claim cost associated with unique benefit plan designs from a starting single risk pool allowed amount. The AV is the ratio of the expected paid to allowed amount for each plan design.

The induced utilization factors used to set premium rates and compute the average in-force induced utilization factor are the HHS prescribed induced utilization factors of 1.00 for Bronze, 1.03 for Silver, 1.08 for Gold, and 1.15 for Platinum. The experience period actuarial value times induced demand factor (0.7793) can be found in Exhibit 7.

Non-Claim Expense Plan Level Adjustments

Non claim expenses include both percent of premium loads and PMPM loads. The loads do not vary by plan. Each Standard and Non-Standard plan is being loaded with the same PMPM and Percent of Premium loads. The loads are outlined below and summarized in Exhibit 5.

Federal Taxes PMPM based

A total of \$0.46 PMPM is added for fees MVP must pay to the Federal Government per ACA regulations on a PMPM basis. This is comprised of \$0.21 PMPM for the risk adjustment user fee levied by the Department of Health and Human Services and \$0.25 PMPM for the Patient Centered Outcome Research Fee.

State Taxes PMPM Based

\$2.37 PMPM is added for fees MVP must pay to the State of Vermont to help fund expenses incurred by state agencies and other non-profit organizations on MVP's behalf, including the Green Mountain Care Board, the Vermont Program for Quality in Health Care, Inc., and the Office of the Health Care Advocate. This is found by using the best available information about the market-wide cost of each of the programs and then accounting for MVP's market share from 2022 to 2024.

State Taxes Premium based – VT Vaccine Assessment

Based on information provided by the Vermont Vaccine Purchasing Program (VVPP), MVP's rates are \$13.54 per covered child and \$2.74 per covered adult for 2024, followed by an estimate of \$15.05 per covered child and \$3.00 per covered adult for 2025. Based on a blend of MVP's child and adult membership in the projection period, the total PMPM costs were determined for each year and given an equal weight, resulting in \$3.44 PMPM. This blended PMPM was then compared to the projection period premium PMPM before the assessment load to convert the assessment to a percent of premium load of 0.38%.

Federal Fees Premium based – National High Cost Reinsurance Pool (HCRP) Charge

In the 2024 Notice of Benefit and Payment Parameters issued by HHS, carriers will be compensated 60% for members' paid claims above \$1 million in a given plan year. The total reinsurance received across all states will be aggregated and compared to the national average premium PMPM to determine a percentage of premium charged to each issuer to fund the program.

Based on a national study performed by Wakely Consulting Group, the estimate of the load charged to individual market issuers in 2024 will be 0.55%.

General Administrative Expense Load (Including QI component)

The total administrative expense load included as a plan level adjustment equals \$52.74 PMPM and is used to cover SG&A expenses as well as Quality Improvement/Cost Containment Programs (QI). Based on an analysis of MVP's historical Supplemental Health Care Exhibit (SHCE) expenses, approximately 6% of MVP's total administrative expense was spent on QI. Therefore, \$3.16 PMPM of the \$52.74 PMPM administrative expense is attributable to QI.

The following table summarizes the administrative expenses for small group and individual lines of business from the 2020, 2021, and 2022 SHCEs compared to the available admin expense built into the rates for the same time period.

Combined VT AR42 and AR44	Year	Exchange Available Admin PMPM	SHCE Admin PMPM*
Individual	2020	N/A	\$35.40
Small Group	2020	N/A	\$33.65
Combined	2020	\$42.00	\$34.40
Individual	2021	N/A	\$51.71
Small Group	2021	N/A	\$44.49
Combined	2021	\$43.75	\$47.44
Individual	2022	\$47.10	\$48.26
Small Group	2022	\$38.75	\$39.63
Combined	2022	\$42.20	\$43.07

*Reflects lines 1.07, 6.6, 8.3, 10.1, and 10.4 of SHCE, Part 1

Contribution to Reserves/Risk Charge

MVP is building a 1.5% contribution to reserves/risk charge into the VT Exchange premium rates for 2024. This charge is added to premium rates to meet statutory reserve requirements for MVP's VT block of business and protect against adverse experience relative to pricing assumptions.

Bad Debt Expense

A plan level adjustment equal to 0.30% of premium was added to account for non-payment of premium risk.

Rider FRVT366 (Wellness Benefit in Addition to EHBs)

Members purchasing a non-standard plan will receive MVP's Member Wellness Incentive (Form: FRVT366). This is an enhancement to the current wellness benefit whereby primary subscribers can earn up to \$600 in reimbursements for wellness-related activities. The cost of this benefit is included in the experience period claims as well as the plan AVs so an adjustment is not required on Exhibit 7.

Acupuncture Allowance (Benefit in Addition to EHBs)

MVP is including a \$500 acupuncture allowance in its benefits in 2024. The cost of this benefit is included in the experience period claims as well as the plan AVs so an adjustment is not required on Exhibit 7.

Catastrophic Plan Adjustment

An additional plan level adjustment was applied to the catastrophic plan to account for the unique age eligibility requirements as permitted by the Federal ACA Rules. MVP did not reflect the fact that individuals facing financial hardship could also qualify to enroll in this plan.

MVP determined the adjustment factor for this plan by calculating the HHS Age factor for the eligible population and comparing it to the HHS Age factor of the experience period membership. The eligible population was assumed to be any member under the age of 30 that was not attached to a subscriber age 30 or older. It was assumed that a member under the age of 30 and attached to a subscriber age 30 or older would enroll as a dependent in a non-catastrophic plan. The eligibility adjustment factor is equal to 0.581 and is reflected in the "Induced Utilization Factor" adjustment of Exhibit 7 for this plan.

Catastrophic Plan Level Adjustment					
	HHS Age Factor				
Ages 0-29, Meeting Subscriber Qualifications	1.051				
Single Risk Pool Total	1.809				
Catastrophic Adjustment	0.581				

Per Contract Premium Rates

The Plan Specific Gross Claim Cost PMPMs computed in Exhibit 7 are converted to per contract premium rates using the computed single conversion factor and the prescribed standard load ratios. The single conversion factor (SCF) was calculated using subscriber and member data by contract type for the eligible population enrolled with MVP as of February 2023. The SCF = weighted average contract size / weighted average load ratio. Please see Exhibit 4 for the derivation of the SCF.

Silver CSR Loading

As stated previously, the Federal government has cancelled reimbursement of incurred claims under the CSR program effective October 2017. However, members are still eligible for the reduced cost sharing plans in the program, which will have to be covered by increasing premiums. The state of Vermont's solution to this problem was to create two sets of Silver plans: one set for non-CSR members with premiums that do not reflect the CSR defunding and one set for CSR members which reflect the CSR defunding in the premium. This was done so that the second-lowest cost Silver plan on the exchange would have an increased premium, which is the plan used to determine how much lower-income members will receive in premium subsidies through the federal Advance Premium Tax Credits (APTC) program. That way, premium increases for CSR defunding will be met with corresponding increases in APTC subsidies and the net policyholder premium increase will be minimized.

Guidance on silver loading was implemented by the Green Mountain Care Board starting in 2024. Based on this, MVP has calculated pricing AVs for on-exchange silver plans using the weighted average benefit richness of silver members, inclusive of the CSR-adjusted benefits. These AVs can be found on Exhibit 7 of the rate filing. Our current proposed relativities do not indicate there is a further incentive for members to move to a different metal level. We studied the migration of silver CSR members to other plans over time. We also compared the premium relativities of other metal levels to silver as proposed and in prior years. Based on this information, we did not make a membership shift in response to the change in CSR loading.

Loss Ratio Information

The traditional target loss ratio (claims cost / premium) for the rates proposed in this rate filing is 91.2%. After adjusting for taxes/assessments and expenses associated with quality improvements, the Federal target loss ratio for the rates proposed in this filing is 92.7%. Please see the following table for a calculation of these loss ratios based on MVP's projected starting claim cost in 2024:

Target Loss Ratio for 2024 VT Exchange					
A) Claims Expense	\$831.86				
B) Taxes/Assessments	\$11.31				
C) Quality Improvement	\$3.16				
D) Premium	\$912.33				
E) Traditional Loss Ratio	91.2%				
= A) / D)					
F) Federal Loss Ratio	92.7%				
= [A) + C)] / [D) - B)]					

MVP does not anticipate having to rebate members for 2022 per the ACA minimum MLR requirements.

Actuarial Dataset, Rate Increase Exhibit, URRT, and Federal Memorandum

Also included with this rate filing are L&E's Actuarial Dataset, a projection of rate increases for ACA compliant subscribers as of February 2023, the Federal URRT, and the Federal Actuarial Memorandum.

Projection Period Enrollment

MVP's projection period membership equals the February 2023 enrollment of the population eligible to purchase these products, or 11,602 members. On Worksheet 2 of the URRT, members are mapped based on their February 2023 benefit to the same benefits for 2024.

MVP is aware that the Medicaid continuous enrollment provision will not continue in 2024. We have decided not to assume a membership or morbidity change for this. We expect the impact to be the same as the overall market wide morbidity impact which we do not have data to project or support.

Actuarial Certification

I, Christopher Pontiff, am a Fellow of the Society of Actuaries and a Member of the American Academy of Actuaries. The projected Index Rate and Adjusted Paid Amount used in the development of these proposed premium rates is in compliance with all applicable State and Federal Statutes and Regulations (45 CFR 156.80(d)(1)) and developed in compliance with the applicable Actuarial Standards of Practice. I have examined the assumptions and methods used in determining MVP's requested rates. Based on my review and examination, it is my opinion that the proposed premium rates are reasonable in relation to the benefits provided and that they are not excessive, nor inadequate, nor unfairly discriminatory. They are developed using only the permitted rating classifications. The Adjusted Paid Amount and only the allowable modifiers as described in 45 CFR 156.80(d)(1) and 45 CFR 156.80(d)(2) were used to generate plan level rates. The Standard AV Calculator was used to determine the Metal AV Value to be shown in Worksheet 2 of the Part I Unified Rate Review template for all the plans.

I certify that I am knowledgeable as to the Vermont laws and regulations that apply to this filing and that, to the best of my knowledge and belief, this filing is in compliance with such laws and regulations and provides all required benefits.

I am of the opinion that this filing is in compliance with the applicable Federal and State Laws and Regulations concerning the PPACA and the HCERA of 2010. The proposed premium rates were developed based on currently approved State and Federal regulations and statutes. If modifications are made to State or Federal regulations or statutes for the 2024 plan year after this filing is submitted, including but not limited to changes to the enforcement of the individual mandate, changes to rules around selling across state lines or association groups, the proposed premium rates may not be reasonable relative to the benefits being offered and could result in inadequate premium rates. If

such modifications are made, MVP will pursue an adjustment to the proposed premium rates to reflect the regulations and statutes that will be in place for the 2024 plan year.

I certify that each rate filing has been prepared in accordance with the following Actuarial Standards of Practice; ASOP #5, ASOP#8, ASOP #12, ASOP #23, ASOP #25, ASOP #26, ASOP#41, ASOP#42, ASOP#45, and ASOP#50.

Mote:

The historical time periods should represent calendar years since the inception date of the plan type through the most recent date available allowing for the appropriate amount of run-out.

The interint time period the time periods available in the current year.

The future year should represent the 12 months immediately following the rate effective date.

Consumer Adjusted Premium Rate Development
Section is all VRS2 of the URR1 (requires that the issuer provide the Actuarial Value and cost-sharing design of the plan. Provide the breakdown of this value between Cost Sharing Only and Induced Utilization for every plan in the URR1. (Add additional columns as reeded to include all plans shown on the URR1)
Provide the breakdown of this value between Cost Sharing Only and Induced Utilization for every plan in the URR1. (Add additional columns as reeded to include all plans shown on the URR1)

ACTUARIAL CERTIFICATION FEDERAL ACTUARIAL VALUE ADJUSTMENT VERMONT EXCHANGE Gold 3 HDHP Plus Silver 2 HDHP Plus Silver 2 HDHP Plus II

MVP Health Plan, Inc., a fully owned subsidiary of MVP Health Care, offers a range of products on the Vermont Exchange as well as Silver metal plans off the Exchange. One standard plan is offered at the Platinum and Catastrophic metal levels, while standard and non-standard plans are offered at the remaining levels. Standard plans are prescribed by the State of Vermont and are separately certified where necessary. Non-standard plans are filed at the discretion of MVP. MVP offers three non-standard benefit plans, Gold 3 HDHP Plus, Silver 2 HDHP Plus, and Silver 2 HDHP Plus II, with benefit features that don't fit into the parameters of the Federal Actuarial Value Calculator and therefore are being certified herein. The purpose of this memorandum is to document the actuarial analysis and adjusted actuarial values output from the 2024 Federal Actuarial Value calculator exhibiting compliance with the metal level requirements outlined in 45 CFR 156.140(b).

MVP's benefit pricing model is populated with allowed claim utilization from approximately 190,000 covered MVP commercial members. The data reflects claims paid for 2021 incurred dates, paid as of December 31st, 2022. MVP combines data from all its commercial products and states to increase the credibility in the data set. This data set is considered fully credible and appropriate for use as a benefit pricing tool for MVP's fully insured commercial members. The underlying data is appropriate relative to the Vermont Essential Health Benefit Package.

The model uses traditional continuance table logic to value plan deductibles and OOP maximums as well as average utilization per 1,000 and average unit cost per service data for all the significant services that drive member cost sharing. Specific factor adjustments are included in the methodology to account for family deductible and OOP limits, aggregate deductible types, and the State of Vermont maximum Rx OOP regulation. While reduced copays for 90-day supplies of mail order prescriptions also does not fit into the Federal Actuarial Value calculator, the impact on the Actuarial Value is negligible for all plans and is not reflected in the factors presented. The factor adjustments were derived based on modeling the Net Plan liabilities from this subscriber/member based historical allowed claim data set both with and without these benefit features.

The methodology of MVP's benefit pricing tool is consistent with the methodology underlying the Federal calculator with regard to the following factors: continuance tables that reflect membership enrolled for a full 12 months, out of network costs are not considered in the actuarial values, and the model reflects the anticipated utilization of the standard population buying products at these metal levels without consideration for induced demand.

Pursuant to 45 CFR 156.135(b) one of two permitted alternative methods must be used to determine any final adjusted Federal AV. MVP used the AV Calculator to determine the Federal AV for the plan provisions that fit within the calculator parameters and then calculated an actuarial adjustment factor to apply to the calculator produced AV to account for the plan features that materially deviate from the calculator parameters. The product of the Federal Calculator produced AV times the actuarial adjustment factor is the final Federal AV for the benefit plan. I certify that the adjustments made are appropriate and in accordance with generally accepted actuarial principles and methodologies.

The following 3 benefit features for the Gold 3 HDHP Plus were determined to not fit the Federal Calculator:

VT secondary Rx OOP max

Aggregate Family Deductible

Safe harbor prescription drug benefits excluded from the plan deductible

The following 2 benefit features for the Silver 2 HDHP Plus and Silver 2 HDHP II Plus were determined to not fit the Federal Calculator:

VT secondary Rx OOP max

Safe harbor prescription drug benefits excluded from the plan deductible

The following 2 benefit features for the Silver 2 HDHP Plus 73%, 77%, and 87% cost-sharing reduction plans were determined to not fit the Federal Calculator:

VT secondary Rx OOP max

Safe harbor prescription drug benefits excluded from the plan deductible

The following benefit feature for the Silver 2 HDHP Plus 94% cost-sharing reduction plan was determined to not fit the Federal Calculator:

Safe harbor prescription drug benefits excluded from the plan deductible

To determine the adjustment factors, I used MVP's proprietary benefit pricing tool to value the AV for these plans first excluding the above features that don't fit the calculator and a second time with the above benefit changes. The ratio of the two AVs is the actuarial adjustment factor used to modify the Federal Calculator computed AV.

Plan Description	MVP determined AV	Federal AV before/after adjustment
Gold 3 HDHP Plus with no secondary Rx OOP max, with embedded single deductibles and with no safe harbor drug benefit	83.88%	80.89%
Gold 3 HDHP Plus including the secondary Rx OOP max, the aggregate family deductible and the safe harbor drug benefit	83.24%	80.27%
Silver 2 HDHP Plus with no secondary Rx OOP max and with no safe harbor drug benefit	69.16%	70.12%
Silver 2 HDHP Plus including the secondary Rx OOP max and the safe harbor drug benefit	71.01%	72.00%
Silver 2 HDHP Plus 73% CSR with no secondary Rx OOP max and with no safe harbor drug benefit	71.53%	72.53%
Silver 2 HDHP Plus 73% CSR including the secondary Rx OOP max and the safe harbor drug benefit	72.86%	73.88%
Silver 2 HDHP Plus 77% CSR with no secondary Rx OOP max and with no safe harbor drug benefit	76.04%	77.16%
Silver 2 HDHP Plus 77% CSR including the secondary Rx OOP max and the safe harbor drug benefit	76.76%	77.89%
Silver 2 HDHP Plus 87% CSR with no secondary Rx OOP max and with no safe harbor drug benefit	84.72%	87.65%
Silver 2 HDHP Plus 87% CSR including the secondary Rx OOP max and the safe harbor drug benefit	84.75%	87.68%
Silver 2 HDHP Plus 94% CSR with no safe harbor drug benefit	90.83%	94.15%
Silver 2 HDHP Plus 94% CSR including the safe harbor drug benefit	90.84%	94.16%
Silver 2 HDHP Plus II with no secondary Rx OOP max and with no safe harbor drug benefit	69.07%	70.05%
Silver 2 HDHP Plus II including the secondary Rx OOP max and the safe harbor drug benefit	70.93%	71.94%

Actuarial Adjustment factor for Gold 3 Plan: 0.9924 = 83.24% / 83.88%Final Federal AV for Gold 3 Plan: $80.89\% \times 0.9924 = 80.27\%$

Actuarial Adjustment factor for Silver 2 Plan: 1.0267 = 71.01% / 69.16% Final Federal AV for Silver 2 Plan: 70.12% x 1.0267 = 72.00%

Actuarial Adjustment factor for Silver 2 73% Plan: 1.0186 = 72.86% / 71.53% Final Federal AV for Silver 2 73% Plan: 72.53% x 1.0186 = 73.88%

Actuarial Adjustment factor for Silver 2 77% Plan: 1.0095 = 76.76% / 76.04% Final Federal AV for Silver 2 77% Plan: $77.16\% \times 1.0095 = 77.89\%$

Actuarial Adjustment factor for Silver 2 87% Plan: 1.0004 = 84.75% / 84.72% Final Federal AV for Silver 2 87% Plan: $87.65\% \times 1.0004 = 87.68\%$

Actuarial Adjustment factor for Silver 2 94% Plan: 1.0001 = 90.84% / 90.83% Final Federal AV for Silver 2 94% Plan: 94.15% x 1.0001 = 94.16%

Actuarial Adjustment factor for Silver 2 II Plan: 1.0269 = 70.93% / 69.07% Final Federal AV for Silver 2 II Plan: $70.05\% \times 1.0269 = 71.94\%$

CERTIFICATION

I, Christopher Pontiff, Senior Director, Actuarial Services for MVP Health Care, am a member of the Academy of Actuaries and a Fellow of the Society of Actuaries, and I meet its qualification standards to provide this certification. I have used the 2024 Actuarial Value Calculator to determine the actuarial value for the plan provisions that fit within the calculator and have determined the actuarially appropriate adjustment factors to apply where necessary for the identified plan features that, in my opinion, deviates substantially from the allowable inputs of the Federal calculator. The development of the actuarial value adjustment factor was determined in accordance with generally accepted actuarial principles and practices and conforms with the exception methodology outlined in 45 CFR 156.135 (b)(3).

The final actuarial values reported for each of these benefit plans, those from the Federal Calculator alone, and the adjusted plans, meet the required actuarial values for each respective metal level as outlined in 45 CFR 156.140(b).

Christopher Pontiff, FSA, MAAA

Senior Director, Commercial Pricing, Network & Trend Actuary

MVP Health Care

Executive Summary

The Affordable Care Act (ACA) requires that health care coverage provided by issuers to non-grandfathered individual and small groups must cover all Essential Health Benefits (EHBs) and have plan designs that have Actuarial Values (AVs) that fall under the Platinum (90% AV), Gold (80% AV), Silver (70% AV), or Bronze (60% AV) tiers.

The State of Vermont (State) is standardizing several plan designs that all issuers offering plans in the Exchange, Vermont Health Connect, must offer. Issuers must offer the standard plan designs in the individual and small group markets. In 2023, there was one Platinum, one Gold, two Silver, and three Bronze standard plan designs for Vermont Health Connect. There is a traditional deductible plan at each of the Platinum, Gold, and Silver metal levels, with two at the Bronze level, and a High Deductible Health Plan (HDHP) at each of the Silver and Bronze levels. The 2023 standard plan designs are all continuing in 2024.

For each of the Silver standard plan designs, the cost-sharing reduction plan designs are also standard. Cost sharing reduction (CSR) plan designs were developed at each of the 73% (Federal), 77% (Vermont specific), 87% (Federal), and 94% (Federal) AV levels. There is uncertainty on whether the Vermont-specific CSR plans will be offered in 2024.

The State contracted with Wakely Consulting Group, LLC, an HMA Company (Wakely), to assist in the development of the 2024 standard plan designs and to provide an actuarial certification of the actuarial values of the state's standard plan designs that do not fit within the parameters of the Federal calculator and require adjustment. This memo documents the approved 2024 standard plan designs as well as the process for developing the corresponding actuarial values. The actuarial certification is provided in Appendix A.

The 2024 Notice of Benefit and Payment Parameters (NBPP) and Federal Actuarial Value Calculator (AVC) Model are still in draft form. Should there be changes between the draft and final versions, the plan designs reflected here may require changes. In addition, the IRS limits for HDHPs have not been released yet for 2024. Additional changes may be required to the Silver and Bronze HDHPs, should the plan designs presented here not comply with federal or state requirements.

A detailed list of the changes from the 2023 standard plan designs is in Appendix B. At a high level the changes for each base standard plan are:

 Platinum – The medical deductible and medical Maximum Out of Pocket (MOOP) were increased.

- Gold The pharmacy Maximum Out of Pocket (MOOP) was increased. The specialist, physical therapist/chiropractor, urgent care, ambulance, generic drug and preferred brand drug copays were all increased.
- Silver Deductible The combined medical/pharmacy MOOP and pharmacy only MOOP were increased.
- Bronze Deductible with Pharmacy Limit The combined medical/pharmacy MOOP and pharmacy only MOOP were increased.
- Bronze Deductible without Pharmacy Limit The combined deductible and combined MOOP were increased.
- Silver HDHP The embedded individual combined medical/pharmacy MOOP was increased. In addition, all medical coinsurances were increased 5%.
- Bronze HDHP The combined medical/pharmacy MOOP and the embedded individual combined medical/pharmacy MOOP were increased.

In addition to the standard plans, the State of Vermont requests that issuers offer a Gold plan where the deductible and MOOP are set at the same amount. This means that once the deductible is met, the plan pays 100% of all services. Unlike the standard plans, it is not required that issuers offer this plan, but it is highly recommended. The issuer may determine the amount at which to set the deductible and MOOP, as long as they are equal and the resulting plan falls in the Gold tier. Since the amounts are to be determined by the issuers, these plans are not included within this memo.

Regulatory Background

The ACA allows for a de minimis range around the target AVs for each metal level. The 2024 draft NBPP proposed a range of -2% to +2% for most plans. For example, any plan design that has an AV from 78% to 82% is considered a Gold plan. Consistent with the final 2023 NBPP, the 2024 draft NBPP proposed a smaller range for On-Exchange Silver plans of 0% to +2% (or an AV between 70% and 72%). Off-Exchange Silver plans would continue to be subject to the -2% to +2% range. The plan designs presented here comply with the proposed AV ranges. Bronze plan designs meeting certain criteria are eligible for an expanded range of +5% on the higher end, allowing an AV up to 65% compared to a high end at 62%. Plans that meet these criteria include HDHPs and plans that cover at least one major service, other than preventive, prior to the deductible. All three Bronze standard plans qualify for the expanded range.

The Center for Consumer Information and Insurance Oversight (CCIIO) released the draft 2024 Actuarial Value Calculator (AVC)¹ that issuers must use to determine the AV of a plan. The 2024 plan designs presented in this report are compliant with the draft 2024 AVC. However, should there be changes between the draft and final versions, changes may be required to be in compliance with the de minimis AV ranges. Changes to the plan designs will be dependent on the magnitude and direction of changes between the draft and final versions of the AVC.

The Annual Limitation on Cost Sharing was released in a separate guidance letter and has been finalized for 2024. The limitation will be \$9,450 for 2024, an increase of \$350 from the \$9,100 limit in 2023T

While CCIIO anticipates that most plans will be able to use the AVC without modification, some plan designs have features which are not supported by the AVC. In these instances, an actuary can either modify the inputs to most closely represent the plan design or an actuary can modify the results of the AVC to account for the features not supported by the AVC. An actuarial certification documenting the development of the AV for these designs is required.

The federal HDHP minimum deductible and MOOP limits are not yet released for 2024. The 2023 minimum deductible and MOOP were \$1,500 and \$7,500, respectively. The 2023 increases were significantly higher than the historical averages, where the deductible had increased \$50 every two to three years and the MOOP has increased around \$100 a year. We do not anticipate increases in the deductible for 2024 but should the minimum deductible differ when the limits are released, changes may be required to both HDHPs (and corresponding Silver CSR HDHPs). Since the HDHP MOOPs are below the 2023 maximum, it is not likely that any changes would be needed for any IRS changes to the 2024 MOOP limit.

CSR Loading

As of 2020, Act No. 88 (Bill S.19) requires the premiums of the Silver on-Exchange plans to reflect the cost of funding for CSR subsidies, following the announcement that federal funding would cease. This resulted in a "CSR load" to these plans such that the Silver premiums are higher than they would have been without the CSR load. For individuals who are not eligible for premium subsidies (and are therefore not protected from the CSR load), issuers offer "reflective" off-Exchange Silver plans whose premiums have not been increased for the CSR load and have only a minor difference in plan design compared to their on-Exchange counterparts. These plans will continue in 2024.

_

¹ http://www.cms.gov/CCIIO/Resources/Regulations-and-guidance/index.html

The Off-Exchange "reflective" plans will have a \$5 copay or 5% coinsurance increase on ambulance services compared to the on-Exchange plans. These differentials apply to both standard and non-standard Silver plans. A comparison of the standard Silver on and off-Exchange plan designs are shown in Appendix C. As ambulance services are not explicitly included in the AVC and the differences in cost sharing are minimal, there is no difference in the calculation of the federal AV for these plans. Unless otherwise noted, in the Appendices the cost sharing for ambulance services represents the on-Exchange plan design.

In the event there is a Silver plan approved with 100% coinsurance, the off-Exchange "reflective" plan will have a \$25 deductible and MOOP increase compared to the on-Exchange plan. Unlike the ambulance cost sharing above, this difference will impact the AV. The issuer submitting such a plan will need to ensure that both the on and off-Exchange plan designs fit within the AV requirements. Since this is for non-standard plans only, these plans are not included within this memo.

Chiropractic and Physical Therapy Copays

Act No. 7² requires that the copay for chiropractic and physical therapy services for Silver and Bronze metal level plans be between 125% and 150% of the copay applicable to services provided by a primary care provider (PCP). All of the Silver and Bronze Deductible plans are in compliance. HDHPs are exempt from the requirement since they are deductible and coinsurance based.

Limiting Out-of-Pocket Expenses for Insulin

Bill S.296³, an act relating to limiting out-of-pocket expenses for prescription insulin drugs, was introduced and passed by the senate in 2020. This act limits a member's total out-of-pocket responsibility to \$100 per 30-day supply for insulin prescriptions, regardless of the amount, type, or number of insulin medications prescribed for the beneficiary. This change cannot be accommodated by the Federal AVC as it does not allow for separate cost-sharing inputs for insulin drugs. These prescriptions would be included with non-insulin prescriptions in the data underlying the AVC. Therefore, we reviewed utilization, costs, and member cost sharing for insulin prescriptions for issuers in Vermont Health Connect to determine the impact of this limit. We have not adjusted the AVs reflected here for this change. However, we did confirm that all plan designs will continue to be within the required de minimis range for 2024. Additional information on the methodology used to determine the impact on AV is included in the Methodology section below.

² https://legislature.vermont.gov/Documents/2018.1/Docs/ACTS/ACT007/ACT007%20As%20Enacted.pdf

³ https://legislature.vermont.gov/bill/status/2020/S.296

Addition of Hearing Aid Coverage to EHBs

The Vermont EHBs were expanded for the 2024 year to include one set of prescription hearing aids every three years as well as annual hearing exams.⁴ The cost sharing for these benefits is to be standardized such that the hearing aids are covered with the same cost sharing as durable medical equipment (DME), and the annual exam is covered the same as a specialist office visit. This was determined to not impact actuarial values sufficiently to warrant an adjustment, but we recommend issuers add an explicit line for DME (which aligns with Outpatient Coinsurance) to assist in transparency.

Actuarial Value Considerations

A summary of Vermont's standard plan designs is in Appendix E. Five of the standard plan designs (and the cost-sharing reduction plan designs) have features not supported by the AVC and thus an actuarial certification is required. The remaining standard plan designs have features that may warrant an AV adjustment but no explicit adjustment or actuarial certification has been done for these plans. In developing these standard plan designs and the resulting actuarial certification, Wakely also followed applicable Actuarial Standards of Practice (ASOP) as detailed in Appendix D and including:

- ASOP No. 23 Data Quality;
- ASOP No. 25 Credibility Procedures;
- ASOP No. 41 Actuarial Communications;
- ASOP No. 50 Determining Minimum Value and Actuarial Value under the Affordable Care Act; and
- ASOP No. 56 Modeling.

Both Silver plans and all three Bronze plans have design features that are both significant and not supported by the AVC. The Silver cost-sharing reduction plan designs have similar features. While most plans have some subtleties in their design that are not supported by the AVC, CCIIO has stated and regulations dictate that modifications should be made only for substantial differences. The five potential substantial differences that Wakely considered include:

⁴https://governor.vermont.gov/press-release/federal-government-approves-expanded-coverage-vermont%E2%80%99s-essential-health-benefits

- Family deductible and MOOPs. There are two common types of applications for deductibles and MOOPs, commonly referred to in Vermont as stacked and aggregate. The data supporting the AVC is only at the member level, and thus most closely resembles the stacked application of deductibles and MOOPs, although the family stacked AV will be higher in most instances. Most HDHPs use the aggregate application of deductible and MOOPs, which can significantly lower the AV since a family of two would need to accumulate to a deductible that is twice that of a single contract. Note that if the family MOOP is more than the 2024 single limit of \$9,450, the MOOP must either be stacked or there must be an embedded individual MOOP of \$9,450. Wakely developed a model to account for aggregate family deductibles and has modified this model to account for stacked and embedded MOOPs for HDHPs. Thus, a specific adjustment has been made to the appropriate AVs for HDHPs.
- Vermont implemented a statute (H.559 Sec. 32. 8 V.S.A. § 4089) for prescription drug deductibles and MOOPs. The requirement mandates, in part, that the MOOP for prescription drug costs in any plan design shall not exceed the minimum deductible amount for HDHPs per Section 223(c)(2)(A)(i) of the Internal Revenue Code of 1986 (\$1,500 and \$3,000 for individual and family coverage in 2023, 2024 amounts not yet known). The requirement also states that for HDHPs the cost sharing benefit for prescription drugs must start after the minimum deductible amount for HDHPs (same \$1,500 and \$3,000 for individual and family coverage in 2023) is met, but the amount may be met with either medical or prescription drug claims. This means that for all HDHPs, for purposes of prescription drug coverage, the deductible is considered met when accumulated medical and drug claims reach \$1,500 for individual or \$3,000 for family, regardless of what the medical deductible amount is. Similarly, the MOOP for only drug claims (including amounts used to accumulate to the deductible) is \$1,500 or \$3,000, regardless of the amount of the overall MOOP which will include both drug and medical claims.

Since for an integrated deductible and MOOP, only one amount is able to be input in the AVC, the value of the lower drug deductible and MOOP cannot be modeled in the AVC. This statute has a significant impact on AV, particularly at the lower AV tiers where the difference between the medical and prescription drug deductible and MOOP is greater.

⁵ Stacked deductibles and MOOPs are typical in traditional deductible plans where the individual deductible and MOOP apply to each member of a contract and the family deductible and MOOP is used as a protection for contracts where multiple members have claims. For example, if the family MOOP is two times the individual MOOP but three members of a contract all would have reached their individual MOOP, it limits the family's liability to two times the individual MOOP.

Aggregate deductible and MOOPs are typical in HDHPs where all claims for all members of a non-single contract accumulate to the family deductible and MOOP. For two person or family contracts where only one member has significant claims, the member still must reach the higher deductible and MOOP amounts which makes the average member liability higher under an aggregate deductible.

Wakely has developed a model to account for Vermont's prescription drug regulation and thus, where appropriate, a specific adjustment has been made to the AVs using this model.

- The 2024 plan designs for all plans except the HDHPs and the Bronze Deductible plan with Pharmacy Limit include three free PCP or MH/SA office visits prior to application of member cost sharing. The AVC allows an input to begin primary care cost sharing after a set number of visits. However, the plan designs for 2024 include a combination of PCP and/or MH/SA office visits to ensure compliance with the requirements of the Mental Health Parity and Addiction Equity Act (MHPAEA). Since the AVC does not allow input for a number of free MH/SA visits, an adjustment to the output of the calculator is necessary. Therefore, we reviewed utilization of PCP and MH/SA office visits to determine the impact of the free visits. This review found that the impact was negligible for Platinum and Gold plans, as well as the CSR 87% and 95% plans, and therefore no adjustment was made for these plans. The impact to the Silver and Bronze without pharmacy limit plans and was worth up to 0.1%. Therefore, a specific adjustment has been made to the AVs for those plans.
- In the current market, most Vermont HDHPs waive the deductible for preventive prescription drugs. This is another plan feature not currently supported by the AVC. Wakely has not analyzed the exact portion of drugs this represents, and this may vary by issuer. The impact to AV would only apply to drug costs that would normally be incurred prior to the member reaching the deductible. Any costs after the deductible and MOOP are met would be similar to the AVC. It is possible that this design feature could have a significant impact on the AV. Based on high-level estimates, Wakely believes the impact to AV for this design feature is likely around 0.5%. Since Wakely did not quantify the exact adjustment of the preventive drug difference for HDHPs, Wakely did not make a specific adjustment but did make sure that any AVs developed for HDHPs were at least 0.5% below the high end of the de minimis range in order to account for this increased benefit. It is expected that the impact for these drugs would be highest for the Bronze plan where the deductible is highest and the impact would decrease as deductibles decrease (and AVs increase).

Given the issuers now have credible data on the portion of claims that are preventive prescription drugs, we requested that they review the appropriateness of this adjustment for the 2024 plan designs. Both issuers indicated that 0.5% was adequate and appropriate. Wakely is relying on the issuer's assessment and continues to make sure that any AVs developed for HDHPs are at least 0.5% below the high end of the de minimis range in order to account for this increased benefit.

 Bill S.296, an act relating to limiting out-of-pocket expenses for prescription insulin drugs. This act limits a member's total out-of-pocket responsibility to \$100 per 30-day supply for insulin prescriptions, regardless of the amount, type, or number of insulin medications prescribed for the beneficiary. This change cannot be accommodated by

the Federal AVC as it does not allow for separate cost sharing inputs for insulin drugs. These prescriptions would be included with non-insulin prescriptions in the data underlying the AVC. Therefore, we reviewed utilization, costs, and member cost sharing for insulin prescriptions for issuers in Vermont Health Connect to determine the impact of this limit. This review found that the impact was negligible for Platinum, Gold, and Silver plans and was worth up to 0.1% for Bronze plans.

Wakely did not make a specific adjustment for this requirement but did make sure that any AVs developed for Bronze plans were at least 0.1% below the high end of the de minimis range in order to account for this increased benefit. No adjustments were made to the de minimis range for the other metal levels. Additional information on the methodology used to determine the impact on AV is included in the Methodology section below.

There are other potential design features for which adjustments could be made. However, given the expectation that adjustments be made for only the most substantive deviations, Wakely does not believe additional adjustments are warranted. It is also important to note that the bucketing of claims and the methodology used to calculate the AVC are not always clearly defined. Thus, at times it is difficult to ascertain whether an adjustment is warranted and how that adjustment would be estimated.

As stated, Wakely made explicit adjustments to account for the stacked and aggregate family deductible/MOOP, the three free PCP and MH/SA office visits, and Vermont's prescription drug regulation. These adjustments are described in detail in the Methodology section. For the preventive prescription drug benefits, Wakely did not make an explicit adjustment but did allow cushion in the AV such that an increase of up to 0.5% would not result in the AV falling outside of the required range. For the insulin limitations on cost sharing, Wakely did not make an explicit adjustment but did allow cushion in the Bronze AVs such that an increase of up to an additional 0.1% would not result in the AV falling outside of the required range. The table below shows the acceptable range for each standard plan design after accounting for this cushion where an explicit adjustment was not made.

Table 1: Adjusted Acceptable Federal Actuarial Values

	Plan	Acceptable Range ¹	Final Adjusted AV
	Platinum	88.0%-92.0%	90.1%
	Gold	78.0%-82.0%	81.3%
Deductible Plans	Silver	70.0%-72.0%	70.7%
	Bronze (with drug limit)	58.0%-64.9%	62.0%
	Bronze (without drug limit)	58.0%-64.9%	64.8%
HDHD-	Silver - Embedded OOPM	70.0%-71.5%	71.3%
HDHPs	Bronze - Embedded OOPM	58.0%-64.4%	63.0%
	250-300% FPL (73% AV)	73.0%-74.0%	73.7%

Cost Sharing Reduction Plan Designs - Deductible Plans	200-250% FPL (77% AV) 150-200% FPL (87% AV) 133-150% FPL (94% AV)	77.0%-78.0% 87.0%-88.0% 94.0%-95.0%	77.3% 88.0% 94.9%
	250-300% FPL (73% AV)	73.0%-73.5%	73.5%
Cost Sharing Reduction	200-250% FPL (73% AV)	73.0%-73.5% 77.0%-77.5%	73.5% 77.5%
Plan Designs - HDHPs	150-200% FPL (87% AV)	87.0%-87.5%	87.5%
	133-150% FPL (94% AV)	94.0%-94.5%	94.3%

¹ Based on revised de minimis ranges in the draft 2024 NBPP

The table in Appendix F shows all plan designs for which adjustments were made, the adjustments considered, the original AV from the AVC, and the final adjusted AV.

Methodology

Since several of the standard plan designs have features not supported by the AVC, Wakely developed a model to capture the impact of these features on the AV. It was anticipated that the AVC would not accommodate all of the Vermont plan design features.

If a plan has substantive differences from what the AVC allows, there are two allowed approaches defined in the federal regulations. The first allows the actuary to adjust the inputs of the plan design to "fit" it into the AVC. The second allows the actuary to put in as many of the design features as possible into the AVC and then adjust the resulting AV to account for the unique design features. Wakely determined the second approach was most appropriate for the Vermont plan design differences. Thus for the plan designs where adjustments were made, Wakely first input as much of the plan design as possible into the AVC and then modified the resulting AV to account for the unique features.

The following discusses the model that Wakely developed and the process used to adjust the actuarial values from the AVC.

Vermont-Specific Adjustment Model

Anticipating the need to quantify some of Vermont's unique plan design features, Wakely developed a model that would account for both aggregate deductibles and MOOPs as well as quantify the impact of Vermont's prescription drug regulation. This model is updated every few years to capture recent Vermont-specific data. The current model was updated for the 2024 plan designs and includes Vermont-specific ACA data incurred in 2019. While 2020 data was available at the time of the update, given the COVID impact on claims for that year, it was decided that 2019 data would be a better dataset to use.

In developing the model, Wakely was provided with membership and medical and pharmacy claims data extracts from the Vermont Healthcare Claims Uniform Reporting and Evaluation

System (VHCURES). Filters were then applied to the data to target the most appropriate population for the model and reduce the number of records included. The data used included:

- Small group and individual ACA markets
- Allowed medical and prescription drug data that was incurred in 2019
- Product types HMO (non-Medicare risk), PPO, POS and EPO
- Excluded claims marked as denied, out-of-state, and duplicates

The methodology developed for the model does not use the traditional approach of continuance tables. When determining the paid claims and resulting actuarial value of the plan designs where the prescription drug regulation is a factor, the order in which the claims occur is important. Continuance tables fail to recognize the impact of the order of the claims on actuarial values. Thus, the model re-prices the claims based on the inputs provided in the model rather than rely on continuance tables.

The model allows a user to enter the following:

- Medical and Prescription drug deductible amounts for both individual and family contracts. These amounts can differ but the model assumes the amounts are always integrated, or that both medical and drug claims will accumulate to both deductibles, even if different amounts.
- Medical and prescription drug maximum out of pocket amounts for both individual and family contracts. These amounts can differ and the model allows for different treatment of the MOOPs as noted below.
- Medical and prescription drug coinsurance amounts. If the plan design includes copays, an effective coinsurance needs to be input.
- The structure of the deductibles and MOOPs. As can be seen in the table below, the model can distinguish between aggregate and stacked deductibles and MOOPs. It also allows for different accumulations of claims to the medical and prescription drug MOOPs. There are six structural selections available in the model, described in the table below. Option 5 is most closely aligned to the federal AVC. Option 6 represents the design of the Vermont HDHPs.

Table 2: Model Structures

	C	osts that Accumula	ate	
Options	Deductible	Maximum Out-of	-Pocket (MOOP)	Deductible / MOOP Type
		Medical	Rx	
1	Medical & Rx	Medical & Rx	Rx Only	Aggregate
2	Medical & Rx	Medical & Rx	Rx Only	Stacked
3	Medical & Rx	Medical Only	Rx Only	Aggregate
4	Medical & Rx	Medical Only	Rx Only	Stacked
5	Medical & Rx	Medical & Rx	Medical & Rx	Stacked
6	Medical & Rx	Medical & Rx	Rx Only	Aggregate Deductible /Aggregate MOOP with Embedded Ind MOOP (can also be used for Stacked MOOP)

Adjusted AV Calculations

Using the federal AV calculator and the model as outlined above, the following methodology was used to develop the adjusted AV calculations for the HDHPs:

- 1. The plan designs were entered into the AVC ignoring the separate prescription drug deductible and MOOP thresholds. The resulting AV is the unadjusted value, which does not account for the prescription drug regulations or the aggregate family deductible and MOOP levels.
- 2. The model was used to determine the revised AV.
- 3. The same plan design input into the AVC was input into the model. The model only allows for coinsurance. Since the HDHP designs include copays and/or different coinsurance amounts, an effective coinsurance was developed for each plan design. The effective coinsurance amounts were developed separately for medical and prescription drug services using the allowed weights and average cost per service from the federal AVC continuance tables for the relevant metal tier.
- 4. The model was normalized to the AVC for each plan design. This means the same plan design, ignoring the prescription drug thresholds and assuming a stacked family deductible and MOOP, was input into the model and the underlying data was adjusted to arrive at the same AV as the AVC. This was done to ensure the same starting AV in both models and to try to mirror the induced utilization in the AVC. The normalization factors were reviewed for reasonability and deemed reasonable given they are accounting for trend, regional differences in cost and utilization and induced utilization.

- 5. The plan design in the model was adjusted to lower the prescription drug deductible and MOOP inputs (if applicable) to the appropriate plan design amounts and also to adjust the prescription drug MOOP to only consider prescription drug claims (the medical MOOP amount continues to use both medical and prescription drug claims). The application of deductible and MOOP was also changed to use an aggregate family deductible and family MOOP with an embedded individual MOOP equal to \$9,450.
- The resulting AV from the model is used as the final AV for tier placement.

The model was intended only for HDHPs where medical and drug claims both accumulate to the deductible. The Bronze plan with the pharmacy limit⁶ and Silver deductible plans (and associated CSR plans) need to be adjusted to account for the lower prescription drug MOOP, but the deductible plan has separate medical and drug deductibles. Thus, the model was used but with a slight variation in methodology. The following highlight the differences in methodology used only for the Bronze and Silver Deductible plans.

- 1. Same as for HDHPs, as much of the plan design as possible was entered into the AVC. This is the unadjusted AV. The Bronze and Silver Deductible plans then need to be adjusted for the lower and separate prescription drug MOOP.
- 2. The model was used to develop the AV adjustments in a slightly different process than for the HDHPs.
 - a. Instead of normalizing the model to the AVC, the normalization factor for the Bronze or Silver HDHP was used.
 - b. The model cannot accommodate plan designs where both medical and drug claims do not accumulate to the deductible. Thus, the same plan design was entered into the model as in the AVC but the model selection indicated that both medical and drug claims accumulated to the deductible amounts.
 - c. The model was then re-run with the lower drug MOOP and to adjust the prescription drug MOOP to only consider prescription drug claims (the medical MOOP amount continues to use both medical and prescription drug claims). The model continued to use a stacked application for deductible and MOOP since it is a traditional deductible plan.
- 3. The final AV is the ratio of the AV from 2c and 2b applied to the AV from the AVC in 1.

_

⁶ Only the Bronze plan with the pharmacy limit needs to be adjusted. The Bronze plan without the pharmacy limit is not subject to the lower prescription drug MOOP and as such does not require an explicit adjustment to the AVC results.

Mental Health/Substance Abuse Office Limits with \$0 Cost Sharing

The 2024 plan designs for all plans except the Bronze Deductible plan with Pharmacy Limit and HDHPs include three free PCP or MH/SA office visits prior to application of member cost sharing. The AVC allows an input to begin primary care cost sharing after a set number of visits. However, the plan designs for 2024 include a combination of PCP and/or MH/SA office visits to ensure compliance with the requirements of the Mental Health Parity and Addiction Equity Act (MHPAEA). Since the AVC does not allow input for a number of free MH/SA visits, an adjustment to the output of the calculator is necessary. The table below reflects the adjustment made to each of the standard plan designs.

Table 3: Estimated Impact of 3 Free PCP and/or MH/SA Visits

Metal	Increase to AV
Silver Deductible	1.001
Bronze Deductible w/o Pharmacy Limit	1.001
Silver Deductible CSR – 73%	1.001
Silver Deductible CSR – 77%	1.001

The impact was also calculated for the Platinum, Gold, 87% Silver CSR, and 94% Silver CSR plans but given the lower copays, the impact the determined to be negligible. The following methodology was used to develop the impacts.

- Wakely developed a continuance table based on the number of office visits a member incurred in the year. Wakely utilized similar VHCURES data as described above, except the data reflects claims incurred in the 2018 calendar year. The same filters were applied as described above and the summary reflects the experience of almost 900,000 member months.
- 2. Wakely identified PCP and MH/SA office visits based primarily on a list of CPT codes. It was assumed that only the PCP and MH/SA office visit payments would be subject to the first 3 free visits. Specifically, we assumed that for any other services that may have the same cost sharing as PCP and MH/SA office visits, the reduced cost sharing would not apply (i.e., no changes for cost sharing for these services). Consistent with the AV Calculator, we also did not include other services that may happen in conjunction with an office visit (e.g. lab work) in our AV adjustment. It is our understanding that only the office visit copay would be waved and any copays for additional services incurred at the same time may still apply (e.g. copay stacking) based on the carrier's adjudication practices.

- 3. Two separate continuance tables were developed. The first reflects only claims identified as a PCP office visit and is consistent with the methodology of the AVC. The second is a combination of both PCP and MH/SA visits.
- 4. Based on the continuance tables, the cost share and paid claim amounts were calculated, assuming no member cost sharing applies for the first 3 visits. The difference between the paid amounts calculated utilizing the PCP only continuance table and PCP and MH/SA combined tables reflects the adjustment made to the AVC outputs.
- 5. Two AVs were calculated. The first was based on the unadjusted high level allowed and paid costs of the VHCURES data. This was done in total including both medical and pharmacy claims. The second, adjusted AV, added the additional paid costs from step 2 to the high level total paid claim amounts. The ratio of the two AVs is the increase applied to the federal AV. This was done separately for each standard plan design.

Appendix G includes screen shots from the AVC and the model for each plan design with an adjusted actuarial value. Also included is a summary of the AVs and in the instance of the Bronze and Silver Deductible plans, a calculation of the adjustment.

Insulin Out-of-Pocket Limit

As mentioned above, a bill has been introduced that would limit a member's total out-of-pocket responsibility to \$100 per 30-day supply for insulin prescriptions. The AVs reflected here have not been adjusted for this requirement. However, we did review the impact of the requirement and determined that all plan designs presented here would continue to meet the de minimis requirements.

Since insulin drugs only represent a portion of the claims in a given drug tier and only one input can be made in the AVC for each drug tier, the value of the cost sharing limit cannot be modeled in the AVC. This statute has a larger impact on AV at the lower AV tiers where the drug deductibles are higher. The estimated impact by metal tier is shown in the table below.

Table 4: Estimated Impact of Insulin Out-of-Pocket Limit

Metal	Increase to AV
Bronze	0.1%
Silver	0.0%
Gold	0.0%
Platinum	0.0%

The following methodology was used to develop the impacts:

- Both carriers, BCBS VT and MVP, provided claim-level data for insulin prescriptions based on their individual and small group experience in Vermont in 2019 and 2020. The data included metal tier, allowed and paid costs, days' supply, and member cost sharing. Each carrier also provided high-level market information for 2019 and 2020, including metal tier, member months, and total allowed and paid costs for medical and pharmacy.
- 2. Based on the claim-level data, the cost share and paid claim amounts were recalculated, assuming a limit of \$100 per prescription for a 30-day supply. The difference between the cost sharing in the experience data and the new cost sharing incorporating the limit was added to the paid claim costs.
- 3. Two AVs were calculated. The first based on the unadjusted high level allowed and paid costs. This was done in total including both medical and pharmacy claims. The second, adjusted AV, added the additional paid costs from step 2 to the high level total paid claim amounts. The difference in AV between these two is the increase to AV. This was done separately for each metal level.

Based on this analysis, the impact on all metal levels except Bronze is negligible. For the Bronze plans, all plan designs presented here are more than 0.1% below the high end of the de minimis range, therefore, will continue to be within the range.

Disclosures and Limitations

Responsible Actuary. Julie Peper and Darren Johnson are the actuaries responsible for this communication. Julie is a Member of the American Academy of Actuaries and a Fellow of the Society of Actuaries. Darren is a Members of the American Academy of Actuaries and a Fellow of the Society of Actuaries. Both meet the Qualification Standards of the American Academy of Actuaries to issue this report. Alex Jarocki also contributed significantly to this report.

Intended Users. This information has been prepared for the sole use of the State of Vermont and issuers within that state that will be submitting standard plan designs. Distribution to such parties should be made in its entirety. This report cannot be distributed to or relied on by any third party without the prior written permission of Wakely.

Risks and Uncertainties. The assumptions and resulting estimates included in this report and produced by the model are inherently uncertain. Users of the results should be qualified to use it and understand the results and the inherent uncertainty. Actual results may vary, potentially materially, from our estimates. Wakely does not warrant or guarantee that actual experience will tie to the AV estimated for the placement of plan designs into tiers. The developed actuarial values are for the purposes of classifying plan designs of similar value and do not represent the expected

actuarial value of a plan or pricing AV used to determine premium rates. Actual AVs will vary based on a plan's specific population, utilization, unit cost, and other variables.

Conflict of Interest. Wakely provides actuarial services to a variety of clients throughout the health industry. Our clients include commercial, Medicare, and Medicaid health plans, the federal government and state governments, medical providers, and other entities that operate in the domestic and international health insurance markets. Wakely has implemented various internal practices to reduce or eliminate conflict of interest risk in serving our various clients. Except as noted here, the responsible actuaries are financially independent and free from conflict concerning all matters related to performing the actuarial services underlying this analysis. In addition, Wakely is organizationally and financially independent to the state of Vermont.

Data and Reliance. We have relied on others for data and information used in the actuarial value adjustments. We have reviewed the data for reasonableness, but have not performed any independent audit or otherwise verified the accuracy of the data/information. If the underlying information is incomplete or inaccurate, our estimates may be impacted, potentially significantly. Below is a list of data and assumptions provided by others and assumptions required by law.

- The draft 2024 Federal AVC Model was relied on for the original AV. While reasonability tests have shown there are some assumptions and methodologies that are not consistent with expectations, the AVC was developed for plan classification and not pricing. Thus, the model is being used as such and we make no warranties for the accuracy of the AVs that result from the AVC.
- VHCURES data supplied by the state was used in the development of the HDHP model.
- Adjustment to the high-end of the de minimis AV range for HDHPs to account for prescription drugs for which the deductible is waived. This was reviewed by both issuers, BCBS VT and MVP, based on their internal experience and claims data.
- Insulin prescription claim experience. This was provided by both issuers, BCBS VT and MVP, based on their internal experience and claims data.

Subsequent Events. There are no known relevant events subsequent to the date of information received that would impact the results of this report, other than those discussed in the report and below.

• The federal HDHP minimum deductible and Maximum Out of Pocket (MOOP) limits are not yet released for 2024. The 2023 minimum deductible and MOOP are \$1,500 and \$7,500, respectively. The 2023 increases were significantly higher than the historical averages, where the deductible had increased \$50 every two to three years and the MOOP has increased around \$100 a year. We do not anticipate increases to the minimum deductible in 2024, but should the minimum deductible differ when the limits

are released, changes may be required to both HDHPs (and corresponding Silver CSR HDHPs).

- The 2024 Notice of Benefits and Payment Parameters (NBPP) is still in draft form. The
 plan designs presented are compliant with the 2024 draft NBPP and may need to
 change if there are differences between the draft and final versions.
- The 2024 Federal AVC Model is also still in draft form. The plan designs presented are compliant with the 2024 draft Federal AVC and may need to change if there are changes to the final model from the draft version.
- The Vermont Legislature is considering not offering the 77% AV CSR Variant plans in 2024.
- Other changes to regulations passed subsequent to this report.

Contents of Actuarial Report. This document and the supporting exhibits constitute the entirety of actuarial report and supersede any previous communications on the project.

Deviations from ASOPS. Wakely completed the analysis using sound actuarial practice. To the best of my knowledge, the report and methods used in the analysis are in compliance with the appropriate Actuarial Standards of Practice (ASOP) with no known deviations. A summary of ASOP compliance is listed in Exhibit D.

Exhibit A contains the formal actuarial certification. If you have any questions regarding this letter or the certification, please contact us.

Appendix A: Actuarial Certification

Actuarial Certification State of Vermont Actuarial Value of Standard Plan Designs Effective January 1, 2024

I, Darren Johnson, am associated with the firm of Wakely Consulting Group, LLC (Wakely), an HMA company, am an Associate of the Society of Actuaries and a member of the American Academy of Actuaries and meet its Qualification Standards for Statements of Actuarial Opinion. Wakely was retained by the State of Vermont to provide a certification of the actuarial value of the state's standard plan designs that are effective January 1, 2024 on Vermont Health Connect. This certification may not be appropriate for other purposes.

To the best of my information, knowledge and belief, the actuarial values provided with this certification are considered actuarially sound for purposes of § 156.135(b), according to the following criteria:

- The 2024 federal Actuarial Value Calculator was used to determine the AV for the plan provisions that fit within the calculator parameters;
- Appropriate adjustments were calculated, to the AV identified by the calculator, for plan
 design features that deviate substantially from the parameters of the AV calculator;
- The actuarial values have been developed in accordance with generally accepted actuarial principles and practices; and
- The actuarial values meet the requirements of § 156.135(b).

The assumptions and methodology used to develop the actuarial values have been documented in my correspondence with the State of Vermont. The actuarial values associated with this certification are for standard plan designs (Silver HDHP, Bronze HDHP, Bronze Deductible with Pharmacy Limit, Bronze Deductible without Pharmacy Limit, Silver Deductible, Silver HDHP CSR 73%, Silver HDHP CSR 77%, Silver HDHP CSR 87%, Silver HDHP CSR 94%, Silver Deductible CSR 73%, Silver Deductible CSR 77%, Silver Deductible CSR 87%, and Silver Deductible CSR 94%) that will be effective as of January 1, 2024 for individual and group coverage sold on Vermont Health Connect.

The developed actuarial values are for the purposes of classifying plan designs of similar value and do not represent the expected actuarial value of a plan. Actual AVs will vary based on a plan's specific population, utilization, unit cost and other variables.

In developing the actuarial values, I have relied upon the federal Actuarial Value calculator and data from the Vermont Healthcare Claims Uniform Reporting and Evaluation System (VHCURES). I did not audit the data provided; however, I did review the data for reasonableness and consistency.

Actuarial methods, considerations, and analyses used in forming my opinion conform to the appropriate Standards of Practice as promulgated from time-to-time by the Actuarial Standards Board, whose standards form the basis of this Statement of Opinion.

Darren Johnson

Darren Johnson, FSA, MAAA March 30, 2023

Appendix B: Summary of Plan Design Changes from 2023 Designs

	Deducti	ble Plans
Plan	Platinum	Gold
	Increase medical deductible from \$425 to \$450	Increase pharmacy MOOP from \$1,400 to \$1,500
	Increase pharmacy OOPM from \$1,400 to	Increase specialist office visit copay from \$50 to
Changes	\$1,500	\$55
		Increase PT/chiro copays from \$30 to \$35
		Increase urgent care copay from \$60 to \$65
		Increase ambulance copay from \$70 to \$75
		Increase generic Rx copay from \$12 to \$15
		Increase preferred brand Rx copay from \$55 to
		\$60

	Deductible Plans									
Plan	Silver	Bronze w/ Rx Limit								
Changes	Increase combined OOPM from \$9,100 to \$9,300	Increase medical OOPM from \$9,100 to \$9,450								
		Increase pharmacy MOOP from \$1,400 to \$1,500								
		Increase generic Rx copay from \$15 to \$20								

	Deductible Plans
Plan	Bronze w/o Rx Limit
	Increase medical deductible from \$9,000 to \$9,400
Changes	Increase combined OOPM from \$9,000 to \$9,400

	HD	HPs
Plan	Silver - Embedded MOOP	Bronze - Embedded MOOP
	•	Increase combined OOPM from \$7,100 to \$7,200
Changes	·	Increase embedded single OOPM from \$9,100 to \$9,450
	Increase embedded single OOPM from \$9,100 to \$9,450

Appendix D: Comments Relative to Applicable ASOPs

This appendix includes comments relative to the following applicable Actuarial Standards of Practice (ASOP).

- ASOP No. 23, Data Quality;
- ASOP No. 25, Credibility Procedures;
- ASOP No. 41, Actuarial Communications; and
- ASOP No. 50 Determining Minimum Value and Actuarial Value under the Affordable Care Act.
- ASOP No. 56 Modeling

ASOP 23: DATA QUALITY

- <u>3.1 Overview</u> VHCURES data was used as the basis for the HDHP model and Vermont-specific insulin prescription data was used as the basis for the insulin limit impact. This data source was deemed reasonable for the analysis discussed in the management report.
- <u>3.2 Selection of Data</u> The data was considered reasonable for our analysis subject to the following considerations
 - a. The data sources contained all material data elements.
 - b. The following considerations were reviewed as part of our analysis:
 - 1. Data was appropriate and sufficiently current.
 - 2. Data was reasonable and comprehensive of the necessary data elements.
 - 3. There were no known, material limitations of the data.
 - 4. No alternative data sets were reasonably available. The reliability of the data underlying our analysis did not require support from alternative data sets.
 - 5. Alternative data sets were not deemed necessary to complete the analysis.
 - 6. Sampling methods were not required.

- 3.3 Reliance on Data Supplied by Others Reliance is discussed in the management report to which this appendix is attached.
- 3.4 Reliance on Other Information Relevant to the Use of Data We relied on information contained in the report. We did not detect any material errors in the data provided and relied upon the data as part of our analysis.
- <u>3.5 Review of Data</u> We reviewed the data. Data definitions were included as part of the VHCURES data. Ultimately the data was reasonable with the adjustments discussed in our management report.
- 3.6 Limitation of the Actuary's Responsibility We did not audit the data.
- <u>3.7 Use of Data</u>– Use and adjustments to the data are discussed in this management report. In addition:
- a. We deem that the data are of sufficient quality to perform the analysis;
- b. The data did not require enhancement before the analysis could be performed
- c. The data was reasonable for the analysis and did not require adjustment beyond that discussed in the management report;
- d. We did not detect any material defects in any data source;
- e. The data were adequate to perform our analysis.

ASOP 25: CREDIBILITY PROCEDURES

The HDHP model uses data as its starting point. The experience used is fully credible and therefore no credibility blending or adjustments were necessary.

ASOP 41: ACTUARIAL COMMUNICATIONS

This report and the actuarial memorandum submitted are consistent with the guidance in ASOP 41.

3.1 General Requirements for Actuarial Communications

3.1.1 Principal and Scope of Engagement – These results were developed to comply with § 156.135(b) and should not be used for any other purpose. The distribution of this report to other users is limited to the State of Vermont.

- <u>3.1.2 Form and Content</u> The State of Vermont was the principal for this engagement and the scope of the engagement included developing and certifying the actuarial values for the standard plan designs as discussed in the management report.
- <u>3.1.3 Timing of Communication</u> This report is provided in conjunction with the actuarial certification of the submitted actuarial values.
- <u>3.1.4 Identification of Responsible Actuary</u> The responsible actuary is identified in the attestation and this management report.
- <u>3.2 Actuarial Report</u> This management report is an Actuarial Report as defined in this ASOP. Correspondence between Wakely and the State of Vermont as part of this engagement should also be considered part of the Actuarial Report.
- <u>3.3 Specific Circumstances</u> No constraints apply beyond any discussed in the attachment management report.
- <u>3.4 Disclosures Within an Actuarial Report</u> all relevant disclosures have been made in the management report. Consistent with this ASOP, we make specific mention to the following items here:
 - 3.4.1 Uncertainty or Risk Uncertainty is discussed in the management report.
 - <u>3.4.2 Conflict of Interest</u> Wakely is financially, organizationally, and otherwise independent from the State of Vermont and any reliant parties.
 - <u>3.4.3 Reliance on Other Sources for Data and Other Information</u> Reliance regarding data and assumptions are discussed in this management report.
 - <u>3.4.4 Responsibility for Assumptions and Methods</u> Assumptions and methods are discussed in the management report and the parties associated with the assumptions and methods have been delineated. Therefore, pursuant to this ASOP, no additional disclosure is necessary.
 - <u>3.4.5 Information Date of Report</u> -The management report lists the applicable dates for the analysis and correspondence.
 - <u>3.4.6 Subsequent Events</u> Subsequent events are listed in the Limitations and Disclosures section.
- <u>3.5 Explanation of Material Differences</u> Wakely has issued no other report regarding the development of these actuarial values. No comparison to prior results is necessary.
- <u>3.6 Oral Communications</u> No oral communication is considered part of this actuarial report. Any material assumptions or methods discussed in oral communications have been documented in written form as well.
- 3.7 Responsibility to Other Users Intended users of this report have been specifically noted in the document.

ASOP 50: DETERMINING MINIMUM VALUE AND ACTUARIAL VALUE UNDER THE AFFORDABLE CARE ACT

- 3.1 Use of AVC or MVC The federal AVC was used.
- 3.2 Exceptions to the AVC The federal AV was determined by making adjustments to the results of the federal AVC based on provisions that could not be appropriate modeled in the AVC.
- 3.3 Exceptions to the MVC Not applicable.
- <u>3.4 Evaluating Non-Standard Plan Designs</u> The HDHP model was normalized to the federal AVC.
- <u>3.5 Reasonableness of Assumptions for Non-Standard Plan Designs</u> The assumptions used to modify the federal AVs were reviewed for reasonability.
- 3.6 Unreasonable Results Not applicable.
- <u>3.7 Documentation</u> See ASOP 41 documentation above.

Consumer Disclosure about Proposed Health Insurance Rate Increase VT 2024 ACA Individual Exchange Rate Filing

About Us

MVP Health Plan, Inc. is a non-profit health care payer operating in Vermont and New York. MVP's mission is to provide high quality and affordable health care with a focus on wellness to our members.

Why We Are Changing Our Premiums

MVP must obtain approval from the Green Mountain Care Board for the health insurance premium rates charged. MVP files annual premium rates for the Exchange which are guaranteed for 12 months. This rate filing seeks approval of MVP's 2024 Individual Exchange rates for effective dates of coverage between January 1, 2024 and December 31, 2024. The premium rates filed reflect MVP's current estimate of the cost to provide health insurance for that coverage period. The filed premium rates may be higher or lower than the previously filed premium rates, however, premium rates generally increase over time. Changes in the filed premium rates (relative to previously approved rates) are driven by many factors, including:

- -Increases in base period experience. Premium rates are increasing by **3.4%** because our estimate of 2023 claims are higher than expected compared to the previous year.
- -Increases in cost and utilization of services. The cost and utilization of medical and pharmacy services generally increase over time. Premium rates are increasing by 7.5% because of this estimated trend in 2024.
- -Impact of the Federal Risk Adjustment Program. The federal risk adjustment program seeks to "level the playing field" among insurers. MVP has enrolled a population of lower-risk members, so it is required to pay into the program. MVP's individual payment has become less, decreasing premium rates by approximately 0.2%.
- -Changes in the cost of doing business. As the cost of doing business rises over time, MVP must collect a portion of the premium revenue to protect consumers by ensuring its solvency. MVP aligned its administrative costs with the expected cost of the individual market. These changes are worth approximately 1.3% of a premium increase.
- -Impact of the Leap Year. MVP is increasing rates by approximately **0.3**% to account for 2024 being a leap year (and having an additional day).

Conclusion

The proposed rates reflect an average rate adjustment to prior rates of 12.8%, ranging from 7.7% to 15.5%. There are 8,470 policyholders, 8,470 subscribers and 11,602 members impacted by this rate filing.

Vermonters can provide public comment on the proposed rate increases during the public comment period beginning on May 9th. For information about providing public comment, please visit https://ratereview.vermont.gov/public-comment

Please provide Company specific inputs for any cells shaded in blue.

¹ Vermont Statute 8 V.S.A. § 4062

(2)(A) In conjunction with a rate filing required by subsection (a) of this section, an insurer shall disclose to the Board:

- (i) for all covered prescription drugs, including generic drugs, brand-name drugs excluding specialty drugs, and specialty drugs dispensed at a pharmacy, network pharmacy, or mail-order pharmacy for outpatient use:
- (I) the percentage of the premium rate attributable to prescription drug costs for the prior year for each category of prescription drugs;
- (II) the year-over-year increase or decrease, expressed as a percentage, in per-member, per-month total health plan spending on each category of prescription drugs; and
- (III) the year-over-year increase or decrease in per-member, per-month costs for prescription drugs compared to other components of the premium rate.
- (B) The insurer shall provide, if available, the percentage of the premium rate attributable to prescription drugs administered by a health care provider in an outpatient setting that are part of the medical benefit as separate from the pharmacy benefit.

Pharmacy Benefit Manager Information²

Please list any pharmacy benefit managers utilized for the following periods. Include additional lines as necessary.

	Experience Period -1	Experience Period	Projection Period
	01/01/2021-12/31/2021	01/01/2022-12/31/2022	1/01/2024-12/31/202
Pharmacy Benefit Manager #1	CVS/Caremark	CVS/Caremark	CVS/Caremark
Pharmacy Benefit Manager #2			
Pharmacy Benefit Manager #3			
Pharmacy Benefit Manager #4			

For each period, enter the PBM, if applicable, administering pharmacy benefits at a pharmacy, network pharmacy, or mail-order pharmacy for each drug tier.

	Experience	e Period -1	Experienc	ce Period	Projectio	n Period
	01/01/2021	-12/31/2021	01/01/2022-	12/31/2022	1/01/2024	-12/31/202
	Retail	Mail	Retail	Mail	Retail	Mail
Non-Specialty Generic PMPM						
Non-Specialty Brand PMPM						
Specialty PMPM						

For each period, enter the PBM, if applicable, administering drug benefits by a health care provider in an outpatient setting as part of the medical benefit as separate from the pharmacy benefit for each drug tier.

	Experienc	e Period -1	Experienc	ce Period	Projectio	n Period
	01/01/2021	-12/31/2021	01/01/2022-	12/31/2022	1/01/2024	-12/31/202
	Retail	Mail	Retail	Mail	Retail	Mail
Non-Specialty Generic PMPM						
Non-Specialty Brand PMPM						
Specialty PMPM						

² Vermont Statute 8 V.S.A. § 4062

(2)(A) In conjunction with a rate filing required by subsection (a) of this section, an insurer shall disclose to the Board:
(C) The insurer shall include information on its use of a pharmacy benefit manager, if any, including which components of the prescription drug coverage described in subdivisions (A) and (B) of this subdivision (2) are managed by the pharmacy benefit manager, as well as the name of the pharmacy benefit manager or managers used.

MVP Health Care -- 2024 Individual Exchange Rate Filing

MVP Health Plan, Inc. 2024 Vermont Individual Exchange Rate Filing For Effective Dates Beginning Between January 1, 2024 - December 31, 2024

Exhibit 1 -- Summary of Medical Coplans Offered

Exhibit 1a -- Comparison of 2023 to 2024 Benefits

Exhibit 2a -- Pricing Trend Assumptions

Exhibit 2b -- Support for Rx Trend Assumptions used in Development of Index Rate

Exhibit 3 -- Index Rate Development

Exhibit 4 -- Conversion Factor and Tier Ratios

Exhibit 5 -- Retention Loads and Paid Claim Surcharges

Exhibit 6 -- 2024 Premium Rates

Exhibit 1 -- Summary of Medical Coplans Offered

MVP Health Plan, Inc. 2024 Vermont Individual Exchange Rate Filing For Effective Dates Beginning Between January 1, 2024 - December 31, 2024

Services subject to deductible (DD) unless otherwise stated.

"First 3 PCP Office Visits are not subject to deductible

"First 3 PCP Office Visits are not subject to deductible

"First 3 PCP Office Visits are convered in full

Services provided by a tribal facility are convered in full for non-HDHP plans. For HDHP plans, services are covered in full if provided by a tribal facility after the deductible is met.

Generic Dugs are Covered in full grup age (1), after Pharmacy deductible is met.

Family structure is \$9.450 for each member up to family limit.

Exhibit 1a -- Comparison of 2023 to 2024 Benefits by Plan

MVP Health Plan, Inc. 2024 Vermont Individual Exchange Rate Filing For Effective Dates Beginning Between January 1, 2024 - December 31, 2024

Re: 2024 Vermont Exchange Rate Filing - Individual

SERFF Tracking #: MVPH-133660955

Dear Ms. Hughes:

This letter is in response to your correspondence received 05/11/23 regarding the above-mentioned rate filing. The responses to your questions are provided below.

1. Please provide the RATEE report from CMS.

Response: This response has been determined to be confidential and will be provided under separate cover.

2. For each individual plan, provide the calculated benefit relativity and projected enrollment distribution by HIOS variance and presence of APTC.

Response: Please see the attached Excel file for quantitative support. We have listed each HIOS with the state CSR suffixes, the projected enrollment based on February 2023 membership, the calculated benefit relativity, and the percentage of members receiving APTC.

If you have any questions or require any additional information, please contact me at cpontiff@mvphealthcare.com.

Sincerely,

Christopher Pontiff, FSA, MAAA

Senior Director, Commercial Pricing, Network & Trend Actuary

MVP Health Care, Inc.

Re: 2024 Vermont Exchange Rate Filing - Individual

SERFF Tracking #: MVPH-133660955

Dear Ms. Hughes:

This letter is in response to your correspondence received 05/18/23 regarding the above-mentioned rate filing. The responses to your questions are provided below.

1. Please provide detailed quantitative and qualitative support for the 2023 & 2024 medical unit cost trend assumption separately for Vermont providers that are governed by the GMCB and all other providers. The support for the providers governed by GMCB should reconcile to the approved budget changes for FY23 (https://gmcboard.vermont.gov/node/3183), and include an explanation and support for any differences. The support for all other providers should include the data and any adjustments that were made to the data to determine the best estimate of unit cost changes.

Response:

Facility Trends

For Facility (Inpatient and Outpatient) trends, facilities can generally be bucketed into three categories:

- 1. Vermont facilities under GMCB jurisdiction
- 2. Facilities MVP negotiates contractual discounts with directly but are not under GMCB jurisdiction
- 3. Facilities under a rental network arrangement, facilities that are non-participating, or facilities where discounts are negotiated on a claim-by-claim basis.

The starting point for MVP's facility trends in this rate filing is facility claims processed for all Vermont individual members for the calendar year 2022.

For facilities under GMCB jurisdiction, MVP is using the approved rate increases as referenced above, with the following exceptions:

Central Vermont Medical Center (CVMC)

The Green Mountain Care Board approved a 2.7% mid-year budget increase for fiscal year 2023, after approving 12.5% originally for CVMC. This increase was applied to the second half of 2022, so MVP is reflecting 14.0% in 2023 for both IP and OP.

Rutland Regional

In Appendix 2 to Rutland Regional's budget submission the standard requested changes were 18.1% for IP, 17.3% for OP, and 19.4% PHY, for a total commercial increase of 17.8%. This submission was approved at 17.4% and therefore MVP is reflecting the proportional increase for each area of service: 17.7% for IP and 16.9% for OP.

University of Vermont Medical Center (UVMC)

The Green Mountain Care Board approved a 2.5% mid-year budget increase for fiscal year 2023, after approving 14.8% originally for UVMC. This increase was applied to the second half of 2022, so MVP is reflecting 16.2% in 2023 for both IP and OP.

Since 2023 had exceptionally high hospital budget increases, 2024 medical unit cost trend assumptions were assumed to be equal to the approved budgets from 2022. The trends for facilities under the GMCB's jurisdiction are 15.6% IP / 14.3% OP for 2023/2022 and 5.4% IP / 5.0% OP for 2024/2023.

Overall facility trends are calculated using a weighted average based on 2022 utilization and are 12.3% IP / 12.5% OP for 2023/2022 and 5.9% IP / 5.1% OP for 2024/2023. Please see the tab "Facility Trends" in the attached Excel workbook for the quantitative derivation of the trends.

Physician Trends

MVP has a few different contracting partners for physician claims in Vermont, including medical groups in VT/NH/NY, individual physicians participating in MVP's network, and physicians outside of MVP's network. The following physician groups are under the GMCB's jurisdiction: UVMMC, Porter, Rutland and CVMC. Those trends match the approved GMCB rate increases for 2023, with the same exceptions previously explained. 2024 trends are assumed to be equal to 2022 trends for these providers.

All the other groups participating with MVP reflect MVP's best estimate of negotiated payment rates for 2023 and 2024, including claims for Vermont members at New York physician groups.

The individual trends are weighted together using 2022 experience for all Vermont individual members (in a similar fashion to the facility trends). The resulting physician trend is 6.6% for 2023/2022 and 3.1% for 2024/2023. Please see the "Physician Trends" tab in the attached Excel workbook for a quantitative derivation of this calculation.

2. We acknowledge the following from page 5 of the Actuarial Memorandum: "MVP analyzed historical medical utilization trends for its VT block of business and determined that the data has been too volatile in recent years to use for medical utilization trend purposes. MVP attributes this volatility to the significant membership growth for this block of business and COVID-19." Please provide the analysis of the historical medical utilization trends. This analysis should include quantitative and qualitative components.

Response: MVP used the triple exponential smoothing forecasting method for analyzing historical utilization patterns and projecting them to the rating period. MVP has experienced rapid membership growth in this block of business in the recent past, which may influence the results of historical trend methodologies. The utilization data is aggregated into rolling 12-month time periods at the service category level and adjusted for age/gender based on the Milliman age/gender table. The data inputs as well as the model outputs for the service categories can be seen on tabs "Question #2 Inpatient", "Question #2 Outpatient", and "Question #2 Physician" in the provided excel workbook. The results of the blended distribution can be seen in tab "Question #2 Aggregate" in the provided excel workbook. MVP has determined that the range of utilization trends forecasted by the model is too large to have confidence in the result.

3. Please provide quantitative and further qualitative support for the utilization, unit cost, and deductible leveraging Rx trends in Exhibit 2b.

Response: MVP is provided with pharmacy trend estimates by its Pharmacy Benefit Manager, CVSHealth. These trends are run for all of MVP's Vermont fully insured membership (ACA and Large Group) and use historical utilization and unit cost data for those populations. This historical data is combined with CVSHealth estimates of changes in utilization, unit cost and generic dispensing rates to calculate their best estimate of Gross PMPM claim cost trends for 2023 and 2024. MVP also applies its best estimate of contract changes between the experience period and the rating period to the unit cost information using a trend model provided by CVSHealth. Please see the attached exhibit (CONFIDENTIAL MVP_Vermont_4Q2022_CSTM_02162023) which provides CVSHealth's best estimate of trends as of the time of the filing.

The individual cost components (unit cost and utilization by Generic/Brand/Specialty) are included in the Rx Trend Summary in Exhibit 2a for 2023 and 2024. The trends are annualized and match those on Exhibit 2b. The individual cost components are calculated as follows:

Generic: Unit Cost trend is represented by Generic Non-Specialty Cost/Day trend which is found in cell L46 on Page 1 (2023) and Page 2 (2024) of the attached. Generic Non-Specialty Gross Cost PMPM Trend can be found in cell J46 on Page 3 (2023) and Page 4 (2024) of the attached. Utilization is then calculated by taking Gross Cost PMPM Trend divided by the unit cost trend.

Brand: Unit Cost trend is represented by Brand Non-Specialty Cost/Day trend which is found in cell M46 on Page 1 (2023) and Page 2 (2024) of the attached. Brand Non-Specialty Gross Cost PMPM Trend can be found in cell F46 on Page 3 (2023) and Page 4 (2024) of the attached. Utilization is then calculated by taking Gross Cost PMPM Trend divided by the unit cost trend. The impact of brand drugs moving to generic is implicitly covered under the cost/day trend under this methodology. This reflects the utilization of the current drug being re-weighted from the brand bucket to the generic bucket.

Specialty: Utilization trend is represented by Specialty Utilization trend which is found in cell N47 on Page 1 (2023) and Page 2 (2024) of the attached. Specialty Gross Cost PMPM can be found in cell G47 on Page 1 (2023) and Page 2 (2024) of the attached. Specialty unit cost trend is then calculated by taking Gross Cost PMPM Trend divided by the utilization trend.

CVSHealth buckets non-Specialty drugs by the first 2 characters of the GPI and Specialty drugs using their proprietary Rx Navigator methodology. The individual contribution of these buckets to Gross Cost PMPM trend can be found in column I of Page 1 (2023) and Page 2 (2024) of the attached. The Other bucket for non-Specialty claims includes all GPI categories not explicitly listed and the other bucket for Specialty claims include all conditions not explicitly listed.

MVP uses the trend factors calculated above and applies them to the experience period cost per script and scripts per 1,000 members to compute an annual paid trend. Scripts per 1,000 is trended using the utilization trends, while the allowed cost per script and coinsurance cost per script amounts are trended using the unit cost trends. Copay per script amounts are not trended and the deductible per script amounts are trended using the paid leveraging factor.

All of these trended items are then converted to a PMPM using the formula (projected cost per script * projected scripts per 1,000 members / 12,000) and the projected paid claims PMPM is calculated as the difference between the projected allowed claims PMPM and the sum of the cost sharing PMPM amounts. The total (24 month) paid trend (gross of rebate changes) is then calculated as the projected paid claims PMPM divided by the experience period paid claims PMPM. The paid claims net of pharmacy rebates is calculated as the projected net paid claims PMPM divided by the experience period net paid claims PMPM.

The amounts paid under the deductible by members in the experience period are converted to a per script basis. This per script amount is then trended and converted to a projected PMPM as explained above. The trend factor used for this line item is equivalent to the annualized trend factor for claims under the deductible on the medical side, the derivation of which can be found in the response to Question #6.

4. Please provide the historical annual Rx trends observed from 2020-2022, as well as the actual-to expected ratio for the Rx trend in each year.

Response: Please see the following table for this trend analysis. Trends are taken from the most recent rate filing where a trend occurred (for instance, the 2021 to 2022 expected trend is taken from the 2023 VT Exchange filing). Also note that actuals and expected in the table below reflect both small and individual data since our PBM provides us with one trend for Vermont.

While reviewing the table, it is important to note that this is a risk-adjusted population, and MVP's membership and demographic mix have changed considerably over the period being measured. Therefore, reviewing the actual-to-expected trends in isolation does not indicate the impact of these trends on MVP's financial performance.

Comparison of Actual to Expected Pharmacy Allowed Trend, 2020 to 2022, VT Exchange

Year	Actual	Expected	Difference
2022/2021	20.7%	11.4%	8.3%
2021/2020	13.7%	5.3%	8.0%
2020/2019	21.7%	5.8%	15.0%

5. The annualized trend using the first four service categories of the URRT is 8.8%, which is slightly different from the 8.9% shown in Exhibit 2a. Please reconcile.

Response: The allowed claim percentages used to develop this trend on Exhibit 2a are mistakenly a percentage of claim expense. We propose correcting this upon the resubmission of rates with the GMCB decision. Another difference is that the claims used to develop the trend on Exhibit 2a do not include dental, so only the first three service categories of the URRT should be considered. In addition, rounding on the URRT is causing a variance.

6. Provide quantitative support for the 1.062 trend factor applied to the claims for the deductible in Exhibit 2a.

Response: To value the impact of trend on claims under the deductible level, MVP utilized the probability distribution function table from its benefit relativity model that corresponds to all medical and pharmacy claims (except for preventive services covered in full). The average cost per claim band was calculated both with and without the total allowed claim trend from the filing, and the "deductible value" is calculated as:

[Sum product of average claim band and frequency for bands below the deductible] PLUS [Deductible level times probability of claims above the deductible].

The deductible trend is then calculated as the change in the "deductible value" from the experience period to the rating period.

The total deductible trend is calculated as:

[Sum product of the deductible trend for a plan based on its single deductible level and that plans experience period membership] Divided by [Total experience period membership]

The quantitative derivation of the trend factor has been determined to be confidential and has been provided under separate cover.

7. Please provide quantitative support for the Benefit Actuarial Value and Induced Demand reflected in Index Rate in Exhibit 6.

Response: Please see the tab "Question #7" in the attached Excel document for a quantitative derivation of the experience period average Benefit Relativity and Induced Demand factor. The relativities for all plans are calculated using the same benefit relativity model that is used to price the 2024 plans, and the induced demand factor is calculated using a similar methodology as the rate filing.

The average factor is calculated by member-weighting the product of the benefit relativity model actuarial value and induced demand factor, consistent with prior filings.

8. Please provide the national study performed by Wakely Consulting Group for the impact of the National High Cost Reinsurance Pool.

Response: This response has been determined to be confidential and will be provided under separate cover.

9. For each month from January 2021 through March 2023, please provide the total allowed costs, member months, and any normalization factors appropriate to normalize for changes in unit costs, population age factors, and induced utilization.

Response: Please see the tab "Question #9" in the attached Excel document which provides this information. The age normalization reflects the age curve created by HHS and the induced demand normalization factors reflect the induced demand slope MVP uses to price (which complies with HHS guidelines). The unit cost normalization reflects the best estimate of unit cost trends from the most recent filing that a trend was presented (i.e. 2022/2021 trend is from the 2023 Exchange filing, as opposed to the 2022 Exchange filing).

MVP would like to note that any changes to allowed claims for a risk-adjusted population should include a review of risk adjustment payments and receipts. MVP's risk adjustment payments as a percentage of allowed claims have increased over this period and this will serve to deflate allowed trends above and beyond analysis of a static population.

10. Please provide the bad debt as a percentage of premium for 2022.

Response: Please see the tab "Question #10" in the attached Excel document for historical actual bad debt information.

11. As shown in the Experience Period Claims section of the Actuarial Memorandum, please provide qualitative and quantitative support for the increase in "Other Medical Expenses not in claim warehouse" and "Net Reinsurance Expense". Please elaborate on what is driving the increased amounts for these two items compared to last year's filing.

Response: The increase in "Other Medical Expenses not in claim warehouse" between the 2023 and 2024 rate filing is driven by an increase in claim settlements. Settlements happen when contract implementation may be retroactive or there is mass re-adjudication needed on claims. Settlements are used to limit member cost share abrasion. These amounts must be added to the expenses since there would've been increased claim expense if not paid as a settlement. Please see the table below.

	2024 Rate Filing	2023 Rate Filing
Claims Settlement	\$3.29	\$0.81
Other Items	\$2.09	\$2.57

The increase in net reinsurance expense is due to a change in methodology. In previous filings, MVP expressed net reinsurance as the projected reinsurance premium multiplied by 1 minus the target loss ratio of the reinsurer. This assumed that MVP would recover the same percentage every year and it would be stable. The methodology has been altered to be consistent with the methodology used for the CMS national reinsurance program. This methodology is to remove any recoveries from the experience period adjusted for any reinsurance program changes and then add in the expectation of the premium. Since MVP did not have any corporate reinsurance recoveries in 2022, the calculation of the 2024 estimate of net reinsurance is just the 2024 premium, which is estimated to be \$0.75 PMPM.

12. Please provide further qualitative and quantitative support for the adjustment on lines 11-16 of Exhibit 3. This should include a derivation of the calculated impact, disclosure of all assumptions made, as well as support and/or sources used as a basis for assumptions made.

Response:

Line 11- Adjustment for Waived Cost Share Due to COVID-19

MVP is removing \$1.40 PMPM to account for cost sharing related to the COVID-19 pandemic including treatment, visits, and testing that was waived during the experience period. Cost sharing will shift back to the members in 2024 with the unwinding of the public health emergency. Please see the tab "Question #12 Waived Cost Share" in the attached Excel document for further support. There was no cost share on any COVID-19 related claims in 2022, so a cost share factor based on historical utilization was developed and applied to the COVID services.

Line 12- Adjustment for COVID Testing

MVP is assuming a 10% reduction in Covid testing costs in the projection period due to a utilization decrease, resulting in the removal of \$0.31 PMPM. We expect demand for testing to decrease once cost sharing is reinstituted. Please see the tab "Question #12 COVID Testing" in the attached Excel document for further support.

Line 13- Adjustment for COVID Vaccines

It is expected commercial payers will have to pay the full ingredient cost of Covid vaccines by 2024. MVP is taking 2022 experience and increasing it by \$130/\$40, the expected ingredient cost in 2024 over what we pay currently. This results in the additional \$2.29 PMPM. This can be found at https://www.kff.org/coronavirus-covid-19/issue-brief/how-much-could-covid-19-vaccines-cost-the-u-s-after-commercialization/. Please see the tab "Question #12 COVID Vaccines" in the attached Excel document for further support.

Line 14- Adjustment for Hearing Aids as EHB

Hearing aids have been added as an essential health benefit in 2024. MVP analyzed historical experience in its New York population and used a two-year average to calculate the additional \$0.34 PMPM. Please see the tab "Question #12 Hearing Aids" in the attached Excel document for further support.

Line 15- Adjustment for Abortions Covered in Full

Vermont has mandated coverage of abortions without cost sharing except before the deductible on HDHPs. MVP analyzed its historical VT experience for this block and used a two-year average to calculate the additional \$0.02 PMPM. Please see the tab "Question #12 Abortions" in the attached Excel document for further support.

Line 16- Adjustment for Telemedicine Benefit Expansion

Telemedicine is now covered in full on all plans. The Consolidation Appropriations Act of 2023 allowed the extension of safe harbor before the deductible for all telehealth, even for HDHPs. Our benefit relativity model accounts for this so the expansion of telemedicine for all HDHPs is reflected in the AV of the plan. Based on the cost share MVP took in 2022, this benefit is an additional \$0.02 PMPM on the rate. Please see the tab "Question #12 Telemedicine" in the attached Excel document for further support.

13. Please provide the incurred and paid claims PMPM for COVID testing, COVID vaccinations, and COVID treatment costs, separately by incurral month from January 2022 through December 2022. Similarly, please provide the projected incurred and paid claims PMPM for COVID testing, COVID vaccinations, and COVID treatment costs for calendar year 2024.

Response: Please see the tables below for the experienced monthly claims associated with COVID visits, testing, vaccinations, and treatment costs and the projected costs for 2024.

COVI	COVID Incurred Claims PMPM Experience								
Incurred									
Month	Testing	Vaccines	Treatment	Visits					
202201	\$9.65	\$1.98	\$12.98	\$2.89					
202202	\$3.67	\$0.50	\$1.68	\$0.81					
202203	\$2.81	\$0.33	\$0.52	\$1.09					
202204	\$3.18	\$1.35	\$4.36	\$0.72					
202205	\$3.42	\$1.12	\$1.44	\$1.11					
202206	\$1.97	\$0.65	\$0.50	\$0.94					
202207	\$1.69	\$0.65	\$1.18	\$0.55					
202208	\$1.56	\$0.43	\$1.19	\$0.69					
202209	\$1.48	\$1.28	\$1.98	\$1.21					
202210	\$1.98	\$1.75	\$2.77	\$0.49					
202211	\$1.85	\$1.36	\$1.33	\$0.59					
202212	\$3.38	\$0.85	\$0.94	\$1.13					

COVID Projection	on			
	Testing	Vaccines	Treatment	Visits
Experience Period Incurred PMPM	\$3.12	\$1.02	\$2.65	\$1.03
Adjustment due to Cost Share Changes	-\$0.54	\$0.00	-\$0.37	-\$0.49
Adjustment due to Utilization/Unit Cost Changes	-\$0.31	\$2.29	\$0.00	\$0.00
2024 Projection	\$2.27	\$3.31	\$2.28	\$0.55

14. We acknowledge the following from page 9 of the Actuarial Memorandum: "We studied the migration of silver CSR members to other plans over time. We also compared the premium relativities of other metal levels to silver as proposed and in prior years. Based on this information, we did not make a membership shift in response to the change in CSR loading." Please provide the study of silver CSR member migration. This analysis should include quantitative and qualitative components.

In addition to this we compared the difference between the second lowest cost silver plan and the plans in metal levels above using 2023 final and 2024 proposed rates. The bottom table shows that the additional member premium required to buy up in metal level will grow from a minimum of \$85.23 in 2023 to \$119.10 in 2024. This combined with the membership shift data described above led to the assumption of no predictable membership shifts as a result of the proposed rates.

15. Please provide quantitative and qualitative support for the calculation of the CSR load applied to the 2024 proposed rates and elaborate on why the load varies by silver plan.

Response: There is no explicit load for the CSR applied to the 2024 proposed rates. Per the GMCB guidance, instead of a flat load to all silver plans based on the CSR amounts not received from the federal government, we are applying the member weighted average benefit richness of silver members, inclusive of the CSR adjusted benefits. The "Question #15" tab In the attached excel file shows the calculation of the weighted average AV for each silver plan. The load varies by plan due to the membership at each of the CSR levels varying by silver plan. This results in an actuarially sound rate for each plan.

16. We acknowledge the following from page 10 of the Actuarial Memorandum: "MVP is aware that the Medicaid continuous enrollment provision will not continue in 2024. We have decided not to assume a membership or morbidity change for this. We expect the impact to be the same as the overall market wide morbidity impact which we do not have data to project or support." Considering that most enrollees moving from Medicaid to ACA will be eligible for CSR plans, please justify the assumption that there will not be any Medicaid members electing silver CSR plans therefore shifting a greater portion of membership into silver CSR plans.

Response: MVP has no data to support that most enrollees moving from Medicaid to ACA would be eligible for CSR. In the event that is correct, we still don't believe that is sufficient information to determine an impact on rates. If there was an assumption of more members into CSR plans, that would raise the overall member weighted benefit richness of the book of business but it would also come with a proportional increase to the paid index rate. These two adjustments would offset each other to result in no impact on rates to the non-silver metal levels, while the silver plans would feel the impact of the difference between the plan average AV before and after the shift assumption. Our concern is that there is no data to suggest which CSR levels members would enter at. For example, if there was an

influx of members at the 73 CSR level, it would reduce the silver premiums, while an influx of 94 CSR members would increase the silver premiums. There is no data to support any assumption of that granularity and as a result we determined the current average AV by silver plan to be representative of the projection period.

17. Please provide the average age factor for MVP's individual market for 2022 and 2023.

Response: Please see the table below for the average HHS age factor for this market in each year. Note that 2023 membership data only includes through February.

Age Factors for MVP's Individual Market								
Year	Year Average Age Factor							
2022	1.809							
2023	1.829							

18. Please provide a breakdown of the assumed general administrative load of \$52.74 shown in Exhibit 5 by expense category.

Response: Please see the table below which provides a breakout of the administrative expense by major category.

VT Individual Administrative Expense by Category							
	2024 Admin PMPM						
Personnel Expenses	\$31.76						
Software	\$3.47						
Consulting/Project Expenses	\$3.26						
All Other Administrative Expenses	\$14.26						
Total	\$52.74						

19. Please provide the company's historical RBC ratio for a minimum of three years.

Response: Please see the table below.

MVPHP RBC Ratio							
Year	Actual						
2020	429.4%						
2021	354.0%						
2022	369.3%						

20. Please provide the historical actual to expected profit margin for a minimum of three years.

Response: See the table below for the historical actual to expected profit margin in the individual market. The actual margin was calculated on a run rate basis instead of a financial statement basis to best represent our premiums and claims in each period.

VT Indi	VT Individual Actual to Expected Profit Margin							
Year	Actual	Expected (Approved)						
2019	-1.0%	1.5%						
2020	4.4%	1.0%						
2021	-10.6%	0.5%						
2022	-9.4%	1.0%						

If you have any questions or require any additional information, please contact me at cpontiff@mvphealthcare.com.

Sincerely,

Christopher Pontiff, FSA, MAAA

Senior Director, Commercial Pricing, Network & Trend Actuary

Re: 2024 Vermont Exchange Rate Filing - Individual

SERFF Tracking #: MVPH-133660955

Dear Ms. Hughes:

This letter is in response to your correspondence received 06/05/23 regarding the above-mentioned rate filing. The responses to your questions are provided below.

1. Regarding question #4 in Objection Letter 2: What were the primary driver(s) of the higher Rx trends in 2020-2021 and, separately, 2021-2022?

2. Regarding question #5 in Objection Letter 2: Please elaborate on exactly what corrections need to be made to Exhibit 2a and the URRT. Further, please disclose any impact this has on the proposed rates.

Response: No corrections need to be made to the URRT, but the percent of allowed claims on Exhibit 2a in cells C20:C22 and C29:C31 should be edited to reflect the actual percentages. Please see these values in the table below. This brings the annual allowed medical trend to 8.8%. The rate change would be 12.58% instead of 12.76% if this change was made in isolation but will have a different impact on the rate in the presence of other changes that may be ordered.

	2023 Annual Trend	
	% of Allowed Claims	
IP	17.9%	
OP	54.4%	
PHY	27.7%	
		_
	2024 Annual Trend	
	2024 Annual Trend % of Allowed Claims	
IP		
	% of Allowed Claims	
IP	% of Allowed Claims 18.1%	

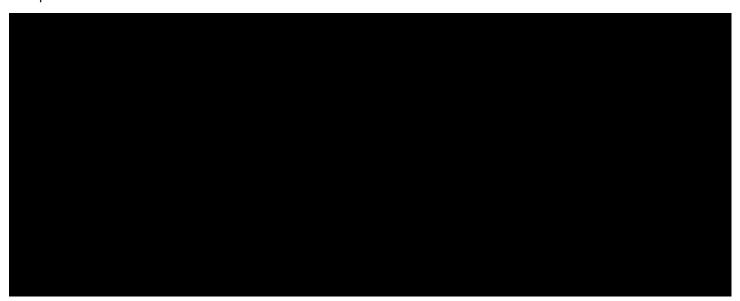

- 3. Regarding Line 13 in question #12 in Objection Letter 2:
 - a. Why wasn't a utilization reduction assumption applied to treatment and visits due to the removal of waived cost sharing, as was done for testing?
 - b. The table provided, "Adjustments to Make to Experience Period Data due to Vaccines" indicates 165,128 member months. Please also provide the number of distinct members and the number of distinct COVID-19 vaccine utilizing members.

Response: Testing is more elective and there are multiple available alternatives to obtain a test. Therefore, the change in cost sharing could affect the member's purchasing behavior. The utilization of treatment and visits is not as elective and therefore we believe there wont be a decrease in utilization due to the cost sharing being turned back on. The number of distinct members in our individual population was 16,844, of which 4,166 utilized COVID-19 vaccines.

4. Regarding question #14 in Objection Letter 2: Membership shifts for 2020 to 2021 and 2021 to 2022 were provided. Please also provide the membership shift between metal levels for 2022 to 2023, using the current enrollment distribution.

Response:

5. Regarding question #18 in Objection Letter 2: Please provide a similar breakdown of the general administrative load for actual 2022 expenses.

Response: Please see the table below which provides a breakout of the administrative expense by major category.

VT Individual Administrative Expense by Category									
	2022 Actual Admin PMPM								
Personnel Expenses	\$29.26								
Software	\$4.31								
Consulting/Project Expenses	\$3.55								
All Other Administrative Expenses	\$11.14								
Total	\$48.26								

6. The Federal Act Memo states that there is a +0.05% allowed claim cost impact for plan design changes related to the impact of hearing aids as EHB. However, the "Plan Design Changes" adjustment factor in the URRT is 1.000. Please confirm that this is due to URRT rounding.

Response: This is due to URRT rounding.

- 7. Regarding the historical SHCE admin PMPM provided in the Actuarial Memorandum:
 - a. What were the driver(s) of the significant increase in administrative costs PMPM in 2021?
 - b. In the rate-year 2022 filing (filed in 2020), it was stated that in 2022 MVP would take on the billing and payment processing functions, resulting in an increase to the administrative costs PMPM. However, the actual 2022 administrative costs PMPM decreased by approximately \$3 PMPM. Please reconcile.

Response:

- a. The main drivers of the increase in administrative costs in 2021 was investment in product/benefit research and development as well as projects related to expanded provider relations in Vermont.
- b. MVP did incur additional fees as a result of taking on billing, however that was offset by other efficiencies achieved within our operational areas by combining billing and enrollment functions that offset the total anticipated increases.
- 8. We are aware of an updated actuarial certification from Wakely for the 2024 Standard Plans due to IRS-release final H.S.A. limits for 2024. Please either confirm that the noted revisions are included in the submitted rate filing or list each revision and provide the calculation of the resulting rate impact. If the latter, do not provide fully revised documentation (URRT, Act Memo, Exhibits, etc.) at this time.

Response: All of the revisions due to the IRS releasing final limits for 2024 were not included in the submitted rate filing. Please see the list of revisions below as well as the rate impact.

		Before			Individual

If you have any questions or require any additional information, please contact me at cpontiff@mvphealthcare.com.

Sincerely,

Christopher Pontiff, FSA, MAAA Senior Director, Commercial Pricing, Network & Trend Actuary

June 19, 2023

Ms. Traci Hughes, FSA, MAAA Lewis & Ellis, Inc. 700 Central Expressway South, Suite 550 Allen, TX 75013

Re: 2024 Vermont Exchange Rate Filing - Individual

SERFF Tracking #: MVPH-133660955

Dear Ms. Hughes:

This letter is in response to your correspondence received 06/05/23 regarding the above-mentioned rate filing. The responses to your questions are provided below.

1. Regarding the response to question #2 in objection letter 3: If the changes to Exhibit 2a decrease the rate change to 12.58% within the pricing file, but there are no changes to the URRT, the URRT will still indicate the rate changes of 12.76% and the two will not match. As a result of the initial changes, anything else within the pricing file or URRT be affected, such as leveraging or the paid-to-allowed ratio in the pricing file or the AV/CS in Wksh 2 of the URRT? The two files will need to show the same rate change. Please reconcile.

Response: When MVP stated no changes to the URRT it was meant in context of the trends. An adjustment is needed on worksheet 2 in the AV and Cost Sharing Design on Plan line as a result of a change in the expected paid to allowed ratio. This change will result in the two files matching.

2. MVP assumes that the cost of the COVID-19 vaccine in 2024 will be \$130, which is the high end of the \$110 to \$130 range from the KFF publication referenced in the actuarial memorandum. Please further explain the choice to assume a \$130 cost per vaccine, instead of, for example, the midpoint of \$120.

Response: MVP understood the KFF publication to suggest that the ingredient cost would be \$110-\$130 and the administration cost to be between \$25-\$40. MVP is assuming that the total cost of the vaccine in 2024 would be \$130, which is why we have increased the cost of vaccines by \$130/\$40 and not \$170/\$40. We are not speculating the ingredient separate from the administration but believe that in total the vaccine will cost \$130 in 2024. If the administration was assumed to be constant at \$40 then the implied ingredient cost would be \$90 which is below the range provided by KFF.

3. Please provide the number of COVID-19 treatments and visits, separately, for each month from January 2021 through May 2023 (or the most recent month available).

Response: Please see the table below for the number of COVID-19 treatments and visits. We have provided January 2021-February 2023 as of February 2023. This data is consistent with the data used to derive assumptions for the rate filing. Please note that there was no attempt to complete the number of claimants for the months without full runout. This should be taken into account when analyzing the results.

	Coun	t of Claims
Incurred	Covid	Covid
Month	Visits	Treatment
1/31/2021	605	57
2/28/2021	326	37

1/31/2023	63	41
2/28/2023	30	17

4. A recent study by NORC at the University of Chicago (https://www.ahip.org/resources/medicaidredetermination-coverage-transitions) estimated that 8.1% of those losing Medicaid coverage in VT will purchase an individual plan. Of that 8.1%, 2.6% will be direct purchase, 4.2% will be subsidized marketplace, and 1.3% will be unsubsidized marketplace. Please further justify MVP's choice to assume no membership shift, specifically into Silver and Silver CSR plans, as a result of the Medicaid redeterminations, while taking this study into consideration.

Response: The referenced study doesn't speak to metal level or plan richness decision making. While it is possible that 4.2% come in as subsidized marketplace there is no data to support what metal level the members will buy into

ased on our

distribution of membership we believe there is nothing pointing to an increase in the silver metal level. Increasing membership at the same proportion as our membership today will have no impact on rates.

5. Please explain why MVP is not assuming any membership shift into Bronze plans as a result of the new CSR guidance for 2024.

Response: MVP does not feel there is any data to support a membership shift from Silver to Bronze

Ve also

reel that the difference between the second lowest cost silver plan and the Bronze plans has not changed in a significant enough manner relative to last year to induce any membership changes outside of what we have seen in the past.

6. Please explain why MVP expects no members to see value in moving from a Silver CSR plan to the lowest Gold plan as result of the new CSR guidance for 2024.

Response: It is not that MVP expects no members to see value in moving from Silver to Gold, but that MVP does not expect significant membership shifts from one metal to another in aggregate. It is possible that some members will find value in moving from Silver to Gold, but there might also be other members that aren't realizing the value in Gold, or due to financial reasons feel the need to shift back to Silver or Bronze. The answers to questions 5 and 6 are related and result in MVP coming to the conclusion that some members might see value in moving up a metal, while others might see value in moving down, but we don't believe our proposed rates create a scenario where there is a high likelihood of movement that is significantly different than historical trends, and therefore doesn't necessitate an adjustment to the filing.

In our actuarial memorandum we stated "Our current proposed relativities do not indicate there is a further incentive for members to move to a different metal level. We studied the migration of silver CSR members to other plans over time. We also compared the premium relativities of other metal levels to silver as proposed and in prior years. Based on this information, we did not make a membership shift in response to the change in CSR loading." This statement is driving the decision to not assume a membership shift from either silver to gold or silver to bronze.

If you have any questions or require any additional information, please contact me at cpontiff@mvphealthcare.com.

Sincerely,

Christopher Pontiff, FSA, MAAA

Re: MVP Health Plan, Inc. GMCB-004-23rr

2024 Individual Market Rate Filing SERFF No. MVPH-133660955

MVP Health Plan, Inc. GMCB-005-23rr

2024 Small Group Market Rate Filing SERFF No. MVPH-133660956

Dear Mr. Barber:

This letter is in response to your correspondence received 06/07/23 regarding the above-mentioned rate filings. The responses to your questions are provided below.

1. In our decision last year, MVP was ordered to include "detailed information on the efforts it has taken to encourage enrollment through VHC and the effectiveness of these efforts" in its 2024 individual rate filing. Provide this information.

Response:

The answer below was prepared by our marketing department.

2021

- Targeted letters sent to approximately 1,400 Vermont members in April of 2021. This was a collaborative, multi-carrier effort with VHC
- Boosted Social Media
 - o Facebook Post 1 (June 4 June 18): Reach of 1,861 with 515 engagements
 - Facebook Post 2 (June 17 June 30): Reach of 6,408 with 72 engagements
 - o Instagram Post (June 10 June 30): Reach of 4,028 with 918 engagements
- Paid Search
 - o June: 5,143 searches, 78 conversions
 - July: 17,126 Searches, 284 conversions
- Banner ad on SHOP page launched in June. This directed individuals to VHC for more information on ARPA
- Copy added to mvphealthcare.com/Vermont, directing members to VHC for more information about the subsidies
- 2022 Individual Lead Packets, Individual OE renewal materials, and VT OE Acquisition DM featured information about ARPA
- Targeted email sent in August to 940 Vermont members had a 52.26% open rate

2022

- Targeted emails for Vermont Town Halls; both emails had more than a 50% open rate
- FAQs for Customer Care in preparation of VHC Press Release

2023

- Renewal notices, which go out annually to all Vermont Individual plan members
- Lead packet cover letters, which is a tool for prospective members requesting information from MVP
- 2. Provide MVP's 2022 Supplemental Health Care Exhibit.

Response: Please see the provided attachment, MVPHP VT SHCE.

3. For the most recent year for which data are available (please specify), provide the dollar value of payments and the percentages of payments made by MVP under each alternative payment model category below across MVP's individual and small group plans and identify the relevant program or payment arrangement(s).

Response: Please see the table below.

2022			
HCP-LAN Category	Program or Payment Arrangement(s)	\$ value	% of total
Category 1: FFS-No link to Quality	and Value		
1: FFS-No link to Quality & Value		\$173M	75%
Category 2: FFS-Link to Quality	and Value		
2A: Foundational payments for infrastructure & operations		\$0	0%
2B: Pay for reporting		\$0	0%
2C: Pay for performance		\$0	0%
Category 3: APMs Built on FFS A	rchitecture		
3A: APMs with shared savings	OneCare VT	\$59M	25%
3B: APMs with shared savings and downside risk		\$0	0%
3N: Risk based payments NOT linked to quality		\$0	0%
Category 4: Population-Based F	Payment		
4A: Condition-specific population-based payment		\$0	0%

4B: Comprehensive population-based payment	\$0	0%
4B with reconciliation to FFS and ultimate accountability for TCOC	\$0	0%
4B with NO reconciliation to FFS	\$0	0%
4C: Integrated finance & delivery system	\$0	0%
4N: Capitated payments NOT linked to quality	\$0	0%

4. Explain whether MVP observed an increase in cancellations or shifts in enrollment by metal level due to the high premium increases in 2023.

Response: MVP did have a decrease in membership from 2022 to 2023. Both the Small Group and Individual markets contracted in size over the same time period, so it is hard to say how many of the members left to go to a competitor due to the premium increases, left to the level funded market, or were able to obtain government funded coverage.

MVP also saw a general increase in the lower cost metal levels as a percentage of membership. Buydown from one metal level to another is not something that would be attributed to solely high premium increases in 2023, but instead is something that generally happens over time with any increase of health care costs. Also, the membership growing as a percentage in the lower metal levels doesn't mean members are moving there, it could just be members leaving the higher metal levels and obtaining coverage elsewhere.

There are many reasons members may not be enrolled in the same metal level in the following year and we don't feel it is appropriate to attribute that solely to the high premium increases in 2023.

5. Describe how MVP prospectively assesses its solvency and explain how the projected contribution to surplus from each filing and MVP's prospective assessment of solvency would be impacted if the rates were reduced by 1%, 2%, 3%, 4%, and 5% (assuming no corresponding decrease in costs).

Response: The answer below was prepared by our Finance department.

In accordance with New York State's Enterprise Risk Management (ERM) requirements, MVP assesses its prospective solvency in relation to its risk profile. To calculate the target capital position for each year, MVP aggregates regulatory capital, risk capital and an additional capital buffer. Regulatory capital requirements are assessed based upon actual and projected premiums. The risk capital is determined based upon the Company's annual Risk Control Self-Assessment and stochastic modelling methods. The additional capital buffer is 5% of the sum of both the regulatory capital and the risk capital estimates. MVP's available capital is the sum of its actual and projected reserves which are calculated based upon MVP's actual and projected performance in the Company's regulated entities.

MVP annually requests premium rates that are believed to be actuarially sound and developed in accordance with actuarial standards of practice based on all available information at the time rates are developed. The GMCB's

Actuary does a thorough review of the rates for actuarial soundness. While MVP's Actuary may disagree on occasion with the GMCB's Actuary, those disagreements are grounded in sound actuarial principles.

Health Plans take tremendous risk when guaranteeing premium rates for an insured population as they must pay for all covered benefits regardless of cost. A risk margin is standard actuarial practice and part of premium rate development to account for adverse deviation in projected costs as well as a means to adhere to minimum regulatory reserve requirements.

When regulators reduce actuarial sound premium rates to remove risk margins and to 'make premiums more affordable' it compromises a Health Plan's ability to serve members and remain a viable option in the marketplace.

Below is a summary of MVP's performance over the past 5 years. MVP has collectively lost \$31M in the past 5 years and is anticipating a significant loss in 2023. The GMCB has contributed to this loss by way of year over year non actuarial sound cuts to MVP's requested premium rates.

Year	Operating Margin	Medical Loss Ratio
2018	(\$0.7M)	92.2%
2019	(\$1.8M)	93.3%
2020	\$17M	86.4%
2021	(\$23M)	101.1%
2022	(\$22.3M)	101.9%
Cumulative 2018-2022	(\$30.8M)	94.7%
2023 Projection (as of Jan23)	\$(14.3M)	

MVP is a diversified not for profit insurer doing its best to serve New York and Vermont customers across multiple lines of business. Each of the markets we serve must be self-sustaining over the long run and be expected to contribute to a healthy (not excessive) overall reserve level. Markets that do not have that expectation due to circumstances outside of MVP's control will be reevaluated. New York Regulators do not expect MVP's New York Markets to subsidize Vermont Markets or vice versa.

A healthy reserve position allows for continued risk taking, innovation and reinvestment. It allows MVP to achieve our Mission, Vision and Purpose which is to improve health and provide peace of mind, create healthier communities and find a better way to help our members achieve their best health through innovation.

As of 12/31/2022 MVP Health Plan had total net assets of \$413.5 million on \$3.14 billion in revenue. The reserves as a percentage of premium was at 13.16%. NYS requires that we maintain a 12.5% reserve ratio vs premiums earned. MVP has an RBC of 369%. Since premiums need to increase each year just to keep up if the cost of care increases we must maintain a profit margin just to maintain our current reserve position. A 1% reduction in Vermont premiums is worth approximately \$2.75M in lost reserves. A 5% reduction would yield a very significant loss of \$13.75M. Continuing losses in VT Small Group and Individual products are not sustainable for MVP. Our for profit competitors are much larger and better capitalized then MVP. Regional not for profit plans must remain profitable in order to serve the communities we work and live in.

- 6. The Board is interested in better understanding how MVP reimburses non-hospital affiliated providers in its service area and what MVP has assumed in the filings regarding reimbursement increases for these providers. To that end,
- a. Describe the mechanisms by which MVP reimburses non-hospital-affiliated providers. For example, does MVP use fee schedules? If so, how many fee schedules does MVP maintain and what types of services or providers does each apply to?
- b. Describe the magnitude and timing of any reimbursement increases for nonhospital-affiliated providers expected between now and the end of 2024, identify where in the filing these increases are reflected, and explain whether the increases will be across-the-board or targeted to certain providers or codes.
- c. How does MVP define each provider type and how does this definition relate to the "professional" premium category of the URRT?

Response:

- a. For non-hospital-affiliated providers, MVP signs agreements addressing the fee schedule under which the provider's claims will be reimbursed. The most common fee schedule used is based on percentage of Medicare RVU. In several service types such as Behavioral Health, Physician Therapy, Occupational Therapy, MVP and the providers can agree on a fee schedule of flat fees for each service. MVP maintains more than 1000 different fee schedules for providers in Vermont, varied by line of business, product type and provider specialty for over 60 different provider groups we have relationships with.
- b. The vast majority of MVP's contracts renew on January 1st. The estimated impact of these renewals is built into the physician trend in the rate filing. It is possible that providers may ask for or propose new fee schedules to MVP off cycle. The nature of the increases can vary by provider and what fee schedule they are currently on.
- c. The 'professional' provider type in the URRT is all services that are not inpatient or outpatient. This is analogous to "PHY" trend in our rate filing. Everything medical that is not Inpatient or outpatient is defined as physician.
- 7. Explain how, if at all, MVP assesses the equity and sufficiency of payments across care settings.

Response: The answer below was prepared by our Network department.

To ensure parity across the network for like services, MVP created a fee exception committee that meets bi-weekly to review any reimbursement requests that deviate from our standard fee schedule. This committee requires that the contract manager provide documented justification and analytics for granting an exception, which is based on the criteria below. The committee then determines if the request will be approved, denied or negotiated further. The information and decisions are also tracked in a database which is maintained by Network Management. In terms of payment sufficiency, MVP does evaluate rates based on competitive intelligence and/or provider feedback. As an example, behavioral health providers in Vermont had notified us that our rates had not kept up with industry standards the past few years and upon further evaluation, MVP did grant a significant increase to the BH community fee schedule in 2022 to remain competitive in the VT market.

- 8. The Board is interested in understanding how charge increases allowed in the individual and small group filings compare to actual charge increases implemented by MVP. To that end, please provide, in a table format for each year since 2014:
- a. The charge increases for non-hospital-affiliated providers allowed in MVP's individual and small group filings and the actual increases implemented by MVP. Explain any variances.
- b. The charge increases for hospitals allowed in the rate filing and the actual increases implemented by MVP. Explain any variances.

Response: MVP has a document retention policy of 6 years for rate filing related documents and therefore only has this information back through 2016. That information is provided below.

Year
2016
2017
2018
2019
2020
2021
2022

b. Please see the table below. The slight variations seen below are due to the hospital budgets being finalized after the rate filings, and therefore can create variances between the rate filing and the approved trends.

Year
2016
2017
2018
2019
2020
2021
2022

If you have any questions or require any additional information, please contact me at cpontiff@mvphealthcare.com.

Sincerely,

Christopher Pontiff, FSA, MAAA

Re: 2024 Vermont Exchange Rate Filing - Individual

SERFF Tracking #: MVPH-133660955

Dear Ms. Hughes:

This letter is in response to your correspondence received 06/22/23 regarding the above-mentioned rate filing. The responses to your questions are provided below.

1. In advance of the CMS final risk adjustment report to be released on 6/30, can MVP provide an updated risk adjustment transfer and the estimated impact on the requested rate increase?

Response: Using the provided risk transfer payment estimate of \$11,875,495 for the individual market and receipt of \$7,545 for catastrophic, the requested rate increase changes from 12.76% to 11.43%. The impact of this change may be different if made in conjunction with other ordered changes.

If you have any questions or require any additional information, please contact me at cpontiff@mvphealthcare.com.

Sincerely,

Christopher Pontiff, FSA, MAAA

Um Part

Re: MVP Health Plan, Inc. GMCB-004-23rr

2024 Individual Market Rate Filing SERFF No. MVPH-133660955

MVP Health Plan, Inc. GMCB-005-23rr

2024 Small Group Market Rate Filing SERFF No. MVPH-133660956

Dear Mr. Barber:

This letter is in response to your correspondence received 06/22/23 regarding the above-mentioned rate filings. The responses to your questions are provided below.

1. Please demonstrate the impact of "known contract changes" for 2023 and 2024 reflected in the Rx unit cost trends for these filings. Ind. Actuarial Mem. at 5: SG Actuarial Mem. at 5.

2. In responses to HCA Questions 3 and 4 dated June 27, 2022, in the dockets GMCB-005-22rr and 006-22rr, MVP stated that its contract with its current pharmacy benefit manager (PBM) runs through December 31, 2023. MVP also stated that its PBM contract has "annual market check provisions" that enable MVP to survey the market and negotiate contract enhancements. Please detail the outcome of any MVP "market check" MVP performed on its PBM in the last 12 months.

3. Please demonstrate the impact of any contract enhancements that MVP negotiated with its PBM in the last 12 months for the Vermont individual and small group books of business.

- 4. Regarding the passage of Vermont Act 131 (2022):
 - a. Did MVP evaluate whether its PBM has complied with the requirements of Act 131? If so, please provide an explanation of the manner in which this evaluation was completed. If not, explain why not.
 - b. Please explain the impact of Act 131's requirements on MVP's rates.

Response:

- a. MVP works with our PBM to construct a grid that tracks compliance of each provision in Act 131.
- b. MVP is making no adjustments to the rate filing due to Act 131. If the PBM believes it will impact overall cost or utilization, that would be reflected in the pharmacy trends.
- 5. On page 35 of its January 15, 2023, report regarding PBMs, the Department of Financial Regulation stated that, "read in a light most favorable to patients, the statutory language [if Act 131] suggests that Vermont health plans must apply copay assistance to patient deductibles." For policies subject to these rate filings, state whether MVP applied copay assistance to member deductibles.

Response: MVP's PBM processes the pharmacy claims and based on our tracking is compliant with Act 131, which includes applying copay assistance to member deductibles.

6. Please document the impact, if any, of allowing copay assistance to apply to member deductibles on these filings.

Response: There is no impact to the rate filing for this additional plan liability.

7. We note MVP's current RBC ratio is well above the level that would trigger regulatory action. Please provide support for the assertion that 1.5% CTR is required in these filings to maintain "statutory reserve requirement for MVP's VT block of business." Ind. Actuarial Mem. at 8; SG Actuarial Mem. at 8.

Response: The answer below was prepared by our Finance department.

Health Plans take tremendous risk when guaranteeing premium rates for an insured population as they must pay for all covered benefits regardless of cost. A risk margin is standard actuarial practice and part of premium rate development to account for adverse deviation in projected costs as well as a means to adhere to minimum regulatory reserve requirements.

When regulators reduce actuarial sound premium rates to remove risk margins and to 'make premiums more affordable' it compromises a Health Plan's ability to serve members and remain a viable option in the marketplace.

Below is a summary of MVP's performance over the past 5 years. MVP has collectively lost \$31M in the past 5 years and is anticipating a significant loss in 2023.

Year	Operating Margin	Medical Loss Ratio
2018	(\$0.7M)	92.2%
2019	(\$1.8M)	93.3%
2020	\$17M	86.4%
2021	(\$23M)	101.1%
2022	(\$22.3M)	101.9%
Cumulative 2018-2022	(\$30.8M)	94.7%
2023 Projection (as of Jan23)	\$(14.3M)	

MVP is a diversified not for profit insurer doing its best to serve New York and Vermont customers across multiple lines of business. Each of the markets we serve must be self-sustaining over the long run and be expected to contribute to a healthy (not excessive) overall reserve level. Markets that do not have that expectation due to circumstances outside of MVP's control will be reevaluated. New York Regulators do not expect MVP's New York Markets to subsidize Vermont Markets or vice versa.

A healthy reserve position allows for continued risk taking, innovation and reinvestment. It allows MVP to achieve our Mission, Vision and Purpose which is to improve health and provide peace of mind, create healthier communities and find a better way to help our members achieve their best health through innovation.

As of 12/31/2022 MVP Health Plan had total net assets of \$413.5 million on \$3.14 billion in revenue. The reserves as a percentage of premium was at 13.16%. NYS requires that we maintain a 12.5% reserve ratio vs premiums earned. MVP has an RBC of 369%. Since premiums need to increase each year just to keep up if the cost of care increases we must maintain a profit margin just to maintain our current reserve position. Continuing losses in VT Small Group and Individual products are not sustainable for MVP. Our for profit competitors are much larger and better capitalized then MVP. Regional not for profit plans must remain profitable in order to serve the communities we work and live in.

8. Describe MVP's negotiations with hospitals subject to GMCB regulation for FY2023. MVP's answer should identify any savings off the GMCB approved rates and quantify the impact of these savings on medical cost trend in these rate filings.

9. MVP selected the upper end of the range (\$130 ingredient, \$40 administration) for both ingredient cost and administration of the Covid vaccine, resulting in a \$2.29 PMPM Ind and \$2.32 PMPM SG charge. What would the PMPM be if the low end of the range (\$110 ingredient, \$25 administration) were selected?

Response: MVP is assuming that the total cost of the vaccine in 2024 would be \$130, which is why we have increased the cost of vaccines by \$130/\$40 and not \$170/\$40. We are not speculating the ingredient separate from the administration but believe that in total the vaccine will cost \$130 in 2024. This value is lower than the low end of the range stated above. If the low end of the range were selected, the result would be \$2.42 PMPM Ind and \$2.45 PMPM SG.

10. Provide support for the increase in administrative costs from \$47.10 to \$52.74 PMPM Ind. And \$38.75 to \$44.62 PMPM SG.

Response: The answer below was prepared by our Finance department.

The figures stated above represent an increase over two years, from 2022 to 2024. MVP, like other organizations in the US, has been affected by the tight labor market and has had to improve its compensation and benefit packages to attract and retain staff. According to various economic research, this tight US labor market was mainly caused by general declines in the labor force, primarily among older workers (ages 55+) who had left the workforce and women who have provided care for other family members. We are hopeful that these macroeconomic issues are resolving themselves so that future increases will be more in line with historical levels. Additionally, the COVID pandemic has required MVP to invest in more software technologies to support market expectations around new digital service capabilities.

11. Please quantify the impact of MVP's Quality Improvement/Cost Control programs, estimated cost of which is 6% to 7% of administrative expense. Ind. Actuarial Mem. at 8; SG Actuarial Mem. At 8.

Response: The answer below was prepared by our Quality department.

Quality Improvement initiatives aim to improve member health outcomes through the delivery of timely, equitable, and patient-centered healthcare. As a result, Quality Improvement initiatives reduce the risk of adverse events, lower health care costs, and improve patient satisfaction and safety. Lastly, they ensure organizations, such as MVP, are following laws and regulations enacted by the various regulatory agencies we are accountable to.

If you have any questions or require any additional information, please contact me at cpontiff@mvphealthcare.com.

Sincerely,

Christopher Pontiff, FSA, MAAA

Re: 2024 Vermont Exchange Rate Filing - Individual

SERFF Tracking #: MVPH-133660955

Dear Ms. Hughes:

This letter is in response to your correspondence received 06/27/23 regarding the above-mentioned rate filing. The responses to your questions are provided below.

1. Regarding the response to question #3 in objection letter 5: Please also provide the monthly counts COVID-19 testing utilization.

Response: Please see the table below for the number of COVID-19 tests. We have provided January 2021-February 2023 as of February 2023. This data is consistent with the data used to derive assumptions for the rate filing. Please note that there was no attempt to complete the number of claimants for the months without full runout. This should be taken into account when analyzing the results.

	Count of Claims
Incurred Month	Covid Testing
1/31/2021	1,754
2/28/2021	1,116
3/31/2021	981
4/30/2021	825
5/31/2021	399
6/30/2021	318
7/31/2021	409
8/31/2021	771
9/30/2021	925
10/31/2021	841
11/30/2021	1,098
12/31/2021	1,364
1/31/2022	1,280
2/28/2022	470
3/31/2022	416
4/30/2022	408
5/31/2022	473
6/30/2022	269
7/31/2022	246
8/31/2022	228
9/30/2022	241
10/31/2022	235
11/30/2022	230
12/31/2022	343
1/31/2023	183
2/28/2023	63

- 2. Regarding the administrative costs, please address the following:
 - a. The actual administrative costs in 2022 were \$48.26 PMPM compared to the proposed \$52.74 PMPM for 2024. This is equivalent to a 4.5% average annual increase from 2022 to 2024. What are the driver(s) of the increase to administrative costs PMPM?
 - b. We observed the largest increase from 2022 to 2024 is attributed to the "All Other Admin" expense category. What is included in this category? Please elaborate further and discuss the larger increase to within this expense category.

Response: The answer below was prepared by our Finance department.

- a. MVP, like other organizations in the US, has been affected by the tight labor market and has had to improve its compensation and benefit packages to attract and retain staff. According to various economic research, this tight US labor market was mainly caused by general declines in the labor force, primarily among older workers (ages 55+) who had left the workforce and women who have provided care for other family members. We are hopeful that these macroeconomic issues are resolving themselves so that future increases will be more in line with historical levels. Additionally, the COVID pandemic has required MVP to invest in more software technologies to support market expectations around new digital service capabilities.
- b. The "All Other" category encompasses bank fees, printing, postage, facility expense, telephones, insurance, and depreciation and many other smaller items. Within that grouping, one of the largest components to the increase in that category was Bank Fees, that have increased as a result of MVP assuming responsibility for functions previously performed by the State of Vermont.

If you have any questions or require any additional information, please contact me at cpontiff@mvphealthcare.com.

Sincerely,

Christopher Pontiff, FSA, MAAA

Re: 2024 Vermont Exchange Rate Filing - Individual

SERFF Tracking #: MVPH-133660955

Dear Ms. Hughes:

This letter is in response to your correspondence received 07/10/23 regarding the above-mentioned rate filing. The responses to your questions are provided below.

- 1. Using the FY2023 budget submission narratives posted on the GMCB website (https://gmcboard.vermont.gov/FY2024hospitalbudgets), please disclose and provide quantitative support for the impact to the rates if:
 - a. The unit cost trend was set equal to the budget increases submitted.
 - b. The unit cost trend was set equal to the budget increases submitted, reduced by 17%.

Response: MVP did not receive charge master increases in a clear format as was provided in prior years. It would be extremely helpful to receive a table with the Hospitals' proposed percent increases to perform the most accurate and consistent calculations. Without that information from the hospitals, we will likely need to make assumptions on medical trend and the overall requested rate increase. We were asked to derive this to the best of our ability, using guidance communicated by L&E, and the impact is quantified below. We used the NPSR and FPP figures provided on the GMCB website in our calculations in alignment with the guidance. MVP does not believe GPR and NPSR should be used in these calculations. In previous filings, charge master increases were used as the values and we continue to believe this is the best number. These derived trends are inconsistent with those in the posted narratives, which have historically reflected charge master increases. Considering the magnitude of the impact of these figures on the rate filing, we request that more information be made available, and that we are given the opportunity to provide updated estimates.

- a. The average rate increase is 16.63% under the proposed hospital budgets on the GMCB website. This is a 3.4% increase over the 12.76% average rate increase that MVP previously proposed. Please see the attached Excel document for quantitative support by hospital. Note that some portions of this response are confidential and will be provided under separate cover.
- b. The average rate increase is 15.43% under the proposed hospital budgets, reduced by 17%, on the GMCB website. This is a 2.4% increase over the 12.76% average rate increase that MVP previously proposed. Please see the attached Excel document for quantitative support by hospital. Note that some portions of this response are confidential and will be provided under separate cover.

If you have any questions or require any additional information, please contact me at cpontiff@mvphealthcare.com.

Sincerely,

Christopher Pontiff, FSA, MAAA

Re: 2024 Vermont Exchange Rate Filing - Individual

SERFF Tracking #: MVPH-133660955

Dear Ms. Hughes:

This letter is in response to your correspondence received 07/20/23 regarding the above-mentioned rate filing. The responses to your questions are provided below.

- 1. Please disclose and provide detailed quantitative and qualitative support for the impact of L&E's recommended CSR loads:
 - a. To the silver plans vs. all other plans, with no other assumption changes
 - b. To the silver plans vs. all other plans, with other assumption changes

Response: Please see the tab "Question #1" in the attached Excel document for the gross claim cost of each plan that was initially proposed and under the two scenarios above. Our calculations for both scenarios include increasing the on-exchange silver load to that recommended by L&E as well as shifting the current enrollment as assumed by L&E in their memo. The enrollment shifts do not impact the premium of any individual plan, just the distribution of members, which will affect the following stated rate changes. The impact of the recommended CSR loads with no other assumption changes is a 0.43% increase on the rate. The impact of the recommended CSR loads with other assumption changes is a 0.30% increase on the rate.

2. Please disclose, justify, and provide detailed quantitative and qualitative support for any other assumption changes made as a result of L&E recommended CSR loads.

Response: As a result of L&E's recommended CSR loads and membership shifts, we assumed that the index rate would decrease, which affects all plan premiums. Due to the Medicaid redetermination, L&E assumed 700 subsidized members would enroll in the 87 and 94 CSR levels of MVP's Silver 2 plan. This is a 6% increase in our membership. We calculated the member weighted average of the assumed AV*ID to be 0.91 for these members based on the same distribution of members at the 87 and 94 CSR levels in Silver 2 as of February 2023. However, we believe these members realize a lower AV than their CSR AV based on historical claims. MVP does not have risk adjustment readily available at the HIOS-16 level, which makes it difficult to see the actual performance of the CSR members relative to their CSR AV. We are assuming that these members perform at 98% of their AV. Therefore, the increase in AV*ID is not fully offset by the Increase in adjusted paid claim cost, leading to a reduction in the index rate. Please see the tab "Question #2" in the attached Excel document for further quantitative support.

3. Please provide a full rate sheet that reflects rates with the changes that L&E recommended for CSR loads, and associated assumption changes due to the CSR load changes, only (i.e., not reflecting any other L&E recommended changes for hospital budgets, risk adjustment, etc.).

Response: Please see the tab "Question #3" in the attached Excel document for the premium rates under L&E's recommendation with the associated assumption changes.

If you have any questions or require any additional information, please contact me at cpontiff@mvphealthcare.com.

Sincerely,

Christopher Pontiff, FSA, MAAA

Re: 2024 Vermont Exchange Rate Filing - Individual

SERFF Tracking #: MVPH-133660955

Dear Ms. Hughes:

This letter is in response to your correspondence received 07/26/23 regarding the above-mentioned rate filing. The responses to your questions are provided below.

1. Please disclose and provide quantitative support for the impact to the rates if: The unit cost trend was set equal to the charge increases in the table.

Response: The charge increases in the table result in a 3.0% higher average rate increase than the budget assumptions in MVP's initial filing. Please see the attached Excel document for quantitative support by hospital. Note that some portions of this response are confidential and will be provided under separate cover.

If you have any questions or require any additional information, please contact me at cpontiff@mvphealthcare.com.

Sincerely,

Christopher Pontiff, FSA, MAAA

(Jun Vant

Rating Area Data Collection

 $Specify \ the \ total \ number \ of \ Rating \ Areas \ in \ your \ State \ by \ selecting \ the \ Create \ Rating \ Areas \ button \ or \ Ctrl + Shift + R.$ Select only the Rating Areas you are offering plans within and add a factor for each area. To validate, select the Validate button or $\operatorname{Ctrl} + \operatorname{Shift} + \operatorname{I}$.

To finalize, select the Finalize button or Ctrl + Shift + F.

Rating Area **Rating Factor** Rating Area 1
